

# Ezi-Clip™ Floating Floor System

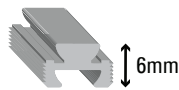

## #360 – Base

Nail or stick to subfloor

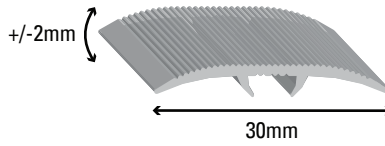

## #361 – Stackable Joiner

Stacks for height

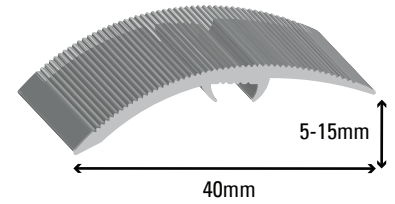

## #363 – 30mm Cover

+/-4mm expansion, both sides  
Up to 4mm height difference

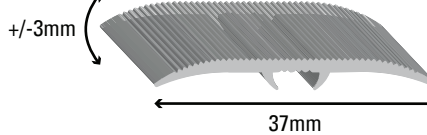

## #364 – 40mm Ramp

## #362 – 37mm Cover

+/- 4mm expansion, both sides  
Up to 6mm height difference

Score and bend to snap

All covers and ramps are available in Black, Silver, Rose and Mid Bronze

### Covers:

5mm

8.5mm

**1 Joiner**  
5 - 8.5mm flooring

8.5mm

12mm

**2 Joiners**  
8.5 - 12mm flooring

12mm

15.5mm

**2 Joiners**  
12 - 15.5mm flooring

### Ramps:

5mm

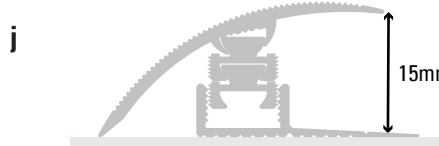

9.5mm

**1 Joiner**  
5 - 9.5mm ramping

9.5mm

15mm

**2 Joiners**  
9.5 - 15mm ramping

**Base:-** fixes the system to the subfloor

**Stackable Joiners:-** provides extra height for thicker floor coverings

**Covers:-** joins level flooring with an expansion gap. Pivots to ramp up to 6mm.

**Ramps:-** between flooring of different heights.

## INSTALLATION PROCEDURE

1. Score and snap the 'fin' to remove it from the Base if you require the same height on both sides of the Base
2. Nail or glue the Base to the subfloor at the floating floor perimeter, leaving a gap between the Base and any fixed object (like a wall).
3. Install the floating floor to the manufacturer's method. Allow the specified expansion gap at walls, in doorways and in the floor centre.
4. Cut the covering trim to length, mitring the corners as needed.
5. Cut the Joiner to the same length. Double or treble up the Joiner to reach the required level.
6. Slide the Joiner (doubled or trebled) into the underside of the covering trim.
7. Position the covering trim and Joiner over the Base track, then insert carefully by pressing down, starting at one end. Do not force it.
8. To lock, tap lightly with a mallet and block over the covering trim until the cover edges rest on the flooring surface.
