

LANCASTER PLASTIC SURGERY ASSOCIATES

ALL-INCLUSIVE SELF-PAY PACKAGE

Lower Eyelid Rejuvenation

Transparent pricing. Complete care. Performed safely in our office under local anesthesia.

At Lancaster Plastic Surgery Associates we offer an all-inclusive self-pay package for lower eyelid rejuvenation. This treatment is for patients who look tired or have dark circles from hollowing and skin quality — not from extra lower-lid skin or herniated fat bags. One clear professional fee covers your consultation, CO2 laser to the lower eyelids, fat grafting of about 1 mL per side, and routine postoperative care — without hospital facility fees or a separate anesthesia-team charge. Your surgeon will confirm this is the right plan; true bags or excess skin are usually a surgical lower blepharoplasty and a different quote.

What's Included

- Consultation — virtual or in-person
- CO2 laser to the lower eyelids, performed under local anesthesia in our office
- Fat grafting of about 1 mL per side — your own fat or Lipoderma allograft (Britecyte)
- Healing topicals for the initial laser recovery period (Stratacel silicone gel or equivalent)
- Two postoperative visits (approximately 1–2 weeks to check healing, and 3 months to assess results)
- Uncomplicated postoperative care and written pre- and post-treatment instructions

Package Pricing

Procedure	All-Inclusive Price
Lower Eyelid Rejuvenation — CO2 + fat grafting, in-office under local (TLLOBL02)	\$3,500

Typical procedure time is 60–90 minutes. Choosing your own fat adds a small harvest (usually abdomen or inner thigh) and may extend the block. Allograft fat has no donor site. The package price is the same either way.

Your Fat Choice — Same Price

About 1 mL is placed on each side to soften the hollow under the eye and the tired look. You choose the source at consultation:

- Your own fat (autologous). A small amount is harvested through a tiny puncture, typically from the abdomen or inner thigh, prepared, and placed in the tear-trough / lower-lid area. There is a small donor-site dressing for a few days.
- Allograft fat — Lipoderma (Britecyte). Off-the-shelf processed fat with no donor site and no harvest time. A good option if you prefer not to have a second site treated.

Volume is typically about 1 mL per side. If substantially more volume is needed, that is discussed and priced separately so there are no surprises.

Who This Package Is For — and Who It Is Not

This package is intended for patients with:

- Dark circles or shadowing from hollowing under the eyes
- A tired look without true bags of herniated orbital fat
- Crepey or finely wrinkled lower-lid skin that will benefit from CO2

This package is not a substitute for lower blepharoplasty. If you have excess lower-lid skin, malar bags, or herniated fat that should be removed or repositioned, your surgeon will recommend a surgical plan instead. Upper blepharoplasty, four-lid surgery, and standalone peri-orbital CO2 or standalone fat grafting are also separate quotes.

Prepare Ahead — CO2 Washout

- Avoid sun, tanning beds, and a tan or sunburn for at least 7–14 days before treatment. We cannot treat tanned or burned eyelid skin.
- Stop exfoliants and irritating products for 7–14 days (retinoids / Retin-A, glycolic acid, peels, dermaplaning, HydraFacial).
- Dermal fillers at least 14 days before; neuromodulators (Botox / Dysport / Xeomin) at least 12 days before.
- History of cold sores: you must pre-medicate with an antiviral (Valtrex or acyclovir) starting 2 days before treatment. Call us for a prescription if needed.
- Arrive with a clean face — no makeup on the eyelids if you can help it.

Why Patients Choose This Package

- Price transparency. One professional fee covers consult, lower-lid CO2, about 1 mL of fat per side, healing topicals, and two follow-up visits.
- No facility or anesthesia-team fees — this is done under local in our office.
- You choose your own fat or allograft. The package price does not change.
- The plan is built around a tired look and dark circles, not an insurer's criteria for eyelid surgery.
- No prior-authorization delays. Cosmetic lower-lid rejuvenation is almost never a covered benefit.

Financing Options

Need a payment plan? LPSA partners with PatientFi to offer financing to our patients. Scan the QR code below or ask our team for a link when you schedule.

How Booking Works

- A \$50 non-refundable consultation scheduling fee is applied toward your package price. The consultation may be virtual or in-person. In-person consult fees are collected at check-in. Virtual consult fees are collected by text-to-pay or phone call before the appointment. We accept all major credit cards.
- To reserve a procedure date, a 20% down payment is required. This deposit is non-refundable under all circumstances.
- The remaining balance is due prior to or on the day of the procedure.
- Quotes are valid for 30 days. Fat source (own fat vs Lipoderma) is confirmed at consultation before the block is locked.

Important Notes

This package is intended for uncomplicated in-office lower-lid rejuvenation. Extra visits, a later touch-up, or conversion to surgical lower blepharoplasty are priced separately. Your surgeon will examine the lids, tear troughs, skin quality, and eye history at consultation and confirm that TLLOBL02 is appropriate for you. Nicotine increases the risk of delayed healing, pigment change, and poor fat-graft take and is strongly discouraged. Vision is often blurry from ointment and swelling — a responsible adult should drive you home

and stay the first night. Do not wear contact lenses for at least 2 weeks. Ready to take the next step? Call (717) 481-3444 or visit lancasterplastics.com.
