Pene-Turf®

SOIL CONDITIONER

Pene-Turf® Soil Conditioner helps reduce water-management problems in tight, heavy, water-stressed soils. Its benefits come from increasing water infiltration and reducing soil shear strength, improving the soil, air and water balance for turf grasses to flourish.

BENEFITS FOR TURF

IMPROVES SOIL AERATION

- Drains excess surface and root-zone water
- Improves aeration after rainfall or irrigation
- Supports more extensive turf root systems
- Promotes efficient use of soil nutrients and water
- Creates a favorable environment for soil biology
- Helps reduce conditions for soil-borne disease

SUPPORTS BETTER SOIL STRUCTURE

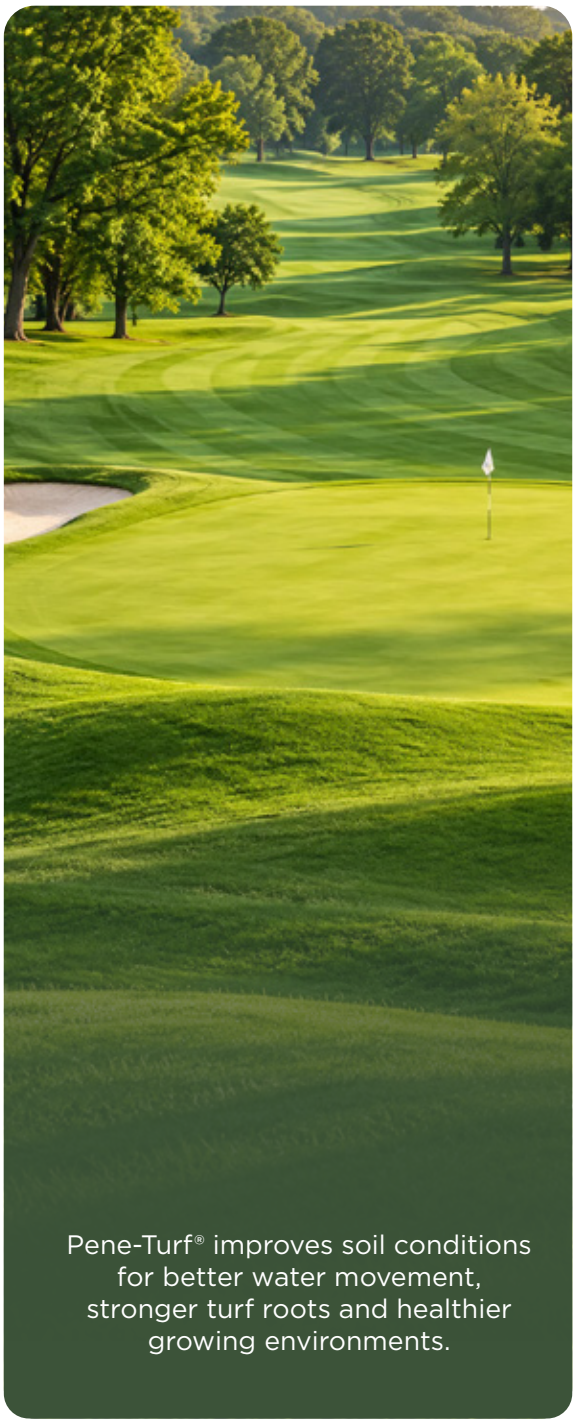
- Increases water infiltration into the soil
- Improves the soil, air and water balance
- Reduces negative effects of compaction
- Helps limit wet-soil damage from foot and cart traffic
- Enhances soil texture

PROMOTES STRONGER TURF ESTABLISHMENT

- Helps soils warm more quickly in the spring
- Improves seed-to-soil contact in newly seeded areas
- Supports faster germination and plant growth
- Promotes more uniform emergence
- Reduces surface crusting and erosion during seeding

REDUCES SOIL SHEAR STRENGTH

- Makes changing hole locations on greens easier
- Makes inserting tees into tee boxes easier
- Helps mechanical aeration work more effectively



Pene-Turf® improves soil conditions for better water movement, stronger turf roots and healthier growing environments.

IMPROVES NITROGEN AVAILABILITY

- Improved drainage lowers the root-zone water table
- Supports release of microbially produced nitrogen
- Reduces denitrification caused by excess water
- Improves oxygen availability in well-drained soils

IMPROVES DRAINAGE AND REDUCES EROSION

- Helps excess soil water reach drainage tile systems
- Reduces soil erosion and nutrient runoff
- Improves soil storage of precipitation
- Helps maintain the proper soil, air and water balance

SUPPORTS MORE EFFICIENT WEED CONTROL

- Reduces wet conditions that favor shallow-rooted weeds and unwanted grasses
- Surfactant properties improve herbicide effectiveness

Pene-Turf®

Pene-Turf® improves the physical condition of soil, helping golf courses and athletic fields manage water and support healthy turf growth.

NON-TOXIC & BIODEGRADABLE

Safe to use near rivers, ponds, and streams.

Better drainage and soil aeration support nutrient availability, turf growth and quality on golf courses and athletic fields.
