

ST. VINCENT PALLOTTI HIGH SCHOOL
ANNUAL NOTIFICATION OF ASBESTOS MANAGEMENT PLAN AVAILABILITY
2026-2027 School Year

In 1987, the Environmental Protection Agency (EPA) issued final regulations for the Asbestos Hazard Emergency Response Act (AHERA), 40 CFR Part 763. These regulations require local education agencies to prepare Asbestos Management Plans for facilities that contain Asbestos-Containing Materials (ACM).

An Asbestos Management Plan must include the following elements:

- Results of Surveys and Assessments: Documentation of ACM in the facility, conducted by certified inspection personnel.
- Management Plan: A detailed plan for managing ACM in the facility, including time frames for removal if applicable.
- Operations and Maintenance Program: Procedures to avoid accidental disturbance of ACM during routine maintenance and to provide abatement services when required.
- Periodic Surveillance and Emergency Response Plan: A program for regular monitoring of ACM and a response plan to address unforeseen issues.
- Centralized Coordination: Provisions to ensure the coordination of all aspects of the asbestos management program.

This notification is being provided to comply with the public notification requirement of AHERA. The Asbestos Management Plan and the most recent inspection report for St. Vincent Pallotti High School are available for review in the main office.

It is important to note that both the EPA and the Maryland State Department of the Environment have stated that the presence of ACM in buildings does not inherently pose a health hazard. When ACM remains undamaged and undisturbed, it does not present a danger to workers or other occupants.

The St. Vincent Pallotti High School Asbestos Management Program ensures that ACM remains in good condition until it can be safely removed during major renovation, revitalization, or expansion projects.
