

NORTHERN PRECISION PRODUCTS — Going PRO Talent Fund

At Michigan Works! WestCentral, we take great pride in celebrating the success of local businesses that invest in their workforce and embrace new innovations. One such company is Northern Precision Products, a Le-Roy, Michigan-based CNC and screw-machine shop that has been producing high-quality precision-machined components for more than 30 years.

Recently, Northern Precision Products took a significant step forward by completing advanced PLC (Programmable Logic Controller) training, allowing it to fine-tune its cutting-edge machining processes. Michigan Works! West Central helped the company to apply for and receive funding through the FY2025 Going PRO Talent Fund.

Northern Precision Products recently completed its Going PRO Talent Fund training plan to provide

PLC training for one employee. This specialized training equips their team with the expertise needed to optimize operations, enhance efficiency, and maintain their reputation for excellence in precision manufacturing.

By continually investing in their workforce, Northern Precision Products is positioning itself for continued growth and success in an increasingly competitive industry. Michigan Works! West Central is thrilled to support and celebrate their

commitment to upskilling and innovation. We look forward to partnering with them in the future as they continue to enhance their capabilities and expand their impact in the manufacturing sector.
