START

Brain Map
Analysis to identify problems that relate to the cognitive and executive function, mood, anxiety, attention, etc. Looks at 19 areas of the brain and the power that emanates.

Neurocognitive Testing
Using CNS vital signs, we test working memory, executive function, cognitive flexibility, motor speed, reaction time, and more! Valid, reliable, and efficient.

Attend sessions and follow protocol, diet plan, and breathing suggestions

Neurofeedback Training
After steps one and two are complete, a protocol will be developed specifically for you and your needs. Trainings consist of two sessions per/week

Don’t have the time?
Can’t commit to 1 hour, twice a week?

Ask us about our home neurofeedback training system!

Follow up to maintain results
