# SALE INFORMATION

## All Bulls Have

- Been tested by a ACV Accredited Vet for a Veterinary Bull Breed Soundness Evaluation (VBBSE) which includes a semen test.
- A crush side semen test result of 60% or above.
- A minimum Qualifying Pass Morphology result.

## All Registered Animals Have

- Had a Brangus Genomic Bundle (50K or 100K SNP, PV, Poll/Horn, Coat and Tenderness tests) completed.

## Agent Rebate

A 2.2% rebate (including GST) will be paid to outside agents introducing clients in writing to any of the selling agents, not less than 24 hours before the sale.

Rebates will be paid by the ABCA upon receipt of a tax invoice from the agent, indicating lots purchased by each nominated client within 30 days of the sale.

## Sale Committee

|               |                      |

## Disclaimer

Whilst due care and attention has been paid to the accuracy in the compilation of this catalogue, the Australian Brangus Cattle Association Ltd, the vendors, the selling agents and their representatives assume no responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this catalogue.

## Explanation of Herd Book Number and Registration System

### Registration Status

#### E – Enrolment Register

Eligible Cattle:

- Registered Brahman or Angus.
- F1 progeny of Angus or Brahman matings.
- Commercial Brangus - classified by ABCA Inspector.
- Any registered animal having Brahman content (BB) of less than 8% or more than 75%.

#### F – Foundation Register

- Progeny having one or both parents in the Enrolment Register and with Brahman content between 25% and 75% (with the exception of F1 progeny).

#### R – Registered Brangus

- Progeny of Foundation or Registered Brangus / Foundation or Registered Brangus.
- Must contain no less than 25% and no more than 75% Brahman content.

#### U – Registered Ultrablack or Ultrared

- Progeny of Ultrablack or Ultrared / Ultrablack or Ultrared.
- Progeny of Registered Angus (in Enrolment Register) / Enrolment, Foundation or Registered Brangus.
- Must contain no less than 8% and no more than 25% Brahman content.

BB% means Brahman Content percentage.

More information on breeding Brangus can be found at [brangus.com.au](http://brangus.com.au)

# DNA TERMINOLOGY

## What is a Brangus Bundle?

A Brangus Bundle consists of the following tests:

### 100K SNP

This is the extraction of the genomic data from the animal

### Parent Verification

When a parent/s of an animal being tested have DNA profiles Parent Verification can be reported

### Coat Colour

This tests identifies what coat colour genes the animal is carrying

### Poll

This tests identifies what Poll/Horn genes the animal is carrying

### Tenderness

This test gives the animal a 1-10 score for the tenderness genes the animal is carrying

## What is Parent Verification?

While mating dates and visual mothering up are useful tools in determining the parents of an animal, DNA Parent Verification is the only way to confirm the parentage.

DNA Parent Verification is a tool which should be relied on heavily by breeders who are selling animals for breeding purposes and for anyone who wants to have accurate pedigree records.

When the Sire and/or the Dam of animal has a DNA profile Parent Verification can be reported.

The lab compares the DNA of the calf to the DNA of the Sires and/or Dams nominated.

The lab is then able to verify if an animal is the Sire or Dam.

The lab is unable to 'find' the Sire of an animal using DNA, the lab can only compare the DNA of the calf to the DNA of the Sires or Dams nominated by the breeder at the time of testing.

The lab is unable to verify the Sire and Dam of an animal without being able to directly compare the calf to the Sire or Dam e.g. The lab cannot confirm the Sire of a calf by comparing it to another calf by the same Sire.

## Parent Verification Results

### Qualified

If qualified is shown next to a Sire or Dam it is indicating the the lab has confirmed that this is the parent

### Excluded

If shown next to a Sire or Dam it is indicating the the lab has confirmed that this is not the parent

If you have tested potential parents and the lab results qualify a different parent to the one listed on the database the office will automatically process the pedigree change.

## General

### N – Non-Carrier

DNA analysis is consistent with the subject NOT carrying the mutation tested

### C – Carrier

DNA analysis is consistent with the subject CARRYING the mutation tested

### A – Affected

DNA analysis is consistent with the subject carrying two copies of the mutation tested

### NR – No Result

## Coat Colour

|       |                              |
|-------|------------------------------|
| ED    | Homozygous dominant black    |
| ED/e  | Dominant black/recessive red |
| ED/E+ | Dominant black/wildtype      |
| E+/e  | Wildtype/recessive red       |
| E+/E  | Homozygous wildtype          |
| e/e   | Homozygous recessive red     |

## Poll

|                     |                                                                                                           |
|---------------------|-----------------------------------------------------------------------------------------------------------|
| PcPc, PcPf and PfPf | Homozygous poll                                                                                           |
| Hpc and Hpfp        | Heterozygous poll                                                                                         |
| HH                  | Horned                                                                                                    |
| NR                  | Failed test or due to unresolved haplotype (combination of HornPoll markers fail to produce valid result) |

## Steps To Register

Using your chosen device visit [www.stocklive.com.au](http://www.stocklive.com.au).

Click **BID** located next to the sale you wish to participate in.

### New Users

To create an account click **REGISTER**. Fill in your details, then click **CREATE BIDDER REGISTRATION**.

You will receive an email prompting you to confirm your account, create a password, accept Bidder Account T&C's & Privacy Policy.

Congratulations! Your StockLive account has been created.

### Existing Users

**LOGIN** and find the sale you wish to bid on, click **Request to bid** & **Accept terms to bid**.

### On Sale Day

Visit [www.stocklive.com.au](http://www.stocklive.com.au), when the sale is flashing **LIVE**, click **BID** to watch, listen & purchase.

Very well-balanced Regret son with a heap of length and style. Dam has a beautiful udder and plenty of milk. The youngest bull in our draft with plenty to offer.

## Tag well with Shearwell

Cattle NLIS & visual tags

NEW!

### NLIS Button Tag

**Easy to apply** with a super sharp spike to pierce the ear, not just punch through. **Less effort** for you, **less stress** on the livestock.

NLIS conditional accreditation.  
White for breeder, orange for post-breeder.

Shearwell  
Data

Livestock Systems

### Tag with **half the effort** and **NO hand strain!**

Designed to apply our NLIS Button tags and two-piece flag tags. Our unique and patented design provides a mechanical advantage, saving you time and energy.

### Two-Piece BOS Tag

Durable visual management tags with excellent retention rates. Customise your tags with a wide range of size, layout & colour options.

# UNDERSTANDING MORPHOLOGY

## Sperm Morphology

Morphology (anatomy) of the sperm has been shown to be one of the most important indicators of fertility in the bull and a very useful selection tool for improving herd fertility.

## What is semen morphology?

Sperm morphology refers to the shape, size and structure of the sperm. Sperm quantities and its ability to move forward and reach the egg (motility) is assessed crush side by the vet at the time of a bull test. A sample of the semen is placed into a small vial of preservative which kills, preserves and dilutes the sperm and other cells. The sample is later examined for morphology using a much higher power specialised microscope in a laboratory. The sperm are counted and 100 sperm are classed as either normal or abnormal, with the abnormal sperm being categorised into differing abnormalities.

## Why is sperm morphology important?

Morphology results can predict the sperm's ability to get a calf from the egg, and importantly, can pick up defects which may initially start to fertilise the egg but then fail to result in an ongoing pregnancy. Normal morphology has been demonstrated to be heritable, relatively repeatable (doesn't change much year to year), can be used to predict the number of calves the bull can produce and can even predict the fertility of his male and female offspring. The heifer's age at puberty and her time between calving and cycling again, can also be influenced by the morphology of her sire. The selection of bulls with high normal sperm morphology counts results in increased calving rates, tighter calving periods, reduced empty cows, increased weaning weights and faster rates of genetic gain. The stocking rate of bulls to females may also be lowered.

Bulls which do not qualify by morphology standards may still result in a large number of calves on the ground, but these calves may have come at a high cost. There may be an unacceptable high rate of empty or dry cows, and the cows may have lost one or two embryos during the mating season prior to maintaining pregnancy. The delays in achieving pregnancy result in smaller calves at weaning, and increased pressure on the cow to achieve pregnancy the following year as she has a shorter recovery time post calving.

## What about variations in sperm morphology results?

Semen is sensitive to extreme temperatures, stress and diet, so morphology results can also reflect recent illnesses, transport stress, lameness and high grain diets, all of which may have temporary or permanent effects on fertility. As a result, repeat tests may be required on bulls with defects on the initial exam. Some bulls are more sensitive to these stressors than others and their morphology and fertility can be affected more easily than others in the same mob exposed to the same stressors. Overall, morphology in mature bulls is largely repeatable, so the majority of bulls will have similar results on repeat exam.

Variations in results due to poor semen collection and handling are extremely rare and identifiable. VBBSE accredited veterinarians are trained to avoid these complications.

## What about young bulls?

Young bulls may occasionally have defect sperm which reflect their sexual immaturity. In this case, the defective sperm count often progress to become normal as the bull matures sexually. Part of the testicle responsible for making important changes to the sperm necessary for fertilisation, may not mature to function effectively until some bulls are 15 months old. When it is not yet functioning normally, proximal droplets and other defects are seen on the sperm. Sperm with these droplets fail to bind to the egg and when numbers of droplets are high, the normal sperm (without droplets) also fail to bind to the egg. These defects should be diminished by 18 months of age or may reflect a slower maturing bull or another reason that their testicles aren't functioning properly. Bulls which are sexually mature at a younger age are more profitable. They are useable earlier and their male and female offspring mature younger, increasing production rates.

## How can producers benefit from morphology testing?

Only purchase bulls that have passed a morphology test. Ask to see the actual morphology test results and select bulls with higher percentage normal. Bulls which fail to be sellable at the morphology stage are an expense to the breeder, but the benefits of this step to the purchaser are considerable for their production and herd fertility. Breeders selling morphology tested bulls should be proud of their high standards which will be reflected in the long term quality of their product and in their reputation.

## THANK YOU

Thank you to our sponsors for your generous support of the 50th Annual Rockhampton Brangus Sale.  
We send our warm thanks and appreciation and hope you know how much you are valued.

Brangus Australia and Rockhampton Brangus Sale Vendors  
wish to thank you for your interest and appreciate your attendance.

We wish all Buyers the best with their purchases  
and look forward to seeing you in 2027.

# BREEDPLAN

BREEDPLAN EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

## Brangus BREEDPLAN

A BREEDPLAN Guide to Interpreting EBVs outlines how to assess and compare the genetic merit of animals. Please note that only EBVs from the same BREEDPLAN analysis can be directly compared. The Australian Brangus Cattle Association publishes the following BREEDPLAN EBVs:

**Gestation Length (days):** Bulls with lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

**Birth Weight (kg):** Bulls with lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty.

This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

**200, 400 & 600 Day Weight EBVs (kg):** Bulls with larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

**Mature Cow Weight (kg):** Bulls with larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

**Milk (kg):** Bulls with higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

**Scrotal Size (cm):** Bulls with larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

**Carcase Weight (kg):** Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcass weights.

**Eye Muscle Area (sq. cm):** Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

**Rib and Rump Fat EBVs (mm):** Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter progeny, relative to carcass weight. The desire for more or less fat will depend on the finishing ability of your animals.

**Retail Beef Yield (%):** Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat (%):** Bulls with higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

# BRANGUS SELECTION INDEX

Selection Indexes assist beef producers to make selection decisions that take into account the relevant growth, carcass, fertility and efficiency attributes of each animal to identify candidates whose progeny will be the most profitable for a particular commercial enterprise.

Selection indexes provide an overall indication of an animal's genetic value for profit in a specific production system/target market and are calculated based on weightings placed on individual traits that are deemed to be important for that production system.

The weightings are calculated using BreedObject software that analyses all sources of costs and income for the production system represented by each selection index.

As such, selection indexes account for both sides of the profit equation and reflect the short and long term profit possible through selection of superior genetics.

For example, short term profit can be generated by a bull through the sale of his progeny, and the longer term profit generated by his daughters in a self-replacing cow herd.

## Best Practice Guide to Animal Selection Using Brangus Selection Indexes

Incorporating selection index information into breeding decisions takes the hard work out of trying to decide how much emphasis you need to put on individual EBVs when determining which animals you want to retain in your herd or purchase. The recommended strategy for selecting animals is to complete the following steps:

1. Identify the selection index of most relevance to your or your client's breeding objectives. This decision should be aided by the index descriptions at the end of this document.
2. Rank animals on the chosen selection index. This can be done via the web search facility available for the breed.
3. Consider the individual BREEDPLAN EBVs of importance. All breed level selection indexes are designed for the average of the production system specified in their description. This means that individual farm environments and management choices may require that their own thresholds are applied. For example, if looking for a bull to use over heifers, particular attention should be paid to Calving Ease and Birth Weight EBVs.
4. Consider other traits of importance. Structure, fertility (e.g. BULLCHECK™), temperament, genetic conditions and pedigree are all important additional considerations.

## Available Brangus Selection Indexes

The Australian Brangus Cattle Association Ltd. currently reports two different selection indexes.

These are the:

- Domestic Steer Index
- Export Steer Index

Each selection index is reported in units of net profitability per cow mated (\$), and relates to a self-replacing Brangus herd. In addition, each selection index targets the following specifications:

### Domestic Steer Index

- Self-replacing commercial herd targeting the domestic trade.
- Temperate environment.
- Selected heifers are retained for breeding so maternal traits are important.
- Steer progeny are pasture grown and finished on grain for 75 days.
- Steers target 490 kg live weight (265 kg HSCW & 10 mm P8 fat depth) at 15 months of age.

### Export Steer Index

- Self-replacing commercial herd targeting the export trade.
- Tropical environment.
- Selected heifers are retained for breeding so maternal traits are important.
- Steer progeny are pasture grown and finished on grain for 75 days.
- Steers target 620 kg live weight (325 kg HSCW & 16 mm P8 fat depth) at 30 months of age.

# MEMBERSHIP

The Australian Brangus Cattle Association Ltd offers three membership categories to new members.

The membership categories are:

## Full Membership

Ideal for those who wish to participate in breeding quality registered Brangus & Ultra animals and record their pedigree.

Full members are eligible to sell stock at ABCA sales, participate in Brangus Group BREEDPLAN, vote at ABCA meetings and in elections as well as receive the Spring and Autumn magazine, information regarding shows, sales and activities organised by ABCA.

Each Full member is required to record a prefix, brand and ID for their herd, which will be unique to their membership. All animals registered by that member will use the prefix and ID in their identification.

## Commercial Membership

Designed for people with an interest in the Brangus breed that do not wish to register or record cattle.

Commercial members receive all ABCA publications (including the Spring and Autumn magazine), utilise ABCA marketing initiatives and can list cattle for sale on the Brangus Australia website.

Commercial members may record their prefix, brand, ID and record performance pedigree animals with the ABCA. Commercial members may record and can also performance test their cattle through Brangus BREEDPLAN. Commercial members cannot register animals and cannot vote.

## Youth Membership

Youth membership is a restricted membership category to enable youth to commence breeding Brangus and/or participate in self-development programs.

Youth membership shall be accepted up to the age of 25 years old. Youth members who wish to register cattle will be required to record prefix, brand and ID for their herd.

## Life Membership

The Directors of the Australian Brangus Cattle Association Ltd. may bestow Life membership upon a member that has made an outstanding contribution to the breed.

More information on breeding Brangus or joining the Brangus Association can be obtained at [brangus.com.au](http://brangus.com.au) or you can call the office on 02 5775 9900 and an enquiry kit with an application form will be sent to you.

|                                                             | FULL | COMMERCIAL | YOUTH |
|-------------------------------------------------------------|------|------------|-------|
| Record and register cattle                                  | •    |            | •     |
| Record commercial cattle                                    |      | •          |       |
