

SMARTWATER

Envireau Water's Stirling Achievement

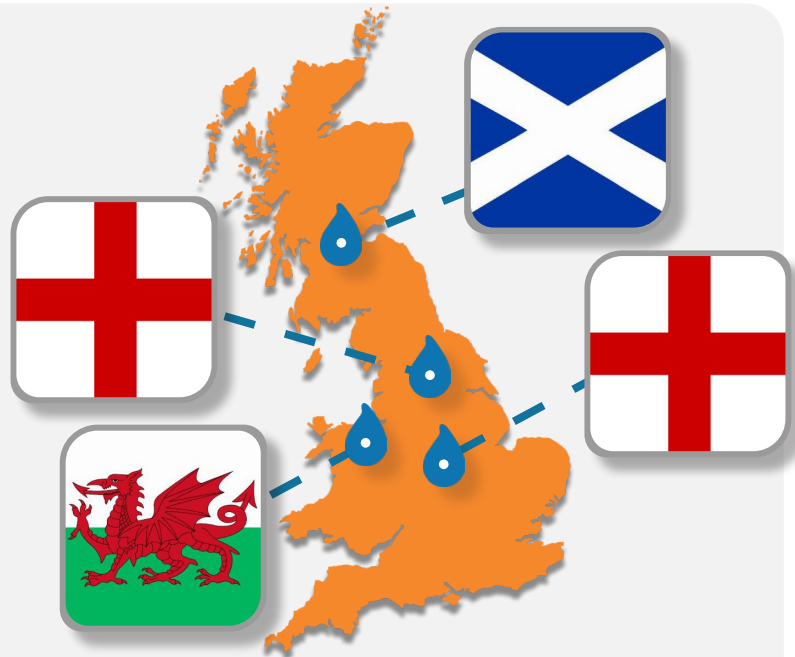

We are thrilled to announce that Envireau Water has just established a permanent base in Stirling, Scotland.

Our exciting expansion demonstrates our dedication to our existing clients, allowing us to respond with increased efficiency to requests. It illustrates the growing opportunities and demand for high-quality water resource consultancy services throughout the region, most notably within the food and drink and quarrying sectors.

Dr Phil Ham, Managing Director & Hydrogeologist commented...

“Establishing a base in Scotland has been part of Envireau Water’s plan for growth, and a personal ambition, for some time. Following a strategic recruitment campaign, our newly appointed Principal Hydrogeologist, Chris Woodhouse will be heading up Envireau Water Scotland. With lengthy ambitions now a reality, we have no doubt in our success and look forward to accelerating our growth.”

Envireau Water’s Stirling Office is set to officially open this summer, where the team look forward to meeting clients old and new.

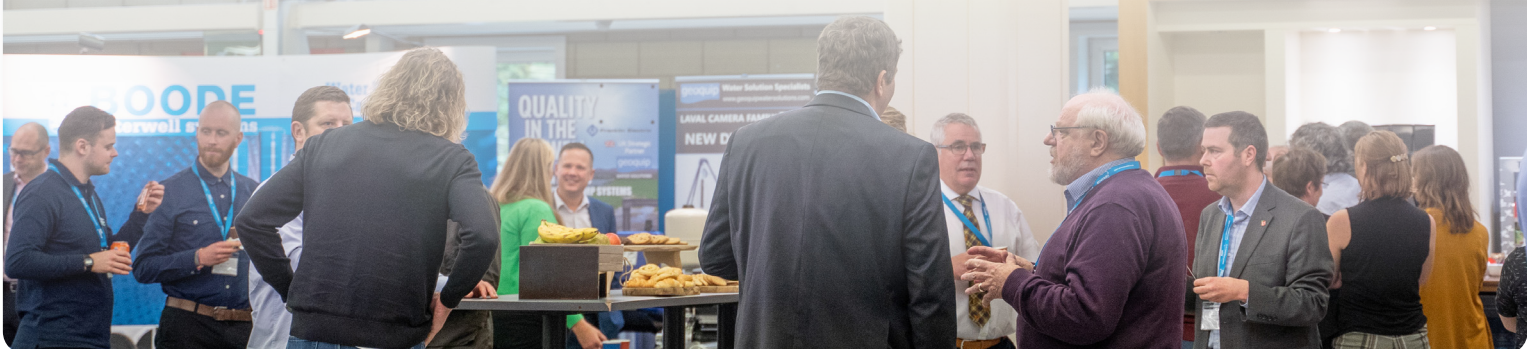

Drilling Boreholes is a Risky Business!

Fed up with virtual conferences and webinars? Want to engage in discussions and network with REAL people?

In November 2021, our Borehole Users Conference is back! With a brand-new venue, our flagship conference will bring owners, operators and developers of private water supplies together to focus on the risks of borehole development and how they can be mitigated.

Accompanied by our highly acclaimed trade exhibition, showcasing operators, leading contractors, and equipment suppliers in the water well industry.

The Borehole Users Conference 2021 is not one to be missed! Check out our [events page](#) for the latest updates or follow #BHUC2021 on social media.

Two New Talents Join the Team

Envireau Water is growing! Following our successful recruitment campaign, Chris Woodhouse and Lydia Gutteridge both joined the team from Stantec in March 2021.

Chris, a Chartered Geologist with 9 years of hydrogeological experience, will be heading up Envireau Water's Scottish office. His expertise in quarrying and mining hydrogeology, hydrogeological landfill risk assessments and groundwater flow modelling, as well as his thorough understanding of the UK's regulatory framework, provides further breadth to our existing technical team.

Lydia joined the Midlands Office in early March. Lydia's excellent academic achievement of distinction in her MSc in Hydrogeology at Birmingham University, and her desire to develop across all four of our core sectors makes her an equally exciting addition to our team.

“ I knew that joining Envireau Water would provide me with a diverse range of projects to work on across a range of sectors. This opportunity is really appealing to me at the start of my career. ”

Lydia Gutteridge, Hydrogeologist

“ When I saw the opportunity to support the expansion of Envireau Water and continue to develop my expertise at a company renowned for its expert management of water resources, it was a prospect not to be missed. I'm excited about collaborating with our Scottish clients and working with the Envireau Water team. ”

Chris Woodhouse,
Principal Hydrogeologist

Our Commitment to Climate Change

The coronavirus pandemic may have dominated the headlines for the last 12 months, but 2021 will see climate change firmly back on the global agenda.

Scientific evidence and projections overwhelmingly show that our climate is warming, that human influence is unequivocal and physical impacts are unavoidable. Equally, the use of fossil fuels continues to play an important role in global development and the transition to a green economy needs to be carried out with this in mind.

Envireau Water is committed to playing our part in the transition. We are pleased to announce our Climate Change Commitments and will minimise the carbon footprint created by our business activities by:

- Using renewable energy sources and/or green energy suppliers to heat and power our offices.
- Reducing waste through pro-active recycling and the introduction of a 'paperless' office environment.
- Improving awareness among our employees and promoting environmentally friendly ways of working.
- Choosing suppliers who demonstrate they have good environmental practices.
- Optimising transportation needs for our staff, encouraging car sharing and the use of public transport where practically possible.

It is clear to us that a global response is required to mitigate against the worst potential outcomes of climate change. We can't fix the problem alone and we therefore encourage our clients and suppliers to join with us to tackle the problem. Let's reduce our carbon footprints together!
