INFORCE 3

Inforce 3® Intranasal

Protection against 3 major respiratory diseases, typically administered to calves but is safe for use in cattle of all ages over 3 days old. Inforce 3 comes in larger containers as well, but many dairies prefer the convenience of single dose bottles— one bottle, one calf.

(25) 1-Dose..... \$73.00

\$2.92 per dose (2 ml)

MASTITIS VACCINES

Boehringer
Ingelheim
J-VAC™

J-Vac®

Protection against mastitis caused by E. coli and against 2 types of endotoxemia. J-Vac can be safely administered to pregnant cows or at any stage of lactation, but a popular choice is at dry-off.

50-Dose \$102.00 \$2.04 per dose (2 ml)

Hard to get right now—some in stock but manufacture backorder until November once we run out.

SCOURS IMMUNITY

ImmuCell

ImmuCell

First Defense® Tri-Shield®

Protection against 3 major scours diseases for the first part of a calf's life: K99+ E. coli, Bovine Coronavirus, and Bovine Rotavirus. Effects last for up to two weeks, the most critical time in a calves life.

Box/12

TEAT SEALANT

LactoSeal®

LactoSeal is formulated just like other teat sealants but also contains Phenoxethanol, a powerful and safe antimicrobial. The antimicrobial action of LactoSeal provides the sealant with broad range protection against gram-negative and gram-positive bacteria and many other pathogenic and opportunistic microorganisms.

LactoSeal's unique properties offer a significant advantage over conventional products, providing secondary protection against new cases of mastitis during the dry period—without requiring any changes to existing protocols.

Another underrated feature is that the tubes are almost totally air-free, which helps to prevent splattering that goes up into the udder, or spotty coverage in the teat canal.

Pail/144 \$7.36/cow.....**\$265**

Cinnatube®

Internal teat sealant made of all natural ingredients including essential oils that keeps mastitis-causing pathogens out during the dry period. Approved for organic use.

Bag/36**\$137** **\$15.22** per cow

→ 1 Left for FREE dated 9/2026 ←

Lockout™

Lockout is an internal teat sealant that keeps mastitis-causing pathogens out during the dry period. Unlike other white teat sealants, Lockout's **blue color** makes it easy to see when it's all out at freshening time, potentially saving a service call or two to clean the teat sealant out of the equipment.

Pail/144 \$10.28/cow**\$370**

Blue Color makes stripping out easy at freshening

FOOTBATH CONCENTRATE

HealMax® "Copper"

HealMax Cu+ Footbath Concentrate is an all-in-one footbath additive designed to maintain control of digital dermatitis in dairy herds without relying on formaldehyde. Combining the targeted bacterial control of standard HealMax technology with the addition of copper sulfate, it helps preserve hoof tissue elasticity and hardness while supporting rapid recovery. The formulation remains fully active in low temperatures below 40° F (unlike formaldehyde) and maintains efficacy in the presence of organic matter, offering a consistent option for winter footbath management, but is perfectly suited for year-round use as well.

For the maintenance rate, mix the concentrate at a rate of 4 gallons HealMax Cu+ in 46 gallons of water. Run cows through the footbath for 2-4 consecutive days per week. Change footbath solution every 150 to 200 cow passes depending on manure load in the bath.

55 Gallon \$0.79/cow/week*...**\$720**
*3 days/week and 200 cow passes

Hoof-Zink

A highly concentrated liquid footbath product designed to replace copper sulfate and formaldehyde. It controls heel warts and foot rot. Unlike copper sulfate, field-applied waste delivers essential zinc back to forage crops without risk of soil toxicity or crop growth suppression. Run cows through footbath 3-5 consecutive days per week.

30 Gallon**\$777** **\$0.43** per cow per week (4 days/week and 300 cow passes)
