

## ENERGY EFFICIENCY POLICY

To protect our world from potential dangers, we use our energy efficiently and set targets to reduce our energy consumption.

For that;

- ◆ In order to meet both our responsibility towards nature and our legal obligations, we comply with national and international standards, laws and regulations, voluntarily carry out studies that reduce energy consumption and continuously improve our energy consumption performance. We monitor the results of our work.
- ◆ We set targets and ensure the participation of our employees through our training programmes. We include energy efficiency.
- ◆ We are committed to working with all our stakeholders to create common objectives and results in energy management. We try to continue to interact with our guests, staff, visitors and all business partners in order to achieve a general awareness of these issues.
- ◆ We try to research, find, purchase and use suitable energy-efficient products, devices, equipment and technology alternatives.
- ◆ Our goal is to document our energy management system, to share it with all our departments and to update, review and continually improve it as necessary.
- ◆ We assess energy risks or emergencies, such as energy shortages, and plan the measures that can be taken.
