

PROFESSIONAL FERTILIZER APPLICATION CALENDARS

For Warm and Cool Season Grasses

COOL SEASON GRASSES

Cool-season grasses such as Kentucky Bluegrass, Annual and Perennial Ryegrass, Fine and Tall Fescues, and Creeping Bentgrass, either on their own or in blended mixtures, are well-suited for climates where daytime temperatures typically range between 65 and 80 degrees during the growing season.

Fertilizer												
Pre-Emergent												
Post-Emergent												
Insecticide Prevention												
Insecticide Control/Treatment												
Starter Fertilizer (Seeding)												
Soil Amendment												

WARM SEASON GRASSES

Warm-season grasses include varieties such as Bahiagrass, Bermudagrass, Buffalograss, Carpetgrass, Centipedegrass, St. Augustinegrass, and Zoysiagrass, or mixtures of these types. These grasses perform best in regions where summer temperatures consistently range from 85 to 90 degrees throughout the growing season.
