Glove-and-Sleeve Coverage Check

Use before tasks that require cut-resistant gloves and sleeves.

Task / work area

Date

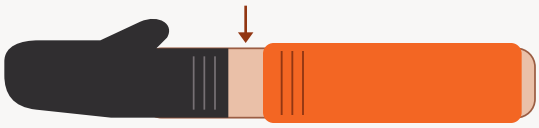
Glove model

Sleeve model

OVERLAP

Cuff overlaps sleeve. No skin shows at wrist.

GAP



Skin shows between the cuff and sleeve.

Before you start

Mark each box only when the check passes.

- [ ] **Confirm PPE is permitted for the task.**
  Follow site procedures. Do not wear gloves or sleeves where moving parts could catch them.
- [ ] **Match both pieces to the hazard.**
  Verify each item's cut rating and rated areas against the task's hazard assessment.
- [ ] **Inspect the gloves and sleeves.**
  Look for holes, worn areas, damaged seams or stretched cuffs. Replace damaged gear before use.
- [ ] **Check fit with the layers you wear on the job.**
  Put both on as directed. Check that the sleeve stays put and you can grip and move your thumb freely.
- [ ] **Check overlap all the way around each wrist.**
  Where wrist protection is required, the glove cuff and sleeve should overlap without exposing skin.
- [ ] **Check coverage in motion.**
  Away from sharp edges and moving equipment, reach, bend, turn your forearms and grip. Check that no wrist gap opens and the sleeve still covers the area at risk.

Any box unchecked? Stop before starting.
Tell your supervisor, fix the issue and recheck. Repeat if the task, PPE or clothing layers change.
