

Windows vs Panes

How we count your windows for a fair, accurate quote

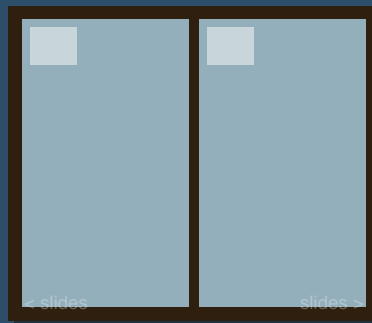

What is a pane?

A window is the whole unit in your wall. A pane is each individual piece of glass inside it.

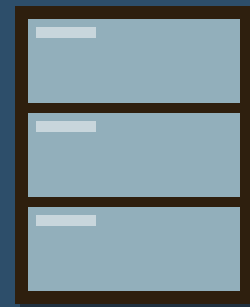

1 pane

Single pane

2 panes

Double slider

3 panes

Tall 3-pane

All three are one window — but each has a different number of panes. We price per pane, not per window, so you only pay for what actually needs cleaning.

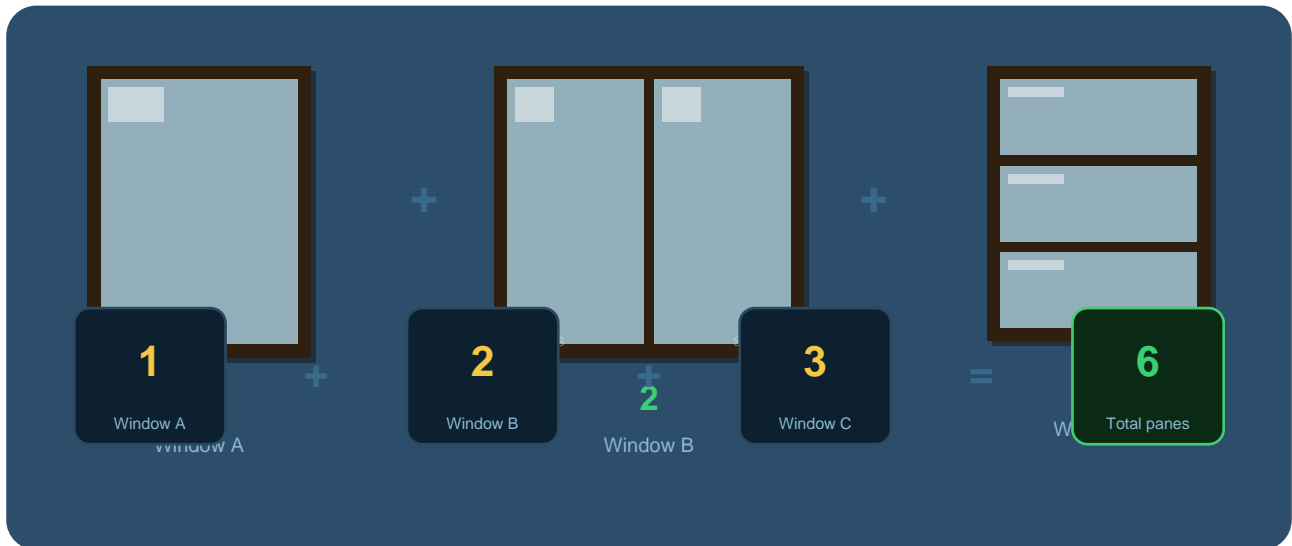

How to count: Look for the glazing bars (the dividers inside the frame). Each separate piece of glass = one pane.

Windows vs Panes

How we count your windows for a fair, accurate quote

How it adds up

A typical home with three different windows — here is how we count the panes.

You have 3 windows — but your quote is based on 6 panes. That is a much fairer reflection of the work involved, and means you only pay for what actually needs cleaning.

French Panes !

French-style doors and windows are priced differently to standard panes — here is why.

The diagram illustrates three window types on a dark blue background. On the left is a 'Standard door' with a single large light blue pane and a dark brown base. In the center is the text 'VS'. To the right of 'VS' are two French-style windows. The first is a 'French door' with a dark brown base and eight small brown panes arranged in a 4x2 grid. The second is a 'French window' with six small brown panes arranged in a 3x2 grid. Each French window has a red border around its panes.

1 pane

specialist rate

WARNING: French panes are priced separately. The many small panes divided by narrow glazing bars take significantly more time and care to clean. Please let us know if you have French doors or windows when requesting your quote.

How to spot them: A grid of small glass rectangles divided by thin bars — typically 6, 8 or 12 panes per door or window leaf.
