

Joint RuminOmics/Rumen Microbial Genomics Network /ECO-FCE Workshop

16th June 2014, 10:00 – 16:00
Forbes Suite, Aberdeen Exhibition and Conference Centre
Aberdeen, UK

The EU Framework 7 project [RuminOmics](#) is organising a satellite workshop, together with the [Rumen Microbial Genomics Network](#) and the analogous FP7 project on non-ruminant species, [ECO-FCE](#), on the day preceding the main Rowett-INRA2014, [Gut Microbiology: from Sequence to Function](#) conference.

The aim of the workshop will be to compare and contrast methodologies, results and problems from the different projects, with the theme: *How does the gut microbiota influence feed efficiency?*

You are invited to join the workshop and to contribute your thoughts on these and related matters.

Registration and attendance to the workshop is free, however, early registration is advised as numbers are limited. Financial support is also available to young delegates, particularly from Eastern Europe and recent accession countries. Deadline for registration is 2nd June 2014 and for financial support is 5th May 2014.

Please note that delegates **are responsible for** organising their own accommodation. Further information is available on the [main conference site](#).

You can download the registration and financial support forms, and learn more about the programme on the RuminOmics [workshop page](#).
