Double Bond Carpet Gripper

2.5m lengths

20 per carton

6.5kg weight

PRODUCT SPECIFICATIONS

BBS's Double Bond Carpet Gripper was developed for double-bond installations and for areas where dampness or termites damage ordinary plywood.

There is no 'waterfall' effect at the wall edge in double-bond installations because of its 5mm height.

It is also ideal in basements, in commercial hospitality rooms, on public transport, in high humidity environments (such as the northern regions of Australia), in outdoor areas and on boats because the aluminium is not susceptible to rot or termites.

This gripper can also be used in high traffic areas without bare foot injury because of the 4mm 'hooked' pin height.

It comes in 2.5 metre lengths and is made of high strength aluminium. Each length has more than 500 pins which are angled forward for easier hooking and greater hold. Each piece is 25mm wide with both nail holes (every 110mm) and a gluing track for easy installation.
