Non Return Valve EV-VF VigiFLAP

APPLICATIONS

The **VigiFLAP** is a non-return valve designed to prevent propagation of overpressure or flame front caused by an explosion downstream in vessels such as dust collectors, cyclones or filters into the piping system.

The valve is held open either by air flow or proprietary locking mechanism. As a result the VigiFLAP can be used to isolate either the inlet or outlet of a filter from explosion.

In the event of an explosion, the valve closes and locks preventing passage of the flame front (as required by NFPA regulations).

CERTIFICATIONS & STANDARDS

EN 16447
EN 15089
NFPA 69

STANDARD FEATURES

- **Body :** painted steel
- **100% stainless steel AISI 304**
- **Diameters : ø6" to ø52" / ø160 mm to ø1320 mm**
- **Gasket : EPDM (Silicone FDA 392°F/200°C option)**
- **Pressure drop :** Lower pressure drop with round domed flap

OPTIONAL FEATURES

The EM-NRV is 100% NFPA 69 compliant with the following optional features :

- **Body :** Galvanized steel
- **Body :** Stainless steel
- **Frame silicone FDA :** 392°F/200 °C
- Accumulated dust level : Dust level sensor to prevent dust accumulation
- Connection box installed on the body, according to the ATEX zone (opposite side of the locking mechanism)

NON DUST ACCUMULATION DESIGN

The alignment of the lower part of the vigiflap with the piping, allows the air flow to create a continuous self-cleaning, with low drop

LOW PRESSURE LOSS

Explosion Isolation Valve EV VigiFLAP

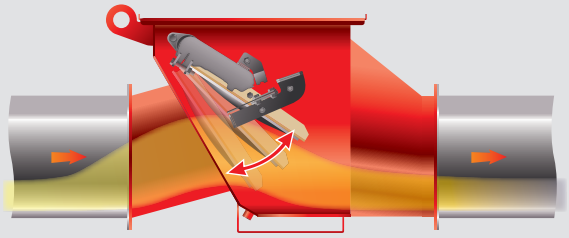
FLAP POSITIONS

FLOW PROCESS

POSIBLE POSITIONS DURING THE PRODUCT FLOW PROCESS :

1 Flap stay open by process flow

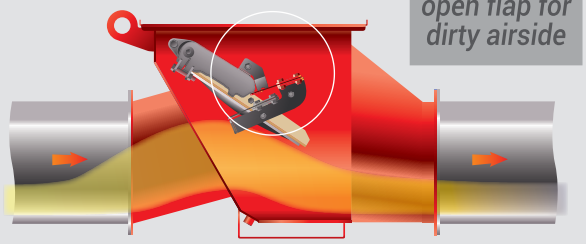
Installation with floating flap



or

Installation with locked open flap

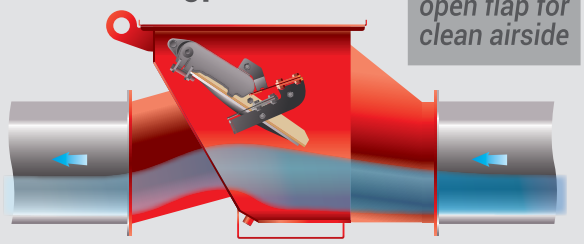
2 Flap locked in open position



Locked open flap for dirty airside

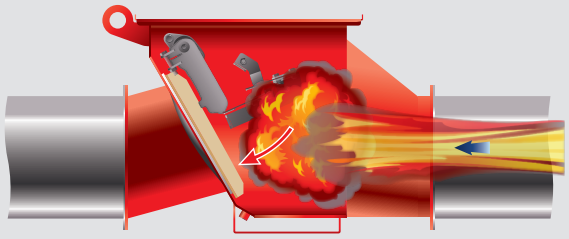
or

Locked open flap for clean airside



EXPLOSION EVENT

Flap open by process flow or locked



Flap is closed by an explosion and locked in place.
Reset by manually unlocking
