High-protein, palatable pellet designed to stimulate rumen papillae development and encourage early intake in calves transitioning from milk.

Calf Starter contains a balanced profile of grains, roughage, protein, vitamins and minerals to supply essential nutrients to growing calves. This complete feed helps to support the early development of young calves, aiding in immune health, growth and rumen development.

Calf Starter is a highly palatable ration that aids in transitioning calves from milk to pellets and enhances the conversion of feed to weight gain. It also contains natural plant antioxidants to support immune health and aid in combating gut pathogens (such as Salmonella and E. coli) and coccidiosis to improve health and performance.

Contains a rumen buffer to help prevent rumen acidosis (grain poisoning).

AVAILABLE IN:

 20kg

 500kg

 800kg

 Bulk

Age Guide

Key Benefits

- All-in-one, highly palatable pellet to supply growing calves with essential nutrients.
- Promotes improved weaning weights.
- Optimised to aid in rumen development to improve the calves' nutrient absorption abilities.
- Contains a buffering agent to promote digestive health, help reduce the risk of ruminal acidosis and optimise feed conversion.
- Natural antioxidant support added to combat gut pathogens (such as Salmonella and E. Coli) and coccidiosis to improve health and performance.

Typical Nutritional Analysis (per kg fed)

NUTRIENT LEVELS	
Metabolisable Energy (ME)	12MJ
Crude Protein (min)	20%
Crude Fat (max)	4%
Crude Fibre (max)	11%
Starch (typical)	40%
NDF (typical)	20%
Urea	NIL
Salt (max)	1%
Calcium (min)	0.80%
Phosphorus (min)	0.36%
Magnesium (min)	0.20%

Ingredients selected from:

Cereals (and co-products), Legumes (and co-products), Vegetable Protein Meals, Calcium Carbonate, Salt, Molasses, Magnesium Oxide, Monocalcium Phosphate, Rumen Buffer, Essential Oils, and Harwood Grains Cattle Vitamin and Mineral Premix.

Feeding Directions

- Harwood Grains' Calf Starter is designed for calves from birth to 3 months of age as creep feed or for early weaning.
- Calves younger than 3 months of age should be fed a calf specific milk replacement and wean off of milk replacement once consuming 0.8-1kg per head per day.
- Transitioning from milk replacer to Calf Starter and hay/pasture should be done gradually over a minimum of 2 weeks.
- Introduce Calf Starter at 0.25kg per 50kg liveweight on day one. Increase by 0.1kg every three days to 1-2% of body weight.
- Offer free-choice access to fresh and clean water at all times.
- Feeders should be set at throat height to reduce wastage and regularly cleaned to reduce spoilage.
- Place feed and water sources away from each other to keep water clean.

For individual feeding directions, please reach out to us.
