EXCEPTIONAL SEED. IT'S IN THE BAG.

CROPLAN®

High-performance genetics. Local seed seller expertise. Proven results across Canadian farms.

CROPLAN® seed brings together top-tier genetics, rigorous research, and the knowledge of local seed experts to help growers reduce risk and maximize yield potential, acre after acre.

From corn and canola to sunflowers, alfalfa, and soybeans, CROPLAN offers dependable performance designed for real-world Canadian growing conditions.

WHY GROWERS CHOOSE CROPLAN

PROVEN GENETICS

Consistent performance and strong return on investment start with the right genetics, selected through extensive research, testing, and development. CROPLAN hybrids and varieties deliver consistent yield potential and dependable results year after year, helping growers manage risk across diverse conditions while maximizing every acre.

PORTFOLIO BUILT FOR CANADIAN FARMS

Build a seed strategy tailored to your acres. CROPLAN combines a broad seed lineup designed to span crops, regions, and management styles with advanced seed treatments to help crops start strong and reach their full potential. With multiple hybrids and varieties available, there's a CROPLAN seed designed to perform in your region and conditions.

BACKED BY LOCAL EXPERTS

Local CROPLAN seed experts aren't just suppliers, they're your co-pilots in the field. Working closely with growers, they combine years of local experience with research data and field insights to recommend the right hybrids and varieties for your farm. From selecting the right genetics to planning your crop strategy, your local CROPLAN expert helps you set every acre up for success.

PLANT NOW. PAY LATER.

CROPLAN 0% Interest Program with Farm Credit Canada (FCC)

Through the CROPLAN Seed 0% Interest Program with FCC, growers can finance their seed purchases while preserving cash flow.

Program highlights:

- Order CROPLAN seed within the program dates
- 0% interest from disbursement until September 30
- Payment flexibility aligned with the growing season

This program helps growers manage input costs and improve cash flow while investing in high-performing seed.

LESS TALK. MORE YIELD POTENTIAL.

Some seed brands make noise. CROPLAN focuses on performance.

By relentlessly selecting top genetics, extensively testing products, and working closely with retail partners and growers, CROPLAN delivers seed solutions built to compete with, or outperform, the biggest names in the field.

Because when it comes to seed, yields speak louder than words.

RESEARCH THAT DRIVES RESULTS.

Every CROPLAN product is backed by extensive research and field testing. Through research sites across Canada and the Answer Plot® testing network, CROPLAN evaluates genetics in real-world environments to ensure strong performance across diverse conditions. This data-driven approach helps identify products that deliver yield consistency and dependable agronomic performance.

POWERED BY WINFIELD UNITED CANADA

CROPLAN is part of WinField® United Canada, a trusted partner to independent ag retailers across the country. Through hands-on agronomy, field trials, and data analysis, WinField United works to ensure only the strongest-performing genetics make it to market. But the impact goes beyond the field.

By supporting independent retailers and the growers they serve, WinField United helps build healthy, vibrant rural communities across Canada, strengthening local agriculture and the communities that depend on it.

ALFALFA

CROPLAN®

A VARIETY FOR EVERY FORAGE GOAL

Yield goals and forage quality both matter, and CROPLAN alfalfa rises to the challenge. Featuring modern trait advancements and proven seed treatments, it's a complete solution designed to deliver results.

FAST REGROWTH, HIGH YIELD POTENTIAL

STAFF PICK

CROPLAN **HVX MEGATRON** WEST EAST

Fall Dormancy: **4.2**
Winterhardiness: **1.7**

HARVXTRA with Roundup Ready® Technology

Characteristics (Fair – Excellent)

- Yield
- Persistence Index
- Feed Quality
- Grazing Tolerance
- Baled Hay (Drydown)
- Haylage (Regrowth)

- Excellent yield and forage quality potential with the HarvXtra® alfalfa trait.
- H2 feed quality rating; exceptional soil disease resistance to help improve root and plant health.
- Highest resistance (HR+) rating to multi-race aphanomyces root rot disease (Races 1, 2, and EMR); resistant (R) to multi-race anthracnose (including Race 5).
- Excellent quality and yield potential with a 3- to 5-cut flexible harvest system based on geography.
- Seed coating provides improved early season plant health.

HIGH-QUALITY, BALED HAY

CROPLAN **LEGENDAIRY AA** WEST EAST

Fall Dormancy: **3.4**
Winterhardiness: **1.1**

Characteristics (Fair – Excellent)

- Yield
- Persistence Index
- Feed Quality
- Grazing Tolerance
- Baled Hay (Drydown)
- Haylage (Regrowth)

- The latest generation of LegenDairy with the AA disease resistance package bringing yield potential to new levels.
- Highest resistance (HR+) rating to multi-race aphanomyces and anthracnose disease (including Race 5).
- Excellent choice for producers in northern growing regions east to west with second to none winterhardiness; ideal for baled hay or haylage harvest system.
- Great choice for producers who prefer mixed alfalfa-grass stands.
- Seed coating provides improved early season plant health.

HIGH PERFORMANCE, HIGH YIELD

CROPLAN **REBOUND AA** WEST EAST

Fall Dormancy: **4.4**
Winterhardiness: **1.7**

Characteristics (Fair – Excellent)

- Yield
- Persistence Index
- Feed Quality
- Grazing Tolerance
- Baled Hay (Drydown)
- Haylage (Regrowth)

- Packs a punch with the AA disease resistance package, providing exceptional yield potential.
- Highest resistance (HR+) rating to multi-race aphanomyces and anthracnose disease (including Race 5).
- Growth starts very early in the spring; rapid regrowth after each cutting with superior stand persistence.
- Best suited for 4- to 5-cut haylage or aggressive hay management systems.
- Seed coating provides improved early season plant health.

CROPLAN AA Alfalfa Lineup
Use smartphone camera to scan code

COVERING YOUR AA

CROPLAN AA varieties have superior levels of resistance to multiple races of anthracnose and aphanomyces root rot.

WHY DISEASE RESISTANCE MATTERS

- STRONGER SEEDLINGS
- HEALTHIER ROOTS
- BIGGER PLANTS
- HIGHER YIELD AND FEED QUALITY POTENTIAL
- INCREASED STAND PERSISTENCE
- INCREASED NET RETURN PER ACRE

STAFF PICK

HVX MEGATRON

WEST EAST

This Roundup Ready® alfalfa is an absolute stand out! With its Roundup Ready technology, fast regrowth giving you four to five cuts per season, and excellent feed quality, it is a top-tier choice. Additionally, it has high resistance against diseases like phytophthora root rot and aphanomyces root rot, helping protect yield potential across varying field conditions.

Emily Fuller
Sales Agronomist
South/Central Ontario

KEY

Scale
1 = Excellent
2 = Above average
3 = Average
4 = Below average
5 = Fair

Product descriptions and ratings are generated from Answer Plot trials and/or from the genetics supplier and may change as additional data is gathered.

Resistance Ratings
S = Susceptible (0–5%)
LR = Low resistance (6–14%)
MR = Moderate resistance (15–30%)
R = Resistance (31–51%)
HR = High resistance (>50%)
HR+ = Highest resistance available on the market (>50%)

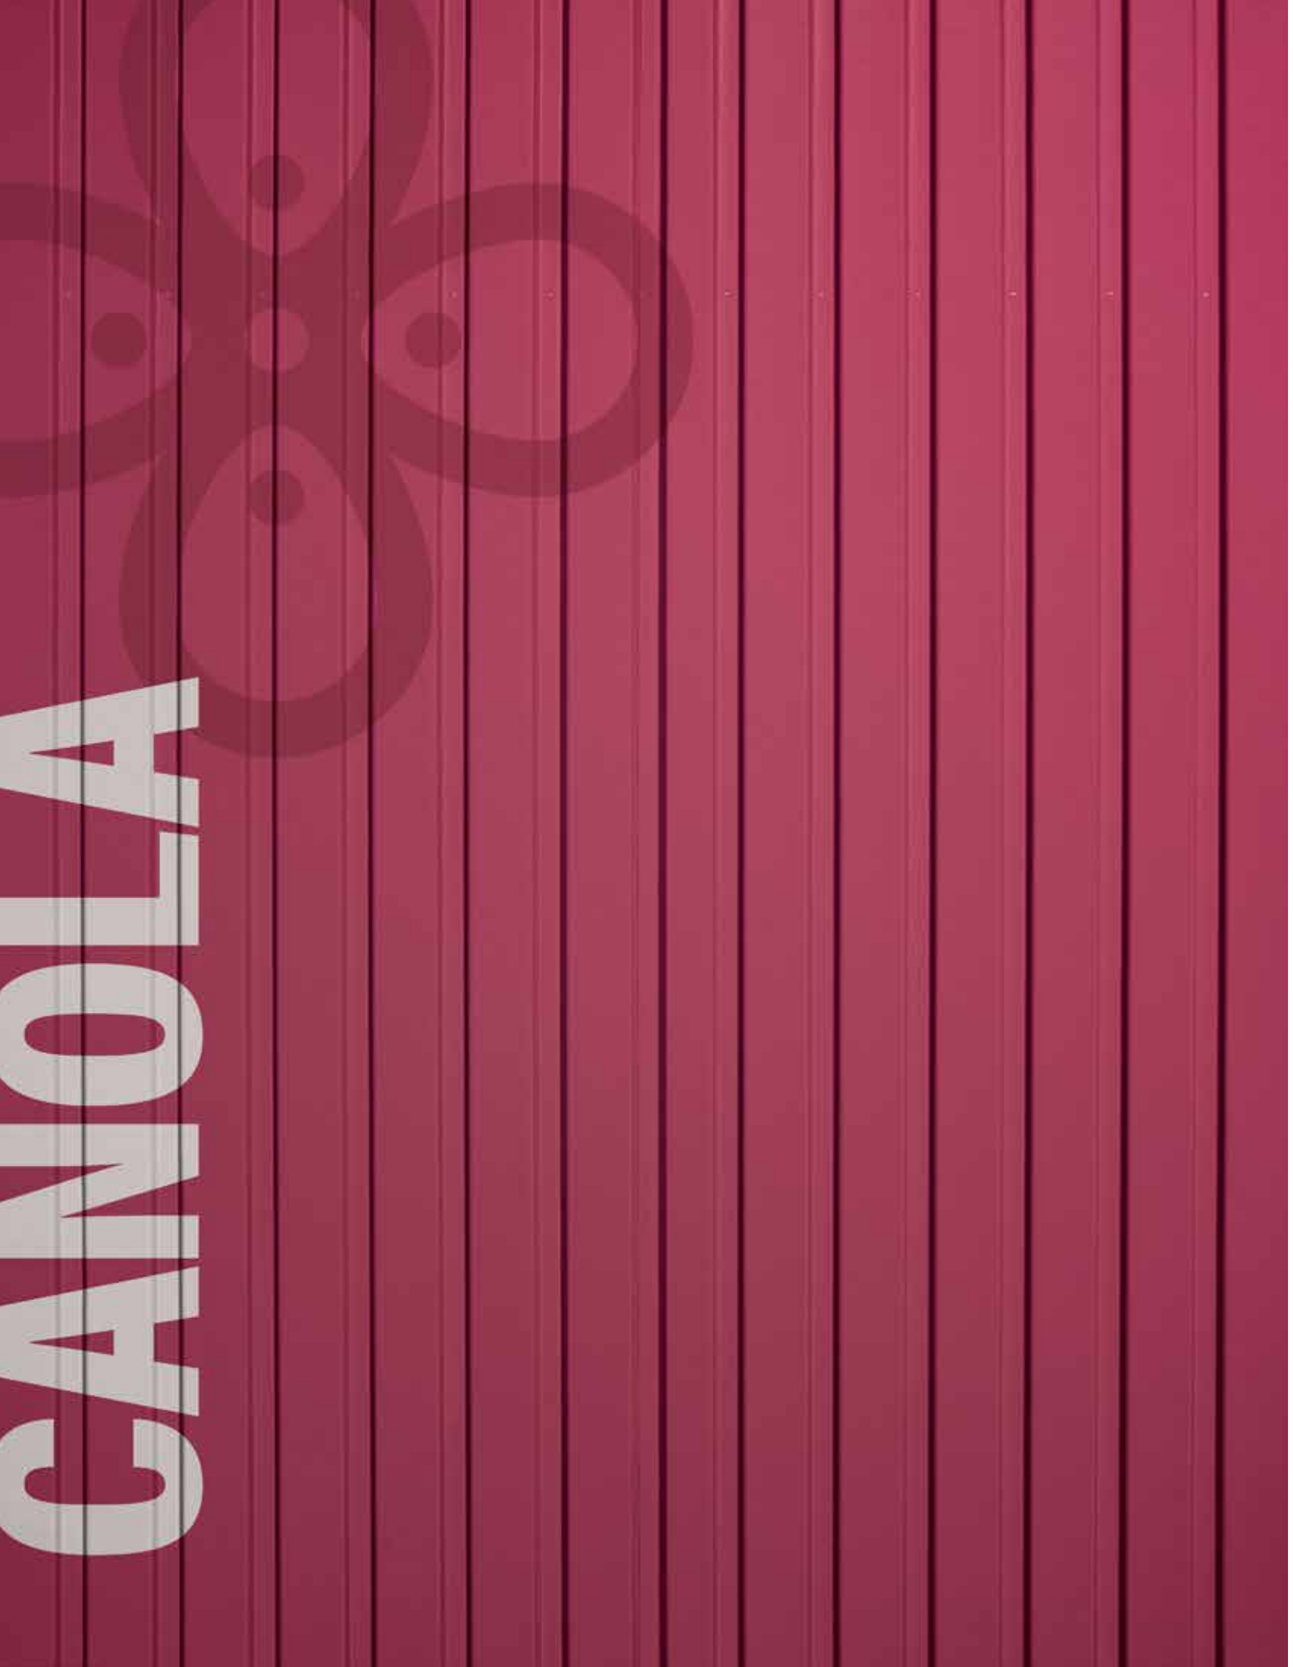
1 Fall Dormancy
A higher FD number = higher yield potential
More dormant = better forage quality

2 Winterhardiness
A lower WH number = more cold tolerance and stand persistence

3 Feed Quality Index
Feed quality ratings for HarvXtra® are represented on a separate scale than Roundup Ready® and conventional alfalfa varieties and are signified with an "H." Because there is a significant improvement in forage quality, HarvXtra alfalfa products can only be compared to other HarvXtra alfalfa products.

4 Salt Germination Tolerance
G = Variety tolerance for germination under high saline conditions in petri dish tests
F = Variety tolerance for forage growth under high saline conditions as a potted plant in the greenhouse

Note: Field tests are currently being used to select and validate true salt-tolerant varieties. Many soils that are high in salinity also have other problematic conditions. Therefore, germination and forage salt-tolerant ratings may not predict field performance.



CROPLAN®

STRENGTH YOU CAN COUNT ON

Setting your canola crop up for success starts with choosing a hybrid that doesn't compromise. Whether you need proven pod shatter strength to stand up to Prairie winds or an early-maturing option built for northern acres, we've got you covered. These hybrids go beyond yield, delivering strong disease protection against key threats and offering true herbicide rotation flexibility across all three major trait platforms. Take a closer look at CROPLAN canola—built for growers who prefer to do things their own way, and do them well.

WELCOME

LETTER FROM OUR GENERAL MANAGER

Dave Van Dam

WinField United Canada is excited to share that we continue to expand our CROPLAN canola portfolio, welcoming three trusted Corteva Agriscience™ canola hybrids into the CROPLAN family. These trusted and proven genetics will continue to be available through CROPLAN for the 2027 growing season, being marketed as:

CP23L3C FORMERLY B3020 | **CP26L2P** FORMERLY B3060 | **CP26O3C** FORMERLY B4022

CROPLAN is an established seed brand, with a history spanning 30 years across North America. The brand has a trusted reputation, and its future is bright as it continues to expand. These hybrids are well known on Canadian farms. Bringing them into the CROPLAN portfolio strengthens the brand's trust, offers consistency for growers, and sharpens our focus on delivering proven genetics through one trusted brand. It also demonstrates our ongoing commitment to independent ag retailers across Canada.

We take a data-driven approach ensuring that every seed recommendation is backed by real-world insights including from Answer Plot. CROPLAN canola, like all CROPLAN seed, is about more than genetics—it's about understanding how those genetics respond to your specific environment, management practices, and goals.

The best decision we make each season is to entrust our success, and yours, to local independent ag retail experts. When it comes to seed expertise and local field knowledge, they continually raise the bar. No one can interpret all the data available and make custom recommendations with a "focused on you" approach like independent ag retail experts can. They're by your side all season long so you can be even more confident in your CROPLAN seed decision.

At WinField United Canada, every decision we make is in service of bringing you the best products possible. CROPLAN has an exciting future with the growth of its canola offerings, providing more choices for independent ag retailers and their growers. A successful 2027 season starts here.

UNDERSTANDING THE CROPLAN CANOLA HYBRID NAMING SYSTEM

EXAMPLE **CP26L2P**

CP	The brand prefix for CROPLAN.
26	The year the hybrid was first introduced. Allows you to quickly identify how long the hybrid has been in market.
L	The herbicide/trait system. (T = TruFlex® Canola | L = LibertyLink® | O = Optimum® Gly)
2	Maturity rating (1 = Early | 3 = Mid | 5 = Long)
P	Specific agronomic characteristics the hybrid represents. The hybrid may have several agronomic traits, however this letter highlights the key attribute. (C = Clubroot Resistant | P = Pod Integrity)

Introducing NEW Curanza seed treatment

When every bushel matters, start with even better flea beetle control.

With the highest available rate of the trusted active ingredient cyantraniliprole, Curanza™ delivers superior and long-lasting flea beetle and cutworm control, so you can rest assured your canola seed investment is protected.

Curanza outperforms the market leader, with proven side-by-side results
- more plants, less flea beetle damage, and cutworm protection built right in.[1, 2]

Curanza™ syngenta

[1] Source: Syngenta CPD small plot trials, Saskatchewan and Manitoba, 2023-2025. (n = 18)

[2] Source: # of plants per 6m row, 6.7 DAE. Syngenta CPD small plot trials, Saskatchewan and Manitoba, 2023-2025. (n = 18)

Performance evaluations are based on internal trials, field observations and/or public information. Data from multiple locations and years should be consulted whenever possible. Individual results may vary depending on local growing, soil, and weather conditions.

NOTES:

CORN

CROPLAN

MORE THOUGHT.
MORE DATA.
MORE THAN SEED.

Top-tier genetics are the price of entry in corn. CROPLAN hybrids don't stop there. We go deeper—way deeper. With over a decade of Answer Plot and trial data behind every hybrid, growers get clear response-to insights that map out the right plant population, nitrogen rates, and fungicide approach for each one.

And because strong starts matter, zinc seed treatment comes standard on every CROPLAN corn hybrid, with no upcharge. We're the only brand doing that. Put it all together and you get a hybrid package that doesn't just perform better—it exists in a category all on its own.

**LOOKING FOR DUAL PURPOSE OR SILAGE VARIETIES?
FLIP TO PAGE 34**

LEAVE AVERAGE IN THE DUST

CROPLAN seed uses the latest data to recommend which hybrids to choose and where to place them to get optimal bang for your buck.

GET AN EARLY-SEASON EDGE WITH ZINC

CROPLAN is the only seed brand to offer zinc as a standard treatment on all commercial hybrids to promote early-season growth and root development. Applied on-seed, zinc naturally enhances corn seeds by improving early seedling vigour and growth. Zinc seed treatment helps promote quicker emergence — even in cool, wet conditions — to help establish strong, healthy stands.

CROPLAN Precise Plateless (CPP)	30-33.9
CROPLAN Precise Flats (CPF)	34-43.9
CROPLAN Precise Rounds (CPR)	34-47.9
CROPLAN Precise Flats 2 (CPF2)	44-62.0
CROPLAN Precise Rounds 2 (CPR2)	48-68.0

1. Kernel count is 80,000 for all seed sizes.

Please use CPF, CPR, CPF2 or CPR2 for plated planters.

- C-Box = 50 units, except CPF2 and CPR2 seed sizes where C-Box can be 40-45 units.

STAFF PICK

CP3790VT2P

WEST EAST

This corn variety is making waves—delivering top-end yield potential where it counts most. Built for highly productive soils, it consistently outperforms in the field and pushes the boundaries of what's possible.

Matt Thrower
Regional Business Lead
Eastern Canada

RESPONSE-TO SCORES

Get the right tools to make the best agronomic decisions for your corn crop. We use the latest technology to help determine which nutrients and crop protection products make the most sense for your acres and hybrids.

Our response-to scores offer an analytical evaluation of variables that a grower can influence. These ratings provide an understanding supported by data and analytics of how each hybrid responds to these key variables: plant population, nitrogen management, and fungicide usage.

WINFIELD UNITED

PLANT POPULATION

RESPONSE-TO POPULATION RANGE:
0.15 TO 20.3 BUSHELS[1]

HYBRID PERFORMANCE AT DIFFERENT POPULATIONS

Response-to population (RTP) is an indicator of the hybrid's response to stress. Root, stalk, and ear flex are major factors. The higher you push planting populations, the more stress on the hybrid due to competition for nutrients, moisture, light, etc.

HYBRID POPULATION COMPARISON

Planting each hybrid at the right population is key to optimizing its performance potential. In the example below, note the ear flex and decrease in root size and stalk diameter when the hybrid has a low RTP. With the higher RTP characteristics and more fixed-ear hybrids, the hybrid with a high RTP maintains root diameter at higher plant densities.

HIGH RTP SCORE

- Hybrid shows a potential yield gain with increasing populations
- Can be fixed-ear type hybrid
- Good plant integrity
- Strong pollination, dependable grain fill
- Overall good stress tolerance (nutrients and/or moisture) at high populations

MEDIUM RTP SCORE

- Hybrid is able to achieve high yields at moderately high populations
- Maintains yield at moderately low populations

LOW RTP SCORE

- Flex-ear-type hybrid with acceptable yield potential, even at low populations for a particular area
- Could be driven by low moisture or low nutrient stress tolerance at high populations
- Root and plant size decrease as population increases
- Development of smaller ears to ensure good grain fill
- May not tolerate increased stress at higher populations

LOW RTP HYBRID 24,000 30,000 36,000 42,000

HIGH RTP HYBRID 24,000 30,000 36,000 42,000

NITROGEN MANAGEMENT

MANAGE ACCORDING TO RTN RATING:
26.1 BU/AC AVERAGE YIELD ADVANTAGE[1]

HYBRID PERFORMANCE AT DIFFERENT N RATES

Be sure to consider the response-to nitrogen (RTN) scores of the hybrids you choose. Select hybrids with high RTN scores if you are planning to apply additional or late-season nitrogen, and hybrids with moderate or low scores for limited nitrogen exposure. Perform appropriate tissue testing to determine optimal application timing for nitrogen, which may help minimize the financial and environmental costs of applying too much.

HIGH RTN SCORE

- Respond to aggressive N rates
- Place in fields with history of manure
- Good fit for a legume rotation

MEDIUM RTN SCORE

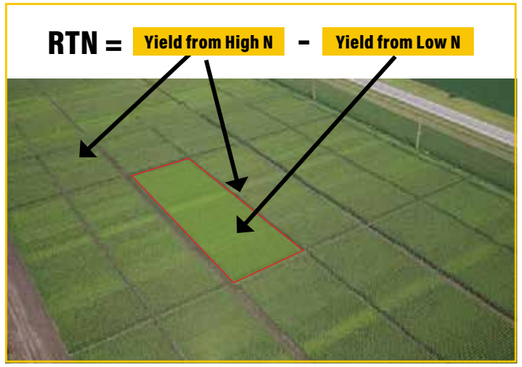
- Respond well to high N fertility environments
- Don't require as high of N rates to remain productive
- Tend to be consistent performers in many different N environments

LOW RTN SCORE

- Tolerate stresses of less than optimal N rates better than other hybrids
- Utilize N more efficiently (early flowering, internal physiology, etc.)
- Can find more N from the soil (deep penetrating or large root system)
- Add stability in continuous-corn rotations

HOW TO USE RTN AND RTP

RTN and RTP scores can help you better manage individual fields and maximize productivity. Response-to scores allow us to better select the right product for your farm. Talk to your local CROPLAN distributor or WinField United representative for more information.



[1] Response ranges and averages show the importance of how hybrids respond to each management practice to help ensure the highest yield potential. 2022 Answer Plot data from 178 locations. Due to factors outside of WinField United's control, such as weather, product application and any other factors, results to be obtained, including but not limited to yields, financial performance or profits, cannot be predicted or guaranteed by WinField United.

Sales Agronomist Lead

FUNGICIDE USAGE

MANAGE ACCORDING TO RTF RATING:
19 BU/AC AVERAGE YIELD ADVANTAGE[1]

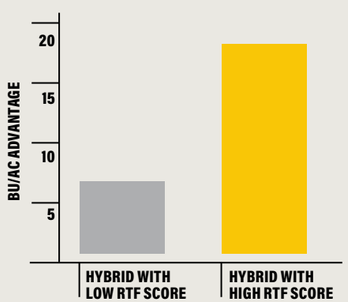
HYBRID PERFORMANCE AND FUNGICIDE APPLICATION

Response-to fungicide (RTF) considers a hybrid's response to fungicides, even in the absence of disease pressure. RTF scores help determine where a fungicide may increase yield potential.

LATE-SEASON FUNGICIDE TREATMENTS

- Under heavy disease pressure, split fungicide applications made during the V5 to V6 stage and around tasseling to R1 have been shown to be effective in preserving yield potential.
- Late-season fungicide treatments can be especially beneficial when applied to hybrids in corn-on-corn rotations.
- Thorough coverage is essential. Use plenty of water and be sure to select the right nozzle. Use a LockTech® product like MasterLock® or StrikeLock® to minimize drift.
- Fungicide use can improve standability, leading to improved harvestability.

BU/AC ADVANTAGE COMPARED TO UNTREATED CHECK



6.96 BU/AC ADVANTAGE

18.52 BU/AC ADVANTAGE

HIGH RTF SCORE

- Potential for high economic gain when a fungicide is used
- Great for productive fields with strong yield potential
- Potential for positive ROI even in the absence of disease

MEDIUM RTF SCORE

- Potential for good economic gain when a fungicide is used
- Place hybrid in productive or moderately productive fields
- Scout fields in season. If disease pressure is high a fungicide may provide a strong ROI

LOW RTF SCORE

- Lower potential for ROI on fungicide applications
- Hybrid maintains yield in lower productive areas where disease pressure is low to moderate
- Always scout in season to evaluate disease pressure regardless of response-to fungicide score

MasterLock® By WinField United

When you invest in a fungicide application, ensure you're maximizing its disease control potential by adding MasterLock to the tank whenever a non-ionic surfactant is required. MasterLock combines best-in-class drift control and DropTight® Technology – a next generation surfactant – to help cover more leaf surface area and ensure more product penetrates the canopy. WinField United Answer Plot data has shown a 5.7 bu/ac average yield increase in corn when MasterLock is added to the fungicide application.

[1] Response ranges and averages show the importance of how hybrids respond to each management practice to help ensure the highest yield potential. 2022 Answer Plot data from 178 locations. Due to factors outside of WinField United's control, such as weather, product application and any other factors, results to be obtained, including but not limited to yields, financial performance or profits, cannot be predicted or guaranteed by WinField United.

CROPLAN TRAIT LETTERING FOR CORN HYBRIDS

Descriptive hybrid numbering and trait lettering systems are used for CROPLAN corn hybrids.

KEY	HYBRID	TRAIT	ABOVE/BELOW GROUND	LOGO
RR	Roundup Ready® Corn 2; RR2	Roundup Ready Corn 2 enables consistent field-to-field weed control. Engineered for glyphosate tolerance, this technology allows you to apply Roundup® brand agricultural herbicides and other labeled glyphosate products.	Neither	
VT4P/RIB	VT4PRO® RIB Complete® Corn Blend	For corn-on-corn acres, or those with corn rootworm damage, VT4PRO Technology combines the three built-in modes of action in Trecepta® Technology, with two below-ground modes of action to help manage corn rootworm. VT4PRO Technology will provide farmers protection against above-ground pests including European corn borer, fall armyworm, and western bean cutworm. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the corn-growing area is easier than ever.	Above and below ground/western bean cutworm and earworm	
VT2P/RIB	VT Double PRO® RIB Complete® Corn Blend	For rotated acres with no visible corn rootworm, and low to moderate risk. Dual modes of action for maximum protection against above-ground pests, like European corn borer and fall armyworm. As a RIB Complete® brand corn blend, refuge compliance for the corn-growing area is easier than ever.	Above ground	
SS/RIB	SmartStax® RIB Complete® Corn Blend	Two modes of action working against corn rootworm for below ground protection. As a RIB Complete® brand corn blend, refuge compliance for the corn-growing area is easier than ever. Two more sites of action provide tolerance to glyphosate and glufosinate herbicide applications.	Above and below ground	
SSPRO/RIB	SmartStax® PRO RIB Complete® Corn Blend	For corn-on-corn acres, or those with corn rootworm damage, SmartStax® PRO technology contains three different modes of action against corn rootworm. SmartStax® PRO Technology combines the proven benefits of SmartStax® Technology with an additional, unique RNAi-based mode of action — becoming the first product with three modes of action for corn rootworm control. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the corn-growing area is easier than ever.	Above and below ground	
TRE/RIB	Trecepta® RIB Complete® Corn Blend	For rotated acres with no visible corn rootworm, and low to moderate risk. Trecepta Technology helps reduce yield loss by protecting your corn crop from a wide range of above-ground pests. Built on the proven VT Double PRO Technology, Trecepta Technology gives you more complete control against corn borers (European and southwestern), fall armyworm, western bean cutworm, black cutworm, and corn earworm. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the corn-growing area is easier than ever.	Above ground/ western bean cutworm	
PCE	PowerCore® Enlist® Refuge Advanced® Corn Blend	Herbicide flexibility with the Enlist® weed control system, which offers tolerance to 2,4-D choline in Enlist® herbicides in addition to glufosinate and glyphosate. Insect control against fall armyworm, European corn borers, and corn earworm.	Above ground

Chris Roy
Account Manager
Southwestern Ontario

My staff pick this year was the new CP4689PCE. We were really pleased with how it performed from start to finish. It also handled higher populations well and stayed healthy all season. At harvest, it finished strong with good ear size, solid test-weight, and nice drydown. Overall, CP4689PCE is a tough, dependable hybrid with the yield potential to compete.

W = Western Hybrid | **E** = Eastern Hybrid

Product descriptions and ratings are generated from Answer Plot trials and/or from the genetics supplier and may change as additional data is gathered.

1 RTP/RTN/RTF Ratings
- **L** = Low response
- **M** = Moderate response
- **H** = High response
- **TBD** = To be tested in 2027.

2 Plant Height
- **T** = Tall
- **M** = Medium
- **S** = Short

3 Ear Height
- **H** = High
- **M** = Medium
- **L** = Low

4 Ear Flex
- **FL** = Flex
- **SF** = Semi-flex
- **FX** = Fixed

5 Flower Date
- **L** = Late
- **M** = Medium
- **E** = Early

6 Staygreen
Late-season health coming from strong leaf-disease resistance, enhancing hybrid standability.

Insect Resistance Management
Planting Refuges, Preserving Technology

*Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management,** for the biotechnology traits expressed in the seed as set forth in the Bayer Technology Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.

CORN SILAGE

CROPLAN

BUILT FOR PERFORMANCE FROM FIELD TO FEED BUNK

CROPLAN corn silage brands are selected to deliver impressive performance where it counts. With a strong balance of yield potential and feed quality, these hybrids are designed to help maximize forage value and animal performance. Backed by field testing and proven results, CROPLAN corn silage gives farmers confidence throughout the growing season. When productivity and reliability matter, CROPLAN silage hybrids rise to the occasion.

LOOKING FOR GRAIN CORN VARIETIES? FLIP TO PAGE 18

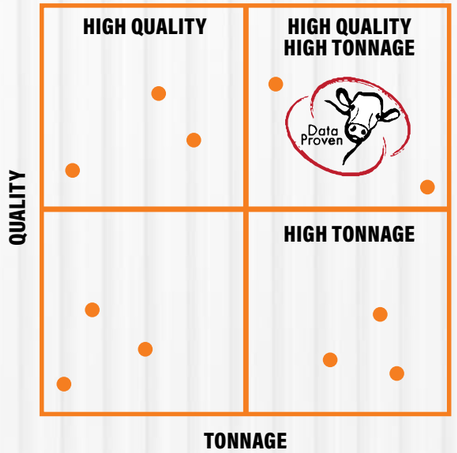
SILAGE PRODUCTS PROVEN BY DATA

Choosing the right corn silage hybrid is all about striking the ideal balance between tonnage and feed quality. CROPLAN corn silage hybrids are designed to support high producing dairy and beef cattle while giving you the tonnage you need. The scatter graph below illustrates yield as tonnage per acre on the horizontal axis and milk per ton as quality on the vertical axis. The lines through the centre represent the trial average.

- Each year, replicated corn silage trials are planted in select Canadian sites, in addition to the Answer Plot locations. After harvest, data is compiled and summarized over multiple years and locations to provide a performance snapshot.
- Summary data is compiled and computed using the University of Wisconsin MILK2006 milk-per-ton value, then plotted on a scatter graph to show the relationship between quality and tonnage potential for each hybrid.
- For most operations, selection will be based on hybrids in the high-quality, high-tonnage quadrant to ensure optimal production potential.
- CROPLAN corn silage hybrids that consistently perform in this high-quality and high-tonnage quadrant are marked with the Data Proven logo.

WANT A HYBRID THAT IS TRULY SILAGE SPECIFIC?

Look for the **SilageFirst** check mark in the chart on page 41.



SATISFY YOUR NUTRITION NEEDS

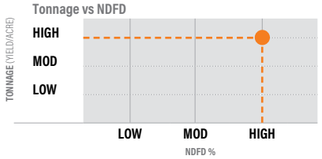
Your nutritionist can determine the parameters for nutrient needs and, leveraging data, your WinField United representative or local CROPLAN distributor can help to position each hybrid for optimal performance based on multiple variables.

CP1440VT2P/RIB*

CROPLAN · WEST EAST · Data Proven

Dual-Purpose 76 Day
1950 Silage CHU

VTDoublePRO RIB COMPLETE



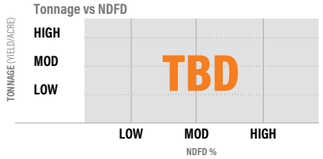
- Great early option.
- Works well across most environments.
- Attractive plant type with solid agronomic package.
- Excellent staygreen for wider silage window.

CP2130VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 81 Day
2200 Silage CHU

VTDoublePRO RIB COMPLETE



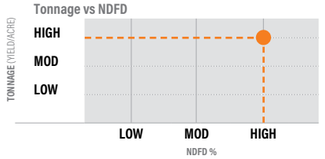
- Solid early season hybrid for dual-purpose silage.
- Excellent staygreen for wider silage window.
- Above average drought tolerance for increased quality consistency.
- Excels in high yielding environments.

CP2288VT2P/RIB*

CROPLAN · WEST EAST · Data Proven

Dual-Purpose 82 Day
2300 Silage CHU

VTDoublePRO RIB COMPLETE



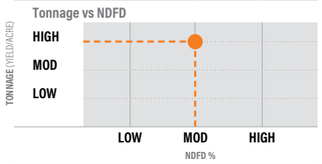
- Excellent emergence and seedling vigour.
- Consistent yield potential with excellent vigour.
- Girthy ear with good tip fill for clean quality silage.
- Handles tough, variable yield environments.

CP2324VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 84 Day
2350 Silage CHU

VTDoublePRO RIB COMPLETE



- Dual-purpose silage with high tonnage potential.
- Take advantage of ear flex for maximum quality potential.
- Good plant health and staygreen for high quality silage.
- Very good drought stress tolerance.

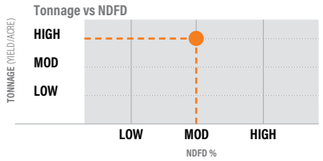
STAFF PICK

CP2790VT2P/RIB*

CROPLAN · WEST EAST · Data Proven

Dual-Purpose 87 Day
VT2P: 2500 Silage CHU
CONV: 2475 Silage CHU

VTDoublePRO RIB COMPLETE · CONVENTIONAL



- Excellent on low to medium yield environments.
- Strong ear flex with a moderate response-to nitrogen; broad range of growing conditions.
- Excellent seedling vigour for early planting.
- Above average drought tolerance.

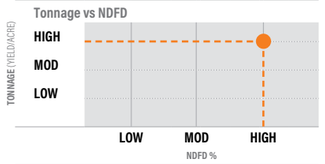
SILAGEFIRST

CP2732SRR

CROPLAN · WEST EAST

Leafy 87 Day
2650 Silage CHU

Roundup Ready 2 CORN



- SilageFirst floury-leafy proven hybrid.
- 25% floury kernels when self-pollinated for optimum digestibility.
- Strong performance in both tonnage and quality.
- To achieve optimal quality, target 30,000 plants per acre.

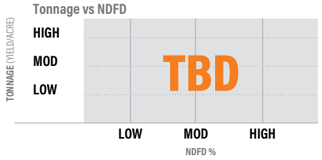
CP3143VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 91 Day
2625 Silage CHU

VTDoublePRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- 91-day dual-purpose silage.
- Very good staygreen for larger silage window.
- Good disease package for high quality silage.
- High response-to nitrogen; place on fertile soils for maximum potential.

NEW

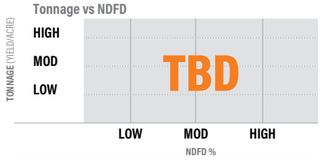
CP3255SSPRO/RIB*

CROPLAN · WEST EAST

Dual-Purpose 92 Day
2650 Silage CHU

SmartStaX PRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Great characteristics for silage.
- Highest below ground protection for corn-on-corn silage acres.
- Great late-season health for a wider silage window.
- Excellent grain quality for starch availability.

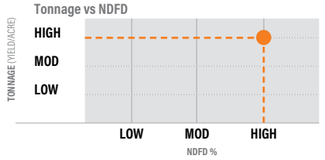
CP3490VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 94 Day
2650 Silage CHU

VTDoublePRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Consistent tonnage; stability across wide range of environments.
- Strong roots deliver strong drought tolerance and performance in poor soils.
- Semi-flex ear and strong stalks.
- Harvest timely because staygreen is below average.

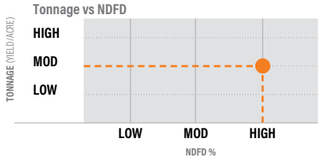
CP3575VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 95 Day
VT2P: 2675 Silage CHU
CONV: 2650 Silage CHU
SS: 2700 Silage CHU

VTDoublePRO RIB COMPLETE · CONVENTIONAL · SmartStaX RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Excels in moderate to high yield environments; moves across all soil types.
- Strong stalk quality and root strength.
- Has good ear flex for low plant densities, but will respond to higher management.
- Low response-to fungicide; may respond in heavy gray leaf spot situations.

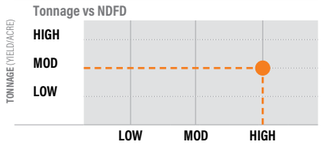
CP3715SSPRO/RIB*

CROPLAN · WEST EAST

Dual-Purpose 97 Day
2800 Silage CHU

SmartStaX PRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Versatile SmartStax® PRO hybrid for known corn root worm acres.
- Strong stress tolerance and solid agronomics.
- A moderate response-to nitrogen score; does not need aggressive nitrogen management to thrive.
- Manage in areas where gray leaf spot is a concern.

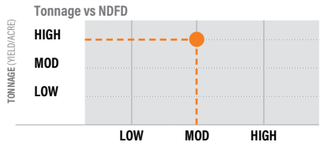
CP3790VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 97 Day
2775 Silage CHU

VTDoublePRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Excellent tonnage potential.
- Strong emergence and stalks.
- Great flex ear and strong drought tolerance.
- Keep populations low to optimize root development.

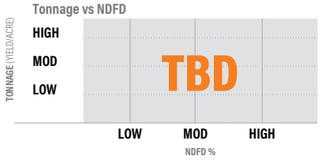
CP3823SS/RIB*

CROPLAN · WEST EAST

Dual-Purpose 98 Day
2775 Silage CHU

SmartStaX RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Tall, robust plant suitable for silage.
- Semi-flex hybrid with excellent stalks for higher plant populations.
- Above and below ground insect protection for corn-on-corn silage acres.

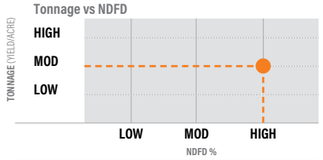
CP3980VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 99 Day
2800 Silage CHU

VTDoublePRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Tall hybrid with strong grain yield potential to drive high tonnage potential.
- Excellent roots and good drought tolerance; high seeding rates and high tonnage.
- Moderate response-to nitrogen; consistent performance across variable soils.
- Harvest timely to avoid excess drydown.

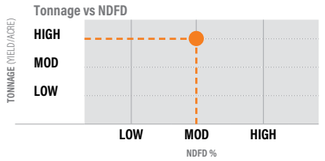
CP4188VT2P/RIB*

CROPLAN · WEST EAST

Dual-Purpose 101 Day
VT2P: 2850 Silage CHU
CONV: 2800 Silage CHU
SS: 2875 Silage CHU

VTDoublePRO RIB COMPLETE · CONVENTIONAL · SmartStaX RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Attractive plant type with solid agronomic package.
- Semi-flex ear allows lower densities, but will respond when pushed in populations.
- Handles tough, variable, and ideal yield environments.
- Healthy, versatile, high tonnage dual-purpose hybrid.

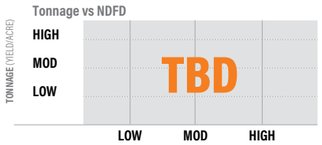
CP4377TRE/RIB*

CROPLAN · WEST EAST

Dual-Purpose 103 Day
2950 Silage CHU

Trecepta RIB COMPLETE CORN

Tonnage vs NDFD



Characteristics

- Medium-tall plant height with nice yield for high NDFD potential.
- Handles a range of soil types.
- Very good late-season stress tolerance for maximum potential.
- Excellent emergence and vigour for early planting.

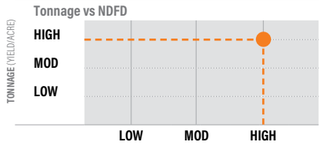
CP4676SS/RIB*

CROPLAN · WEST EAST

Dual-Purpose 106 Day
3025 Silage CHU

SmartStaX RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Versatile hybrid; position and manage for high yield.
- Medium height hybrid with excellent emergence, seedling vigour, and test weight.
- Position at medium populations and manage nitrogen for high yield potential.
- Fungicide application recommended in areas with gray leaf spot pressure.

NEW

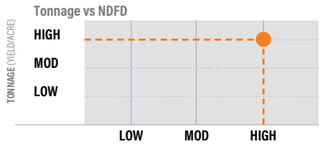
CP4689PCE RE

CROPLAN · WEST EAST

Dual-Purpose 106 Day
3100 Silage CHU

POWERCORE Enlist REFUGE ADVANCED

Tonnage vs NDFD



Characteristics

- Potential dual-purpose for silage.
- Tall plant stature for highest tonnage potential.
- Excellent staygreen for large planting window.
- Early season vigour for tougher conditions.

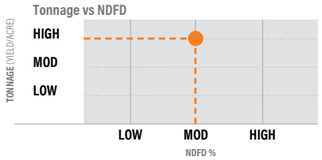
STAFF PICK

CROPLAN **CP4757VT2P/RIB*** WEST EAST

Dual-Purpose 107 Day
3050 Silage CHU

VTDoublePRO RIB COMPLETE

Tonnage vs NDFD



Characteristics

- Great tonnage hybrid, combined with high quality potential.
- Strong roots and test-weight with high yield potential.
- Versatile hybrid for any management system.
- Best suited for rotated acres.

NOTES:

STAFF PICKS

CP2790VT2P

WEST EAST

Dana Hill
Market Development Manager | Manitoba

This is a heat-loving hybrid suitable for the high heat unit areas of the Prairies. Combining exceptional feed quality and early season vigour, on high productivity acres CP2790 is the hybrid to maximize feeding efficiency on your operation in 2027.

For more information on this product, visit page 37.

CP4757VT2P

WEST EAST

Josh Moffatt
Account Manager
Ontario

In my experience, no other dual-purpose hybrid comes close—CP4757VT2P consistently delivers more tons per acre. The cows go crazy for it, and come fall, it's a standout choice for high-moisture corn every time.

For more information on this product, visit page 40.

Insect Resistance Management — Planting Refuges, Preserving Technology

*Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management,** for the biotechnology traits expressed in the seed as set forth in the Bayer Technology Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.

CHOOSING THE RIGHT ABOVE- AND BELOW-GROUND TRAIT PACKAGE FOR CORN

Selecting the most effective trait package for your corn hybrid requires a thorough understanding of pest pressures, field history, and long-term agronomic goals. One of the most persistent and economically damaging threats to corn production is corn rootworm. As this pest continues to evolve, choosing the right combination of traits is essential to safeguard yield potential and maintain sustainable management practices.

ROOTWORM

Rootworm has been a growing concern, and understanding the signs of pressure and what tools are available to meet your specific needs are important to understand before choosing a trait package. Continuous corn rotations are at higher risk for rootworm, and we can see rootworm larvae feed on corn roots. This causes stunting and goose necking (lodging), therefore reducing yield potential significantly. We offer three primary options to choose from when selecting a hybrid with below ground rootworm control.

Over the past decade, **SmartStax®** corn has set the standard in rootworm protection. Offering multiple modes of action for both above and below ground insect control, SmartStax corn has delivered consistent performance in fields with high pest pressure. Building on this success, **SmartStax® PRO** corn was introduced with an advanced trait stack that includes a new mode of action using RNA interference (RNAi) technology. This innovative approach gives a total of three modes of action against rootworm. The newer **VT4PRO®** trait package is designed to meet the evolving needs of growers with more targeted insect control requirements. Like SmartStax PRO corn, VT4PRO includes RNAi technology for rootworm, but is positioned primarily for fields with low to moderate rootworm pressure.

Where VT4PRO excels is in its enhanced above-ground insect protection similar to Trecepta (broad spectrum control for above ground pests like armyworm), with expanded control of pests such as western bean cutworm and earworm. These pests can significantly impact grain quality and yield. Whatever your desired trait, CROPLAN has a hybrid to fit your needs.

SmartStax® RIB COMPLETE™ VT4PRO® RIB COMPLETE™ SmartStax® PRO RIB COMPLETE™

NOTES:

GRAIN VS SILAGE

	IDEAL GRAIN	IDEAL SILAGE
YIELD	High grain yield with high test-weight.	High total plant yield of digestible forage.
KERNEL MOISTURE	Adequate drydown for harvest.	50% milk line for as long as possible at silage harvest time.
KERNEL HARDNESS	As hard as possible to decrease possibility of breakage.	Soft and easily broken for maximum digestion in the rumen.
KERNEL SIZE	Ideal size for transport and storage.	Large to increase possibility of breakage.
STALK MOISTURE	Wet to keep plant alive as long as possible to reach ideal grain harvest.	Dries to achieve 65% total plant moisture and stays in that range to extend harvest window.
STALK INTEGRITY	As stiff and solid as possible for late-season grain harvest.	As soft and flexible as possible, yet strong enough to remain standing through late silage harvest.
EAR HEIGHT	High position on the plant to ensure harvest by combine.	Low position on the plant to increase proportion of digestible fiber above the ear.
IDEAL AT HARVEST	Wet strong stalk that supports ears of vitreous, hard, dry kernels.	Large plant with a soft stalk and moist ear of large breakable kernels. Stalk and ear dry at a complementary rate.

SOYBEAN

CROPLAN

BUILT DIFFERENT. PLANTED ON PURPOSE.

CROPLAN soybeans are built to help farmers push performance where it matters most. Developed with a focus on local suitability and advanced trait technology, CROPLAN delivers consistent yield potential, strong agronomics, and dependable disease protection across diverse growing conditions. Backed by extensive field testing this is a lineup designed to fit today's management practices and tomorrow's challenges. Whether you're targeting yield, consistency, or flexibility across acres, we have soybean solutions engineered for confidence from planting through harvest.

MANAGE VARIABILITY LIKE A BOSS WITH WINPAK SOYBEANS

WinPak® combines two high yielding soybean varieties in one bag, so you can confidently seed without second guessing. Seeds are carefully paired to provide complementary characteristics such as region-specific disease and drought tolerance, standability, yield potential, and more.

COMPONENTS	PRR TOLERANCE	PRR GENE	SWM	STANDABILITY	IDC	HEIGHT
CP0921X	2	✓ Rps3a	2	2	✓ 1	M
CP0922X	2	NG	2	✓ 1	2	T

PRR = Phytophthora Root Rot | **SWM** = Soybean White Mould | **IDC** = Iron Deficiency Chlorosis

Scale: 1 = Excellent | **2** = Above average | **3** = Average | **4** = Below average | **5** = Fair

Height: T = Tall | **M** = Medium | **S** = Short

HOW IS WINPAK SEED SELECTED?

- Designed to mitigate risk across the whole field: more stability on variable acres, high yield potential on productive acres, and consistency in more challenging acres.
- Seed is strategically paired to provide growers complementary agronomic features for optimal performance in their specific region.
- Varieties are selected with similar maturities to ensure consistent drydown in the field.

MANAGING VARIABILITY

- Planting diverse soybean varieties can help balance contrasting soil types, improving overall field management.
- WinPak varieties help to capitalize on your top-end yield potential in the better areas of the field and offer solid defence in areas with greater soil variability.
- Helps to balance the variability inherent in other factors that affect yield potential, such as weather.

WEST EAST

Darren McColm
Agronomy Manager
Eastern Canada

This is a great new XtendFlex variety with high yield potential. I like the versatility as it works in any row width. We've also upgraded the disease package with stronger white mould tolerance.

For more information on this product, visit page 48.

SOYBEAN HERBICIDE TOLERANCE AND WEED CONTROL

Enlist® corn and Enlist E3® soybeans offer significant advancements in herbicide tolerance, providing growers with maximum flexibility for their in-crop herbicide applications. The Enlist system is tolerant to **glufosinate**, **glyphosate**, and **2,4-D choline**, allowing for versatile weed management. However, in tight crop rotations where both Enlist corn and Enlist E3 soybeans are grown, managing volunteer corn in the soybean year becomes a challenge. Volunteer corn can be effectively controlled using a **-dim graminicide**, such as **clethodim**. WinField United offers Antler® 360 Unpacked (separate adjuvant required) as a reliable option for controlling volunteer corn in these situations.

BEST PRACTICES FOR SPRAYING ANTLER 360 UNPACKED

OIL

Use a surfactant at 0.5% v/v, such as StrikeLock or Journey® HSOC. Corn, being a vertical grass with a waxy cuticle, requires both retention and penetration, of the herbicide. An MSO-based product, such as StrikeLock, can be effective.

WATER QUALITY

Consider your water quality. Any 'dim' is particularly sensitive to hard-water tie-up. Consider adding Crimson NG to prevent cations from tying up the Antler 360 Unpacked. In the presence of a dense crop canopy or heavy weed infestation, spray at a minimum of 10 gal of water for optimal coverage.

TIMING

Best results are generally achieved when the volunteer corn is at the 3-5 leaf stage, and the soybeans are no later than the 3rd trifoliate.

#1 FARMERS SHOULDN'T USE A #2 SYSTEM

Why settle for the runner-up when you could have **Roundup Ready® Xtend Crop System**, the #1 grown soybean system in Canada*? It's the only system that combines the high yield potential of Roundup Ready 2 Xtend® soybeans with built-in tolerance to both glyphosate and dicamba chemistries.

Applying the higher rate of Roundup Xtend®2 with VaporGrip® Technology in your first pass provides short-term residual activity on small-seeded broadleaves** with the added ability to effectively manage resistance concerns.

STAY AHEAD OF WEEDS WITH THE EARLY SEASON CONTROL OF CANADA'S #1 GROWN SOYBEAN SYSTEM.

Enlist™ weed control system · Enlist E3 SOYBEANS

Enlist E3™ soybean varieties are now available. Using the Enlist weed control system, farmers can take control of resistant and hard-to-control weeds.

The Enlist™ weed control system will change how you think about weed management in soybeans.

WHY USE THE ENLIST WEED CONTROL SYSTEM?

- A system with new traits providing herbicide tolerance in soybeans and corn
- Herbicide solutions built on an improved form of 2,4-D that lands and stays on target, enables management of hard-to-control and resistant weeds with Group 4 herbicides
- Enlist Stewardship resources that support the use of multiple modes of action to manage resistant weeds, provide training, and promote responsible and sustainable use

Enlist E3™ Soybeans

Enlist E3 soybeans provide high-yielding soybean genetics and industry leading triple-mode of action herbicide tolerance.

WHY USE ENLIST E3 SOYBEANS?

- Enlist E3 soybeans are tolerant to 2,4-D, glyphosate and glufosinate herbicides, which are part of a strong resistance management strategy
- Excellent crop tolerance enabling applications up to the R2 growth stage

Enlist™ herbicides that land and stay on target

Enlist Duo™ with COLEX-D™ technology HERBICIDE

COMPLETE CONVENIENCE.

Enlist Duo provides the convenience of both 2,4-D choline and glyphosate in one formulation for control of grasses and broadleaf weeds including hard-to-control and resistant weeds.

Enlist™ 1 with COLEX-D™ technology HERBICIDE

FLEXIBILITY AND CHOICE.

Enlist 1, a stand-alone 2,4-D choline formulation, provides the flexibility to tank-mix and adjust the rates of glyphosate or Liberty® 200 SN (glufosinate) for hard-to-control and resistant weeds.

NOTES:

CROPLAN

PERFORMANCE YOU CAN COUNT ON, SEASON AFTER SEASON

WinField United Canada offers a proven lineup of high-performing, award-winning sunflower hybrids. Each hybrid is designed with what matters most to you—strong yield potential, early-season maturity, and the opportunity for oil premiums. Take a closer look at some of the industry's leading sunflower seed genetics – you'll want them on your farm.

TARGET YOUR MARKETS AND HOLD NOTHING BACK

In the seed business, experience matters. Through extensive testing and screening with the Answer Plot program, we've brought some of the best-performing sunflower seed genetics to Canada, giving you winning options for your operation.

The genetics we offer can help manage disease pressure in your fields, with hybrids that can be positioned based on specific field stresses. Plus, we've incorporated the latest traits in our portfolio, too. That's technology – and experience – you can count on.

A STRONG START FOR A STRONG FINISH

CROPLAN sunflower seed treatment provides the protection you need to get your crop off to a strong start.

NEXT-GENERATION SEED TREATMENT FOR DOWNY MILDEW PROTECTION

Plenaris® fungicide is the latest addition to CruiserMaxx® Sunflower, the most comprehensive seed treatment on the market. CruiserMaxx Sunflower with Plenaris provides multiple modes of action, delivering the most sustainable, best-performing downy mildew management program in the industry. It also provides the broadest disease and insect protection available to maximize the genetic potential of sunflowers.

PLENARIS BENEFITS

- Provides excellent protection against all downy mildew races
- Outstanding activity on susceptible and resistant sunflower varieties

PROTECTION FROM INSECTS

All CROPLAN sunflower seed now comes Fortenza treated! This high-quality seed treatment protects against cutworms and wireworms, helping your crop get off on the right foot.

TOP-TIER PERFORMANCE

CROPLAN sunflowers have been a top performer in the Manitoba provincial trials since they were brought to our product lineup in 2021. Over the last five years, we've placed in the top six spots each year! With CP432E averaging 105% of the trial checks and CP455E averaging 114% – you can be confident in the yield of CROPLAN sunflowers!

STAFF PICK

CP455E

WEST EAST

From 2020-2025, CP455E has consistently led the pack in yield in Manitoba Provincial Sunflower Trials! Over the last six years, this sunflower was 114% of the leading industry check. If you haven't tried the CP455E sunflower, this is your time to get some; and with Fortenza on your seed, nothing will stop you this spring!

PEST MANAGEMENT

WEED CONTROL

- Use pre-emergence herbicide treatments or preplant-incorporated herbicides to combat kochia and Russian thistle.
- The DuPont™ ExpressSun® trait is tolerant to Express® herbicide with Group 2 mode of action.
- Express herbicide can be applied from the 2-8 leaf stage, and may be applied a second time for later flushes if required.
- Add Marshall® Unpacked or Antler 360 Unpacked to the tank mix for grassy weed control.

ADJUVANTS 101

- Express herbicide requires an NIS if sprayed on its own. Choose HiActivate® or MasterLock
- Antler 360 Unpacked requires an MSO. Choose StrikeLock, Journey HSOC, or Destination® MSO
- Marshall Unpacked requires an MSO (StrikeLock, Journey HSOC or Destination MSO) or an NIS (MasterLock or HiActivate)

For even more **adjuvant tips and tricks** or to **learn more** about adjuvants, check out our guide here.

CROPLAN **CP432E** Early Maturity — WEST EAST

ExpressSun® trait — NuSun

Characteristics (Fair – Excellent)
Stalk Quality
Phomopsis
Oil Content
Drydown

- High yield potential for early maturity.
- Shorter plant height with great standability in higher populations; very uniform.
- DMR Pl 8; resistant to all common races of downy mildew.
- Great for birdseed and dehull markets.
- Utilize higher populations if pushing yield goals higher; has also shown yield response to higher available nitrogen.

STAFF PICK

CROPLAN **CP455E** Mid-Maturity — WEST EAST

ExpressSun® trait

Characteristics (Fair – Excellent)
Stalk Quality
Phomopsis
Oil Content
Drydown

- High oleic top performing sunflower with consistent plot wins.
- Widely adapted across regions and field conditions.
- Medium plant with excellent drydown.
- DMR Pl 6; resistant to most common races of downy mildew.
- Good drought response along with sclerotinia tolerance for higher moisture years.

5 = Fair

1 Maturity
L = Long
M = Mid
E = Early

2 Market Options
Grain not guaranteed to be sold in your area.
Due to factors outside our control, WinField United does not guarantee oleic levels.

3 Plant Height
T = Tall
M = Medium
S = Short

4 RTP/RTN/RTF Ratings
L = Low response
M = Moderate response
H = High response
TBD = To be tested in 2027.

FIND YOUR CROPLAN DISTRIBUTION PARTNER

Make better decisions for your operation all season long with the help of your local CROPLAN distribution partner. They combine powerful data, localized insights, and unprecedented experience to help you win in the field.

YOUR LOCAL CROPLAN DISTRIBUTION PARTNER CAN HELP:

- Give you direct access to the latest CROPLAN seed line ups
- Determine the best hybrid or variety for your location and conditions
- Offer personalized support based on the unique challenges facing your region
- Share agronomic insights developed through our state of the art research and field trials programs

Enlist E3® soybeans contain the Enlist E3 trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate, and 2,4-D herbicides featuring Colex-D® technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with Enlist® crops are products that feature Colex-D technology and are expressly labeled for use on Enlist crops. 2,4-D products that do not contain Colex-D technology are not authorized for use in conjunction with Enlist E3 soybeans. WARNING: Enlist E3 soybeans are tolerant of over-the top applications of glyphosate, glufosinate, and 2,4-D. Accidental application of incompatible herbicides to this variety could result in total crop loss. When using 2,4-D herbicides, the grower agrees to only use 2,4-D products that contain Colex-D technology authorized for use in conjunction with Enlist E3 soybeans. Always read and follow herbicide label directions prior to use.

To plant this seed, a Grower must sign a Technology Use Agreement, read the Product Use Guide prior to planting. This seed is acquired under an agreement that includes the following terms: These seeds are covered under Corteva Agriscience and MS Technologies Patent Rights which can be found at: www.corteva.ca/en/trait-stewardship.html. In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in Canada under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

A license must first be obtained from Corteva Agriscience by signing a Technology Use Agreement and abiding by the terms and conditions of the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use Requirements detailed therein which can be found at www.corteva.ca/en/trait-stewardship.html. The transgenic soybean event in Enlist E3® soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies, L.L.C. ®TM Enlist, Enlist E3, the Enlist E3 logo, and Colex-D are trademarks of Corteva Agriscience.

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. These products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from these products can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for these products. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

Services and products offered by The Climate Corporation are subject to the customer agreeing to our Terms of Service. Our services provide estimates or recommendations based on models. These do not guarantee results. Before making financial, risk management and farming decisions, agronomists, commodities brokers and other service professionals should be consulted. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with products with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED AND APPROVED FOR SUCH USES. Contact the Pest Management Regulatory Agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology.

Roundup Ready® Technology contains genes that confer tolerance to glyphosate. Roundup Ready® 2 Technology contains genes that confer tolerance to glyphosate. Products with XtendFlex® Technology contain genes that confer tolerance to glyphosate, glufosinate and dicamba. Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Glyphosate will kill crops that are not tolerant to glyphosate. Dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your Bayer retailer, refer to the Bayer Technology Use Guide, or call the technical support line at 1-800-667-4944 for recommended Roundup Ready® Xtend Crop System weed control programs.

Used under license. LibertyLink® and LibertyLink logo® are registered trademarks of BASF. Used under license. Agrisure Viptera®, Fortenza®, Vayantis® IV are registered trademarks of a Syngenta group company. Used under license. ExpressSun®, Herculex®, Powercore® Enlist® and Optimum® GLY are registered trademarks of Corteva Agriscience™. Used under license. Bayer CropScience Inc. is a member of CropLife Canada.

Insect Resistance Management — Planting Refuges, Preserving Technology

Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management,** for the biotechnology traits expressed in the seed as set forth in the Bayer Technology Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.
