

ROUNDWOOD PRODUCTS

Roundwood New Zealand specialises in producing top quality Roundwood Products for the Rural Farm Fencing, Horticulture and Viticulture Markets. These product lines consist of Full Round, Half Round and Quarter Round Posts, Strainer Posts and Fence Battens.

All processing is completed on site from raw Log Feedstock to Peeling, Grading, Bundling, Steaming and Treating. All grading is done in accordance to the New Zealand Standard (NZS) NZS3607 to ensure each Roundwood Product produced is fit for its intended purpose, and measured on smallest face diameter and not a face average. All our Roundwood Products are put through the Steam Drying process. This allows us to get an even penetration and retention of CCA chemical in the Treatment process. They are then Pressure Treated to H4 Hazard Class in accordance with New Zealand Standards NZS3640. Once the Treatment process is complete Post Products are stored on our Drip off Pad to allow Fixation to occur. Fixation happens when the chemical is dry on the wood and no more leaching of chemical can occur.

Use our Roundwood Products for:

- Rural Farm Fencing – Dairy, Sheep, Deer and Beef.
- Horticulture – Kiwifruit and Apple Orchard Developments.
- Viticulture – Vineyard (Winery) Developments.
