SYSTEM FEATURES

- **Patented Design:** Exclusive manifold plate with patented channel design reduces tubing connections and simplifies installation.
- **High Capacity Tank:** Holds approximately 2 gallons of water without taking up a lot of space.
- **Compact System:** Space-saving design is ideal for undersink installations and uses a minimum of space.
- **Automatic Shut-Off:** Signals the system to stop making water until more is needed.
- **Maximum Production:** High performance T.F.C. Membrane with a rating of 50 gallons per day, (189 liters per day).

THREE HIGH PERFORMANCE FILTRATION STAGES

Stage 1

The Sediment/Carbon Prefilter

protects the automatic shut-off and Membrane from clogging with debris, but also filters out chlorine to protect the refined T.F.C. Membrane.

Stage 2

Reverse Osmosis

This is the heart of the system. The T.F.C. Membrane substantially reduces dissolved solids and other unwanted impurities.

Stage 3

Activated Carbon Filter

The final stage of filtration, an Activated Carbon Filter, reduces any remaining tastes and odors before the water reaches your glass, adding a final "polish" to your filtered water.
