Powur Launches Compute Node Hosting with a Guaranteed Monthly Payment for Homeowners

Homeowners who host a compute node now earn a fixed monthly base, guaranteed for a 30-year term, plus a performance bonus when the network earns it.

SAN DIEGO, Calif. — November 4, 2026 — Powur, the solar energy platform on a mission to make solar everyone's business, today announced an updated Compute Node Hosting Program that pays participating homeowners a **guaranteed monthly payment**. Hosts receive a fixed base every month for the length of the agreement, with a variable network bonus on top when the compute network runs a surplus.

The program places a compute node, owned and maintained by Powur's compute partner, in the home alongside a new solar or solar-plus-battery system. The node sells computing time to customers like AI companies and research labs, and the homeowner is paid every month to host it, now with a base payment that does not depend on how busy any individual node is.

> "Homeowners told us they wanted certainty. So we built it in: a guaranteed monthly payment you can count on, for 30 years, with the upside of a bonus when the network does well."

WHAT'S NEW IN THE PROGRAM

- **Guaranteed base:** a fixed payment every month, paid even if the node sits idle.
- **Network bonus on top:** when the network runs a surplus, hosts share in it, up to their plan's cap. The bonus can be $0 in a slow month, but never reduces the base.
- **Three plans, set by the node:** Core, Plus and Max, determined by the node a homeowner selects at the time of sale.
- **30-year service term** from activation, with maintenance, repairs and upgrades included at no cost to the host.
- **Simple to host:** an indoor wall, a standard outlet and a 1 Gbps internet connection.

BUILT FOR CERTAINTY

Unlike variable, usage-based arrangements, the updated program leads with a guaranteed base payment. Homeowners can direct the payment toward their electricity, internet, solar or battery costs, or keep it, and track their base, bonus and payouts in the compute partner's app.

Any solar loan, lease or power purchase agreement remains a separate contract from the hosting agreement. Ending or changing hosting does not cancel a homeowner's financing or change its payments.

AVAILABILITY

The Compute Node Hosting Program is available to homeowners adding a qualifying new solar or solar-plus-battery system through Powur's network of independent sellers. Homeowners and prospective sellers can learn more at powur.com.

ABOUT POWUR

Powur is a solar energy sales and fulfillment platform on a mission to make solar energy everyone's business. Powur connects a nationwide network of independent solar professionals with the technology, financing and fulfillment they need to bring clean energy to more homes, putting homeowners, and the people who serve them, in power.

Forward-looking program details. The fixed monthly base is guaranteed from activation for the 30-year service term; the network performance bonus is variable, depends on network results, and may be $0 in a given month. Node models set the hosting plan at the time of sale. Program terms are governed by the Homeowner Hosting Agreement (Rev 2.10). Hosting income may be taxable; homeowners should consult an independent tax advisor. Quotation reflects Powur program messaging and may be attributed to a company spokesperson upon approval.
