Agri-SC®

Liquid Soil Conditioner

Agri-SC® Soil Conditioner improves water movement, reduces soil resistance, and supports better growing conditions in tight, heavy, water-stressed or hydrophobic soils. All benefits are results of the product's ability to increase water infiltration and reduce soil shear strength.

KEY BENEFITS

IMPROVES SOIL WATER MOVEMENT

- Increases water infiltration
- Helps move excess water away from the root zone
- Supports better drainage after rainfall or irrigation
- Helps drainage tile systems work more efficiently
- Reduces runoff and soil loss from erosion
- Improves soil storage of precipitation

SUPPORTS BETTER SOIL STRUCTURE

- Reduces the negative effects of soil compaction
- Improves soil, air, and water balance
- Creates a better environment for roots and soil biology
- Reduces surface crusting in the seed zone
- Supports more efficient use of soil nutrients and water
- May reduce conditions that favor severe soil-borne disease

PROMOTES STRONGER CROP ESTABLISHMENT

- Helps soils warm more quickly in the spring
- Improves seed-to-soil contact
- Supports faster germination and more uniform emergence
- Encourages stronger early root development
- Supports faster early plant growth

IMPROVES FIELD EFFICIENCY

- Helps fields become workable sooner
- Supports more efficient tillage, planting, and harvest
- Reduces tillage resistance
- May help reduce fuel use

Agri-SC® improves soil conditions that drive better water movement, more uniform emergence, stronger roots, and more efficient fieldwork.

HELPS PROTECT CROP POTENTIAL

- Reduces crop stress from excess soil water
- Lowers denitrification risk in saturated soils
- Supports nitrogen availability through improved aeration
- Helps protect over-wintering crops from heaving or smothering
- Promotes earlier maturity and harvest
- Supports improved crop growth, quality and yield potential

SUPPORTS BETTER SEASON-LONG MANAGEMENT

- Aids preemergent herbicide movement into the soil profile
- Reduces conditions that favor shallow-rooted weeds
- May extend planting and grazing windows
- Reduces compaction damage in grazed fields and pastures
- May allow planting of higher yielding hybrids and varieties
- May reduce grain-drying costs

Agri-SC®

A Proven Value in Your Growing Operation™

Agri-SC® improves the physical condition of soils, creating a better environment for water movement, emergence, root growth, nutrient availability, fieldwork, and overall crop performance.

By managing excess water, reducing soil resistance, and supporting healthier soil function, Agri-SC® give growers a practical, economical way to improve field conditions. From planting to harvest, better water movement and soil structure protect crop potential and support more efficient, productive acres.

Agri-SC® supports better nutrient and water use, improved crop quality and yield potential, and a more flexible season through earlier planting and harvest.
