

Mularis Digital Permit: Approval without having to flip back through notebooks.

From paperless approvals to audit-ready documentation: Our module connects people, workflows, and systems - seamlessly, transparently, and fully integrated into your environment.

From handwritten forms, follow-ups, and uncertainty - to a clear digital process.

Approving means taking responsibility. And yet, many approval processes are still paper-based, duplicated across systems, or scattered between departments. Mularis Digital Permit puts an end to that complexity: a central platform where every permit is requested, reviewed, approved, and documented – digitally, role-based, traceable, and fully validation-ready.

One system. One source of truth. Zero paperwork.

Seamless Integration

Easily connect SAP, MES, and other systems to your workflows

Custom Interfaces

The module adapts and scales with your specific requirements

Error-Free Processes

Automation minimizes manual errors and ensures efficient operations

Full Transparency

Centralized data management enables informed, reliable decisions

Work from Anywhere

Access processes anytime, from any device - securely and flexibly

Maximum Security

Clear user roles and protected data ensure complete control

Your path to error-free processes starts here

Permit processes today cost one thing above all: time, patience, and double the effort. Paper forms, approvals by phone, unclear responsibilities – and in the end, the documentation is often incomplete.

The Mularis Digital Permit module completely digitizes this process:

1. Permits are requested, reviewed, and documented directly in the system
2. Responsibilities are clearly defined – every step is audit-trail ready
3. All stakeholders access the same up-to-date information – across locations, systems, and departments

The result: No media breaks. No paper clutter. No more "Who approved...?"

With Mularis Digital Permit, you create a transparent, fully traceable approval process - seamlessly integrated into systems like SAP or Inmation.

Why approval processes often become bottlenecks – and how digital permits change that

In industrial operations, decisions are made every day: whether equipment can be serviced, lines released, or critical work may begin. But the path to that signature is often anything but efficient. Three common stumbling blocks include:

- » **Disconnected tools:** Paper forms, local Excel sheets, or isolated systems slow down coordination – especially when multiple departments or sites are involved.
- » **No centralized traceability:** Who approved what, when - and based on which risks? Without end-to-end documentation, responsibilities become unclear and audits turn into a guessing game.
- » **Unclear permission handling:** Missing or vague role definitions create gaps in the approval chain. Many systems lack the granularity to assign responsibilities cleanly and securely.

Mularis Digital Permit addresses these issues at the root – with an integrated digital system that clearly defines responsibilities, involves all stakeholders, and makes the entire approval process secure, auditable, and efficient.

How we stand out from the competition

Why our customers choose Mularis Digital Permit

Many systems promise digital transformation - but when it comes to approvals, many companies still rely on paper. Our module for approval processes tackles this exact issue: it replaces unclear responsibilities, manual handovers, and scattered documentation with a clear, digital workflow. Approvals are traceable, automatically documented, and securely managed - fully integrable into your existing system landscape.

The result is more than just structure – it's full control over every step in the process.

Clear workflows instead of manual handovers

- ✔ Standardized approval workflows ensure greater reliability in day-to-day operations
- ✔ Less coordination effort thanks to centrally managed processes
- ✔ Consistent documentation – traceable and transparent for all stakeholders

Always audit-ready

- ✔ Every approval fully documented – audit-compliant and GxP-ready
- ✔ Includes timestamps, user roles, and full change history
- ✔ Reduced compliance risks through systematic traceability

Seamlessly integrated - not just another system to maintain

- ✔ Connects with existing systems like SAP, Inmation, or MES
- ✔ No media disruptions - data flows continuously across all platforms
- ✔ Expandable with other Mularis modules, such as Shiftlog or Qualification Management

Accessible anywhere, ready to use immediately

- ✔ Web-based access - at the workstation or on the go
- ✔ No local installation required
- ✔ Ideal for decentralized teams and distributed sites

Secure by design - with clear responsibilities

- ✔ Precise role assignment – users see only what they're authorized to
- ✔ Protection of sensitive data through granular user permissions
- ✔ Full control over approval and return processes

Clear approvals. Clear decisions. Clear future.

Approvals may seem like a small step – but they're often the point where processes stall. Whether it's maintenance work, production interventions, or tasks in hazardous environments: without a structured approval, safe operations aren't possible.

Yet in many companies, these processes are still analog – done verbally or on paper. That leads to unnecessary follow-ups, missing traceability, and in the worst case, critical safety gaps.

This is exactly where Mularis Digital Permit comes in: A digital system that structures approvals, clearly separates roles, and documents every step transparently. No more isolated tools, email chains, or paper forms – instead, a robust foundation that's traceable, audit-ready, and fully integrable into your environment.

This isn't about digitalization for its own sake - but about targeted relief: less administrative overhead, clearly defined responsibilities,

and unified workflows.

The result:

- Responsible staff always know what's approved - and what isn't
- Inspectors get complete documentation without extra effort
- Your teams can focus on what really matters

As a strategic partner, the cts Group doesn't deliver off-the-shelf solutions – we work with the reality of your operations. We listen, integrate, automate – and ensure that every approval becomes fully traceable.
