

Our client, a food manufacturer required a new environmental permit to discharge wastewater, however they were met with a wall of technical questions when they approached the regulator. They called on Envireau Water for technical support.

The Challenge

Our client's site, based in North Yorkshire, has no access to a mains sewer connection due to its rural location. To solve this issue, they planned to construct an on-site treatment plant to manage the wastewater from their operations. A previous application to the Environment Agency had been subjected to a range of technical questions they were unable to answer. It was then that they contacted us for guidance on the most effective solution and evidence for the Environment Agency.

To add to the challenge, our client needed the permit to be approved quickly as operations were nearly underway at the factory, and wastewater would have to be transported off-site to be treated, an extremely costly temporary solution.

The Envireau Way

Envireau Water has over 25 years' experience of water management. We were able to determine the most effective method of discharging and successfully demonstrated to the Environment Agency that there was no unacceptable environmental impact.

We ensured that the Environment Agency were presented with the right level of information, in a clear and concise way.

By working closely with both the client and regulator throughout the whole application process, Envireau Water addressed any technical queries as they arose, which meant that the process was completed as efficiently as possible avoiding unnecessary, costly delays.

The Result

Envireau Water obtained a permit that met our client's needs, with conditions that were appropriate. We would like to thank the Environment Agency for working collaboratively with us to achieve this successful outcome for our client.

Need our help?

Can we support you with a similar project? Envireau Water's point of difference is our approach to regulation, and we have a track record in successful applications. Get in touch on 01332 871 871 to see how we can help you.

"We recognise that every project is unique and have the flexibility to tailor our services to efficiently meet your specific project requirements."
