Feed : Gain	**7.73**
Days on Feed	**173**
Yield %	**63%**
% Prime or Choice	**97%**
Feed COG	**$0.99**

SUMMARY

These heifers were sorted by the ND backgrounder and came in as a fairly uniform group, averaging 798 pounds. They were on feed for 173 days in SW MN and had a pay weight of 1352 pounds. They were sold on the grid and dressed at 62.52%, with 97.37% grading prime or choice and 52.63% qualifying for CAB (Certified Angus Beef).

The feed-to-gain ratio is higher than what we usually see, which influenced the cost-of-gain. This is likely due to the heifers being fed a diet designed for moderate framed steers, but because of feed delivery logistics, we could not have 2 separate diets for different pens of cattle. Overall, these heifers performed and cut out well.
