

# FORAGER™

## SSH

Sterile-Head Hybrid  
Sorghum-Sudangrass

# MIXON SEED SERVICE

FORAGER™ SSH is a sterile-head sorghum-sudangrass hybrid that is aphid tolerant and makes an excellent choice for forage and cover crop uses. For forage, it can be grazed or harvested at the boot stage and will produce tremendous tonnage across several cuttings. This hybrid has a large, fibrous root system that penetrates and holds soil in place. Combined with its huge biomass production, it makes an excellent choice for cover crop uses.

### YIELD POTENTIAL

**15 - 18 TONS**

### HARVEST RECOMMENDATIONS

<b>1st Cutting</b>	60-80 days 60-80" or 80-120 days 80-120"
<b>2nd Cutting</b>	50-70 days 50-70"
<b>3rd Cutting</b>	30-40 days 30-40"

### SEEDING RATES

Seeding Method	Dryland Lbs/A	Irrigated Lbs/A	Dryland Seed/A	Irrigated Seed/A
Drilled	18 lbs.	36 lbs.	500,000	1,000,000

### AGRONOMIC TRAITS

<b>Ideal Harvest Height</b>	60-80" or 80-120"
<b>Total Height</b>	130-140"
<b>Relative Maturity</b>	Late
<b>Days to Maturity</b>	93 - 98 Days
<b>Midrib Type</b>	Conventional
<b>Standability</b>	Excellent
<b>Sugar Cane Aphid</b>	Yes
<b>Downy Mildew Resistant</b>	Susceptible
<b>Anthracnose Resistant</b>	Moderate
<b>Double Cropping</b>	Yes
<b>Dryland/Irrigated</b>	Both
