mental health organizations

A VIRTUAL LEARNING SERIES

Artificial Intelligence (AI) is rapidly changing how we work, communicate, socially engage, and even how we think. While AI has the potential to help solve complex issues, advance individual learning, and offer society huge benefits, there is a dark side to this technology. **This webinar series will explore how AI can pose risks to how children develop social relationships and even replace human to human interactions.**

The History and Development of Artificial Intelligence for Social Engagements

This webinar will discuss the developmental history and concepts behind Artificial Intelligence and how this technology evolved slowly at first. We will also explore how developers used knowledge of how the human brain works in the design and implementation of Artificial Intelligence on the social media platform.

Artificial Intimacy and the Advancement of AI in Building Relationships with Children

This webinar will explore how Artificial Intelligence has evolved to become more engaging with human users to the point where humans can develop feelings and attachments to AI characters. The webinar will specifically look at how this social AI advancement is affecting child and young users of this technology.

What are the Risks and Safeguards for AI Development in Social Relationships, and What Does the future of AI Look Like?

This webinar will focus on the risks and dangers of AI social engagement platforms specifically to children and young people. We will also look at what currently exists as safeguards to protect children, what tips parents can use to help protect their children, and what the future of AI technology is looking like based on market predictions.

These programs have been approved by the National Association of Social Workers - Tennessee Chapter (Provider Number: NASWTN2026-0046) for 1.5 CE units each.
