

Steel Plunge Dip

FEATURES

- Supplied as a complete kit - Dip, hard wood Walkout, Roof, Splash Guard
- The Dip is manufactured as a single piece with all joints and seams fully welded, ensuring structural integrity and simplified installation
- Installation of the Walkout, Roof and Splash Guard can be done on site
- The Roof and Splash Guard channels are positioned 2m higher than the Dip to prevent ground pressure and reduce the risk of potential cave-ins
- Prior to installation, we recommend for sand to be placed beneath the Dip and used for backfilling under the Walkout and along the sides, particularly in clay and black soils

SPECIFICATIONS

- 6mm thick stainless steel used for construction of Dip component
- Dip component fully welded (single-piece fabrication)
- External walls are ribbed horizontally and vertically with stainless steel flat bar
- Heavy-duty hardwood timber used for Walkout
- Splash Guard extends 2m above the waterline (manufactured using 1.6mm stainless steel)

OPTIONS

- 1,200mm wide (internal measurement)
- 1,500mm wide (internal measurement)

DIMENSIONS

- Overall Depth: 2.4m (allowing 2.1m water depth)

Trench Requirements (approx.)

- Length: 11.5m
- Width: 2.1m
- Depth: 2.5m
