

FORAGERTM

Summer Mix

Warm-Season
Grazing Mix

FORAGERTM Summer Mix is designed to provide high-quality and high-yielding forage for livestock such as stockers, replacement heifers, first-calf heifers, and dairy cows, as well as small ruminant livestock, as these operations are rapidly increasing across the southeast.

WHAT'S IN IT?

Pearl Millet (20%)
Sunn Hemp (20%)
Iron Clay Cowpeas (60%)

PLANTING

Ideal planting time is from mid-April to mid-June. Ideal planting rate is 50 lbs./acre drilled and 75 lbs./acre broadcast.

KEY BENEFITS

- Provides high-quality, transitional food source to supplement perennial warm-season pasture systems
- Adds stability in unfavorable environmental conditions and mitigates disease or insect pest issues
- Legume component adds nitrogen source to the system, improving forage quality for grazing or silage

LET'S TALK SEED.
