What’s New in Version 4.3

The industry's #1 rated MLS agent app just got even better.

The latest MLS-Touch update delivers a faster, smarter, and more connected mobile experience—purpose-built to keep real estate professionals productive, responsive, and client-focused wherever they go.

With powerful upgrades like precision search, intuitive mapping, full listing edit capabilities, and enhanced sharing tools, every enhancement is designed to streamline workflows and help agents grow their business. This release also deepens integration with the Cotality ecosystem, offering beta users early access to CoreAI and CorePlan—bringing MLS-Touch, Matrix, and OneHome closer than ever before.

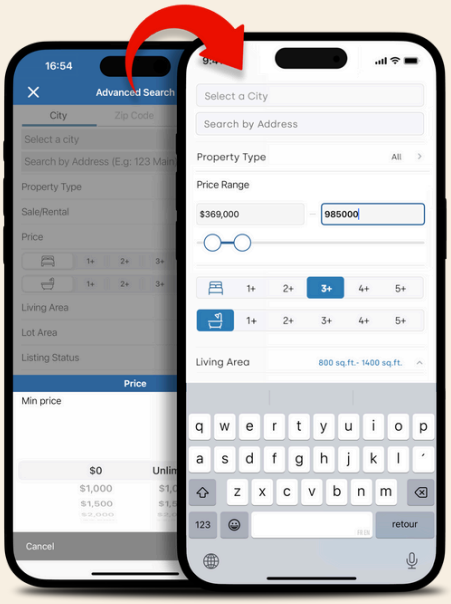
Packed with over 100 performance boosts and refinements, version 4.3 is engineered for greater speed, stability, and a smoother experience across today’s latest mobile devices.

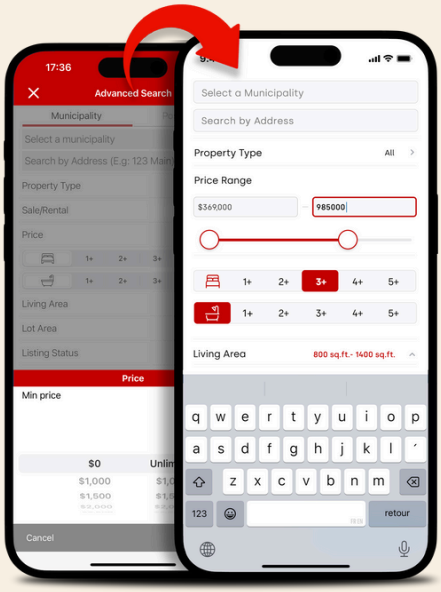
Version 4.3 Release Highlights:

- **Enhanced Search Experience:** the search interface has been completely redesigned for greater flexibility and precision, including updates allowing users to enter exact values or use sliders for faster selection.
- **Enhanced Map Parcel Lines:** parcel boundaries are now easier to see, improving the map experience for location-based searches.
- **Send Listings to OneHome:** For MLS clients subscribed to OneHome listings shared from MLS-Touch now use OneHome links, aligning with Matrix and providing a consistent experience for clients across platforms.
- **Share Any Listing:** Agents can now share* any listing—not just those in “My Listings”—with their personal branding across via WhatsApp and social media. This new capability helps agents promote more properties while maintaining a consistent brand presence.

Enhanced Advanced Search with Precision Controls

The redesigned Advanced Search is built for greater control, speed, and accuracy. With a clean new look and enhanced flexibility, users can now enter exact values for criteria like price, living area, or year built, or use intuitive sliders for faster, hassle-free adjustments. It's a smarter, more precise way to search—designed to help agents find exactly what they need, faster.





Clearer Parcel Boundaries on Map Search

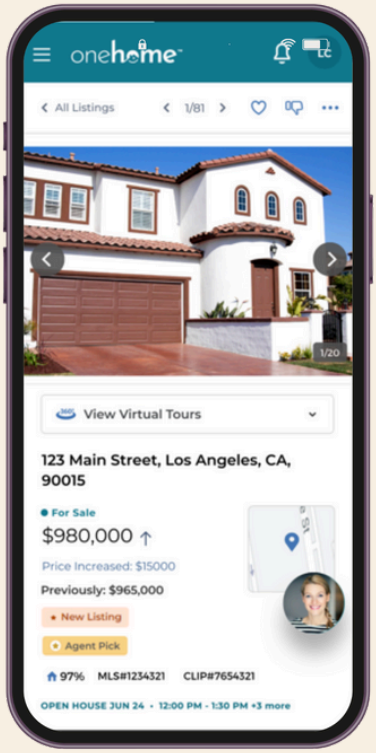
Parcel lines are now more visible on the map, giving users clearer boundaries that are easier for agents and their clients to see on a mobile device.

**Available to MLS-Touch clients with Realist*

Send Listings to OneHome

Listings shared from MLS-Touch by email or SMS will now use a OneHome™ link, simplifying the sharing process and providing clients with the same polished, user-friendly experience that makes OneHome the #1 real estate website for repeat visits.

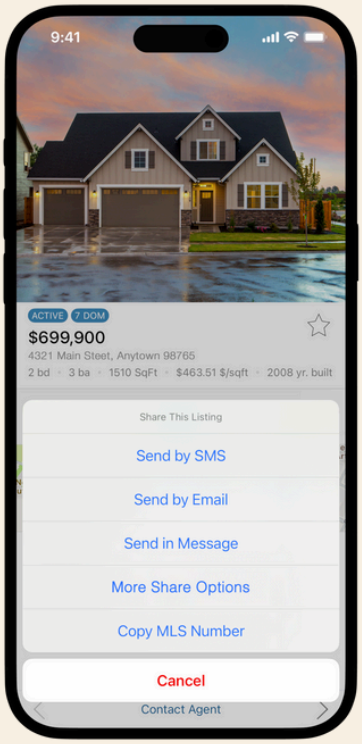
**For OneHome subscribers only*



Share Any Listing

Agents can now share any listing (not just those in “My Listings”) with their branding through social media platforms like WhatsApp and Messenger to help generate new leads and grow their business.

**This feature is configurable and can be enabled by MLS.*



Additional Changes & Bug Fixes in Version 4.3
