PLUMBING & ROOFING

(03) 5446 1535

Helping you to prevent blocked drains

- ✓ **Scrape hardened fats** into the organics bin before washing dishes.
- ✓ **Wipe greasy** pans with paper towel before washing. Dispose in organics bin.
- ✓ **Catch food scraps** by utilising a sink strainer. Clean the strainer regularly.
- ✓ **Avoid** putting **coffee grounds** in the sink. Compost or use organics bin instead.
- ✓ **Clean around** the **drain opening** regularly.

Little changes help to prevent *bigger* problems

Fats, oils and grease may look harmless when they go down the kitchen sink... but as they cool, they can stick to the inside of your pipes and build up over time. This can contribute to unpleasant odours, slow draining sinks, or complete blockages. If a blockage becomes severe, wastewater can back up through your plumbing and potentially result in sewerage overflow. **Spread the word around your household, create good habits.**
