**NSN Global Services LLC
Annual Supply Chain Responsibility Statement 2026
Version 1.0**

Introduction

NSN Global Services, registered in Dover, Delaware, United States, is a global provider of technological solutions dedicated to advancing education through digital infrastructure, development, and deployment services. Our operations extend across the United States, United Kingdom, European Union, Australia, India, Africa, and the Middle East, where we support educational institutions, governments, businesses, and individuals with primarily digital services aimed at enhancing learning accessibility and efficiency.

This Annual Supply Chain Responsibility Statement for 2026 outlines our planned approach to managing responsibilities within our supply chain for the upcoming reporting period. Given our focus on digital services, our supply chain primarily involves third-party providers such as cloud computing vendors, software developers, data hosting services, and occasional hardware suppliers for supporting infrastructure. We intend to comply with applicable supply chain-related laws and standards across jurisdictions, conducting checks on third parties to ensure alignment. This statement outlines aspirational goals without creating binding commitments, aiming to align with international guidelines like the OECD Due Diligence Guidance for Responsible Business Conduct.

Supply Chain Due Diligence and Risk Assessment

NSN Global Services intends to implement thorough due diligence processes for selecting and monitoring third-party suppliers. This includes plans for initial screenings and ongoing assessments to identify risks related to ethical, environmental, and social issues in our digital-centric supply chain. We aim to require all suppliers to comply with our Supplier Code of Conduct, which intends to mandate adherence to core standards on labor practices, anti-corruption, and data security.

Risk assessments plan to be conducted based on factors such as supplier location, service type, and potential impacts, in line with legal frameworks like the EU Corporate Sustainability Due Diligence Directive, U.S. Federal Acquisition Regulation (FAR) for government-related contracts, and equivalent requirements in other regions. For high-risk suppliers, such as those handling data or operating in regions with known challenges, we intend to apply enhanced scrutiny through questionnaires, certifications, and contractual clauses enforcing compliance.

Ethical Sourcing and Labor Standards

We plan to ensure that our supply chain practices prohibit forced labor, child labor, and human trafficking, compliant with laws including the U.S. Trafficking Victims Protection Act, UK Modern Slavery Act 2015, Australian Modern Slavery Act 2018, EU regulations, Indian Bonded Labour System (Abolition) Act, and ratified ILO conventions in African and Middle Eastern jurisdictions. Third-party suppliers aim to be checked for fair labor conditions, including safe working environments and fair wages, through self-attestations and periodic reviews.

In our digital supply chain, this extends to planning to ensure that software and service providers maintain ethical workforce policies, with intentions to avoid exploitation in remote or outsourced development teams. Where applicable, we aim to verify compliance via independent audits or third-party certifications, such as those aligned with SA8000 standards for social accountability.

Environmental Considerations in the Supply Chain

NSN Global Services plans to integrate environmental responsibility into supply chain management, focusing on third parties' impacts given our digital operations. Suppliers intend to be evaluated for compliance with environmental laws, such as the U.S. Clean Air Act (for data centers), EU RoHS Directive (for any electronic components), Australian Environment Protection Act, Indian Environment (Protection) Act, and regional equivalents in Africa and the Middle East.

We aim to prioritize suppliers with energy-efficient practices, such as renewable-powered cloud services, to minimize indirect carbon footprints. Checks include plans to review suppliers' environmental policies and performance reports, intending to avoid partnerships with entities involved in significant environmental harm. For hardware elements in our supply chain, we plan to ensure responsible sourcing of materials, compliant with e-waste regulations like the EU WEEE Directive.

Anti-Corruption and Ethical Business Conduct

Our supply chain responsibility includes plans to guard against corruption and unethical practices. Third-party suppliers plan to undergo anti-bribery checks in accordance with the U.S. Foreign Corrupt Practices Act (FCPA), UK Bribery Act 2010, EU

anti-corruption directives, Australian Criminal Code, Indian Prevention of Corruption Act, and similar laws in other regions. Contractual terms intend to require suppliers to maintain anti-corruption programs, with training and reporting obligations. We aim to conduct compliance verifications through due diligence tools, such as background checks and ongoing monitoring, to ensure integrity in our digital service ecosystem. Any red flags identified during checks plan to result in immediate remedial actions or termination of relationships as required by law.

Conflict Minerals and Responsible Sourcing

Although our primarily digital services limit direct involvement with physical minerals, we plan to comply with conflict minerals regulations where applicable to third-party hardware or components. This includes intentions to adhere to the U.S. Dodd-Frank Act Section 1502, requiring suppliers to disclose sourcing from conflict-affected regions and provide assurances of conflict-free materials. Similar checks aim to be applied under EU Conflict Minerals Regulation and voluntary standards in other jurisdictions.

Suppliers plan to be required to submit documentation verifying responsible sourcing, with our due diligence processes intending to ensure no support for armed conflict through supply chain activities.

Monitoring, Auditing, and Remediation

NSN Global Services intends to conduct regular monitoring of supply chain compliance through a combination of self-assessments, site visits (where feasible for digital providers), and third-party audits. Performance plans to be tracked against key indicators, with intentions for corrective action plans for any non-compliances identified.

Grievance mechanisms aim to be available for stakeholders to report supply chain concerns, handled confidentially in line with laws like the EU Whistleblower Directive. Remediation processes plan to ensure timely resolution, including contract adjustments or supplier disengagement if violations persist.

Conclusion

In 2026, NSN Global Services plans to maintain responsible supply chain practices tailored to our digital edutech model, intending to comply with global laws through rigorous third-party checks and due diligence. This approach aims to support ethical, sustainable partnerships that enhance our service delivery. This statement is published on our website for transparency.
