All-Inclusive Self-Pay Package

Upper Blepharoplasty

Transparent pricing. Complete care. Performed safely in our office under local anesthesia.

At Lancaster Plastic Surgery Associates we offer an all-inclusive self-pay package for upper eyelid surgery (upper blepharoplasty). You receive one clear professional fee that covers your consultation, the procedure in our office under local anesthesia, and routine postoperative care — without hospital facility fees or a separate anesthesia-team charge.

What's Included

- Consultation — virtual or in-person
- Upper blepharoplasty performed under local anesthesia in our office
- Three postoperative visits (approximately 1 week, 1 month, and 3 months)
- Scar management guidance and materials as needed
- Uncomplicated postoperative care

Package Pricing

Procedure	All-Inclusive Price
Upper Blepharoplasty — in-office under local (TLUPBL01)	\$4,000

Typical procedure time is 60–90 minutes. This package is for upper eyelids only and is intended for uncomplicated cases performed in the office under local anesthesia.

Optional Add-Ons (Priced Separately)

Add-On	Price
Peri-orbital CO2 laser — full peri-orbital rejuvenation	+ \$1,000
Fat grafting — your own fat or Lipoderma allograft (Britecyte)	Quoted at consult

Peri-orbital CO2 can be added the same day when you are a candidate. It is used for skin quality and fine lines around the eyelids, not as a substitute for removing excess upper-lid skin.

Fat grafting (your own fat, or allograft fat — Lipoderma by Britecyte) is planned when volume is needed in the peri-orbital area. The additional fee is calculated at consultation and depends on the planned volume and whether we use your own fat or allograft. Autologous harvest also changes the time needed, so it is confirmed before we book the procedure block.

If You Add Peri-Orbital CO2 — Prepare Ahead

- Avoid sun, tanning beds, and a tan or sunburn for at least 7–14 days before treatment.
- Stop exfoliants and irritating products for 7–14 days (retinoids / Retin-A, glycolic acid, peels, dermaplaning, HydraFacial).
- Dermal fillers at least 14 days before; neuromodulators (Botox / Dysport / Xeomin) at least 12 days before.
- History of cold sores: you must pre-medicate with an antiviral (Valtrex or acyclovir) starting 2 days before treatment. Call us for a prescription if needed.

Why Patients Choose Self-Pay Instead of Insurance

- Price transparency. You know the professional fee — and any add-on — before you schedule.
- No facility or anesthesia-team fees when the procedure is done under local in our office.

Lancaster Plastic Surgery Associates

- No surprise billing or post-operative denials. Insurers often treat upper blepharoplasty as cosmetic unless strict visual-field and photo criteria are met and prior authorization is approved. If the plan later decides those rules were not met, patients can be left with unexpected bills after surgery is already done.
- The plan is built around your eyelids and goals — including optional CO2 or fat grafting — not an insurer's approved diagnosis list.
- A better pre- and postoperative experience. Time at consultation, scar care, and three included follow-up visits are part of this package.
- No prior-authorization delays. Once you are ready, we can schedule.

Financing Options

Need a payment plan? LPSA partners with PatientFi to offer financing to our patients. Scan the QR code below or ask our team for a link when you schedule.

How Booking Works

- A \$50 non-refundable consultation scheduling fee is applied toward your package price. The consultation may be virtual or in-person. In-person consult fees are collected at check-in. Virtual consult fees are collected by text-to-pay or phone call before the appointment. We accept all major credit cards.
- To reserve a procedure date, a 20% down payment is required. This deposit is non-refundable under all circumstances.
- The remaining balance is due prior to or on the day of the procedure.
- Add-on fees (peri-orbital CO2 and any fat grafting) are confirmed at consultation and collected with the package balance.

Important Notes

This package is intended for uncomplicated upper-lid cases. If additional treatment becomes necessary (for example, management of an unexpected complication, formal wound care beyond routine, or a later revision), those services are discussed and priced separately so there are never surprises. Your surgeon will review your eyes, brow position, dry-eye history, and skin quality at consultation and confirm that the package — and any add-on — is appropriate for you.

Nicotine use of any kind increases the risk of healing problems and poor scars and is strongly discouraged. Vision is often blurry from ointment and swelling after eyelid surgery. A responsible adult should drive you home and stay with you the first night. Do not wear contact lenses for at least 2 weeks.
