

WRIST & THUMB BRACE

MEDIROYAL (SWEDEN) PROXI® PLUS THUMB

The Mediroyal Proxi® Plus thumb offers a unique combination of an individually made thermoplastic splint and a soft textile brace. It's made in the popular Neptune™ material that is breathable, hydrodynamic and quick drying. The 1,6 mm Immo Plus® thermoplastic has been laminated under the surface film and has been pre-molded to stabilize the CMC- and MCP joint of the thumb. The thermoplastic part provides excellent support and a low profile and can be adjusted individually without using water or a heat gun. Simply fold the thumb in order to make the fit tighter or open it up to make the size bigger. It's as simple as it sounds.

The new Proxi® Plus offers excellent stability in combination with high comfort and functionality. The design doesn't need any edging tape which makes it possible to adjust the shape by a pair of scissors. Avoid cutting exactly over the area where the thermoplastic piece has been integrated and over the hook closures. All other areas can be trimmed without restrictions. The 1,6 mm Immo Plus® thermoplastic as well as the reinforcement film will shape individually to the patient over time by the body temperature.

- Integrated 1,6 mm Immo Plus® thermoplastic for stability
 - Easy to adjust the fit
 - Low profile hook that can attach anywhere on the surface
- Available in Left and Right model.

Mediroyal Proxi® Plus combines the stability of an individually made thumb orthosis and the comfort from a soft brace and is design protected in several countries. Immo Plus is a registered trademark of the T-Tape Company Proxi® is a trademark of Mediroyal Sweden AB.
