

VOICE INPUT AS THE STANDARD

Efficient Documentation through Voice

Mrs. Meier laughed a lot during today's walk and sat at her favourite spot in the park.

Thanks to **mobile applications**, caregivers can easily and efficiently create reports, progress notes and handover documentation using voice input.

The **mobile app** supports multilingual voice input. Regardless of the spoken language, all entries are automatically translated into the facility's predefined language, linguistically optimized and documented in a consistent format.

In addition to the mobile app, a convenient **desktop application** is available for desktop PCs, tablets and laptops. Voice input is integrated with predefined templates, workflows and quality guidelines.

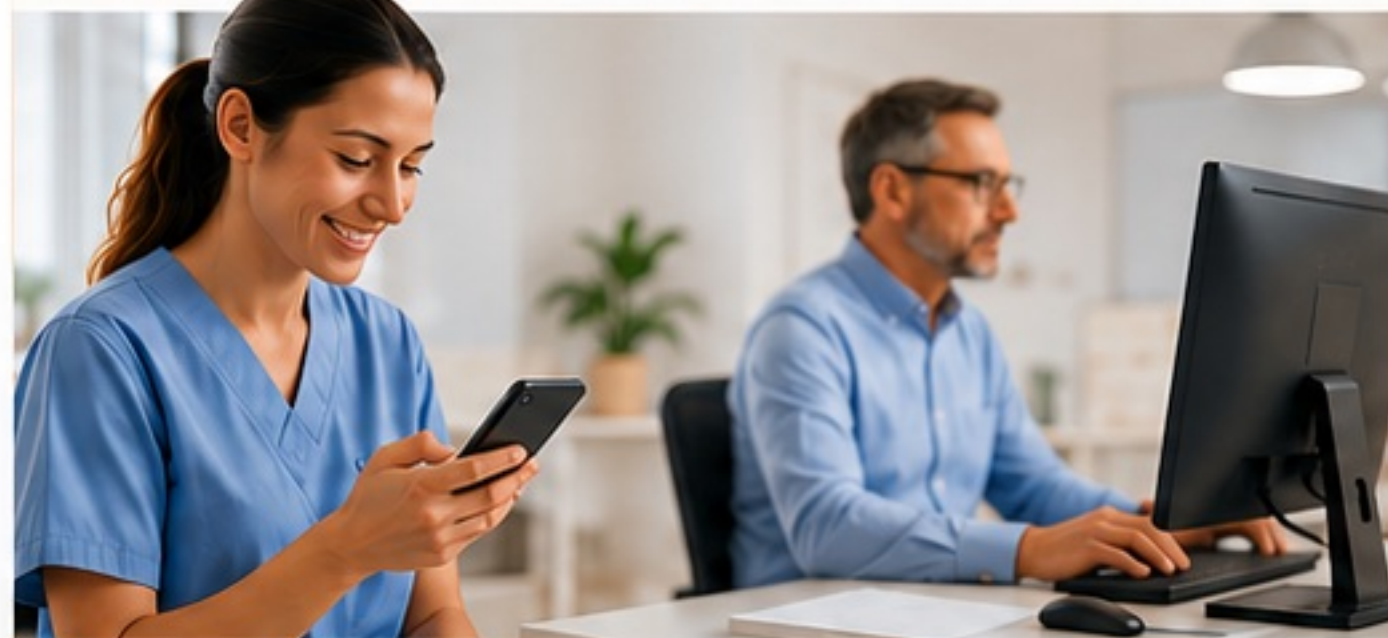

Voice solutions with **AI integration** create documentation according to the organization's standards, achieve more than 95% accuracy, and reduce documentation time by up to 80%.

MOBILE APP AND DESKTOP APPLICATION

Work Flexibly – Efficiently from Anywhere

Depending on the work situation, mobile or stationary devices are used. This simplifies workflows, provides greater flexibility and significantly improves efficiency.

Language barriers are becoming less important. Simple voice input creates more complete and meaningful reports while requiring less time. Documentation quality improves as administrative effort decreases.

Stress for employees is noticeably reduced. Documentation becomes easier, language barriers disappear, and staff can focus on what matters most: delivering high-quality care and support.

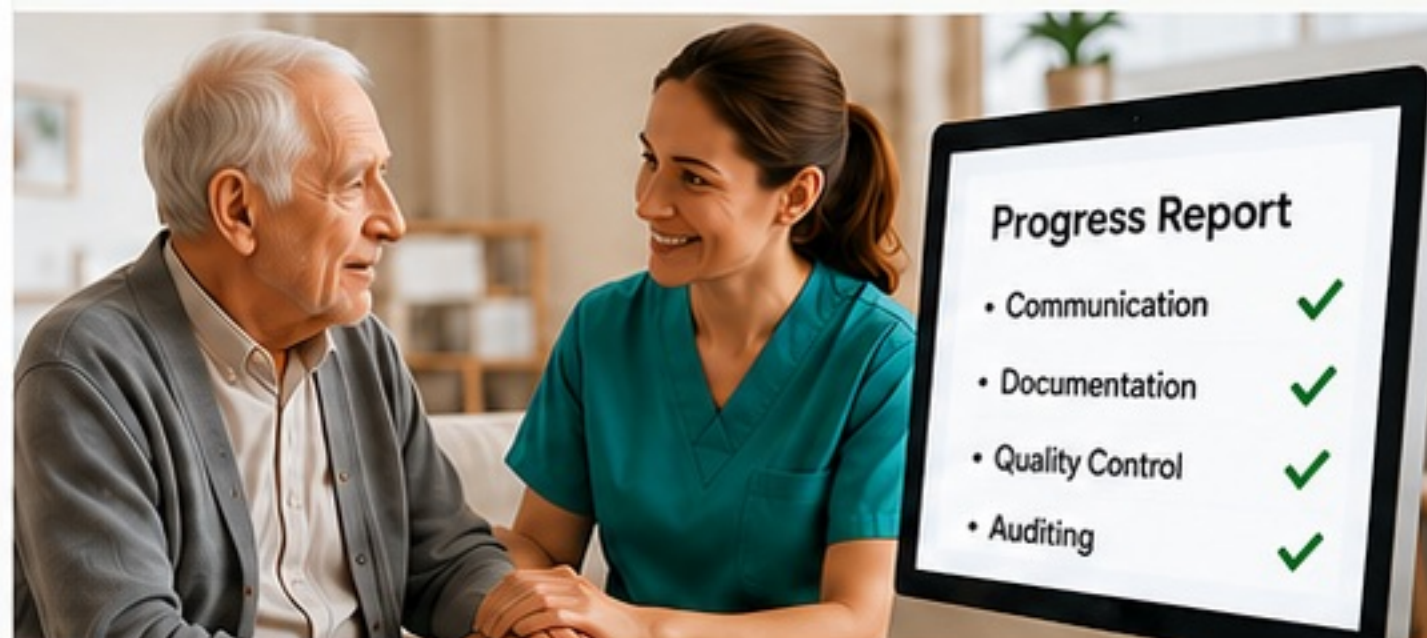

Improved documentation quality and enhanced reporting capabilities enable care providers and healthcare organizations to better demonstrate and visualize the quality of their work.

SPEECH AND TEXT OPTIMIZATION

Clear Communication – Better Quality

Communication: The simpler, clearer and less stressful communication is, the greater the satisfaction of employees, care recipients and their families.

Documentation: Accurate documentation with minimal effort reduces costs, improves quality and minimizes risks and conflicts.

Quality Control & Auditing: For both employees and the organization, it is essential that the extensive work performed is measurable and verifiable. AI makes this process simple while providing significantly more valuable information.

Up to 80% less documentation time through voice input

More than 95% accuracy in documentation

Multilingual and flexible in every situation

Better communication for everyone involved

Higher quality, security and transparency

More time for what matters most: people

THE BENEFITS AT A GLANCE
