

Global Warming and CO₂: Canada

Global Warming is not a crisis, nor is it caused by CO₂ emissions.

- **Canada's climate has not materially changed over the last 120 years..**
- **The global impact of Canada going "Carbon Neutral" has a negligible global impact and is very costly.**
- **Canada has 594.7 billion trees. Only 25.7 billion trees are needed to capture all of Canada's CO₂ emissions. Canada's lakes absorb even more CO₂ than these trees. Canada does not contribute globally to net global CO₂ emissions.**
- **Spending \$multi-billions on Canada going "Carbon Neutral" doesn't add up.**

Global Warming and CO₂

Introduction

Given my background as a professional geologist and geophysicist who spent my career studying climate change implications, I was surprised by claims that mankind was causing a climate change crisis. I am aware of prior ice ages, climate change and changing sea levels that occurred well before mankind arrived. I am also aware that CO₂ is critical for plant life. I also listened to Jordan Peterson talk on speaking the truth. [Dr. Jordan Peterson: SPEAK THE TRUTH!](#)

This drove me to research this subject in much more detail.

"The ignorant person affirms, the scientist doubts, the wise person reflects." — Aristotle

I offer you this material, along with connections to more extensive reports for your consideration.

CO₂ Coalition interview with Graeme Phipps [Feed | CO₂ Coalition Discussion Group](#)

Global Warming and CO₂

Introduction

This presentation shows the results of my research into this subject, obtained from 45 books, 532 articles, 238 videos and 80 well-respected and competent scientists and professionals, all listed at the end of the presentation. The results of my ongoing analysis are contrary to what is being said in mainstream media and have important implications for future Government actions.

Please consider this quote from Tolstoy's 1894 treatise "The Kingdom of God is Within You" where he states: **"The most difficult subjects can be explained to the most slow-witted man if he has not formed any idea of them already, but the simplest thing cannot be made clear to the most intelligent man if he is firmly persuaded that he knows already, without a shadow of a doubt, what is laid before him".**

This presentation summarises findings relevant to Canada. For the complete presentation:

Global Warming and CO₂

Is present Global Warming a man-made or a natural phenomenon?

**PRESENT WARMING IS NATURAL –
WE'RE RECOVERING FROM THE ICE AGE**

ARE WE IN
A LONG-TERM
NATURAL
CYCLE?

SINCE 1894, JERSEY'S
MEAN TEMPERATURE HAS
CHANGED BY ONLY **1.5°C**

A SMALL CHANGE
A LONG PERIOD.

NATURAL CYCLES HAVE ALWAYS SHAPED OUR CLIMATE.
OUR WARMING SO FAR IS MODERATE AND MANAGEABLE.

Global Warming and CO₂

Global warming is a normal, nature-driven phenomenon; climate has always changed

- Predictions of climate doomsayers reveal an ignorance of a geological history shaped by natural forces too powerful for human control and too complex to allow for meaningful forecasts.
- We are living in the warmth of an interglacial period known as the Holocene Epoch, which began about 11,700 years ago. It followed a frigid span of nearly 90,000 years, when thousands of feet of glacial ice covered the northern portion of the Northern Hemisphere. Temperatures were lower than the current average by 11 to 14 degrees Fahrenheit.
- The relatively benign Holocene of nearly 12 millennia has been punctuated by intermittent temperature changes, including 10 warming periods, counting our current one. The most recent era of cold was the Little Ice Age from about 1250 to 1850.
- Climate alarmists treat the "preindustrial" era before 1850 as their starting point for measuring modern temperature, without noting that the period falls within the last gasp of the Little Ice Age. Their hysteria and the climate policy they promote are based on a temperature record that begins during a period of unusual cold and on a subsequent warming of a modest 2.4 degrees Fahrenheit over the last 175 years.
- If the temperature record were expanded to take in the warmest parts of the Holocene, the same planet would be seen as emerging from an intermediate deep freeze. Marine sediment cores place peak warmth in the first half of the Holocene interglacial, between 10,000 and 6,000 years ago.

Climate's Past Performance Uncertain Predictor of Future by Vijay Jayaraj

Global Warming and CO₂

Global warming is a normal, nature-driven phenomenon; climate has always changed

- Records from sediment cores show minimal sea ice during the early Holocene, short-term fluctuations through the middle Holocene, and a marked expansion of ice over the past 4,500 years.
- Two thousand years ago, Roman farmers grew grapes and grains at higher latitudes and altitudes that later generations had to abandon because of advancing cold. During the more recent Medieval Warm Period – about 1,000 years ago – Norse settlers lived in southwestern Greenland for close to five centuries, grazed livestock, harvested barley, and buried their dead in churchyard ground that later froze solid and stayed frozen. Tree stumps continue to appear from beneath retreating glaciers in the Alps and the Canadian Arctic, in soil in the warmth of the middle Holocene.
- Then came the temperature decline that was accompanied by horrific consequences for humanity. The Little Ice Age closed Alpine passes, swallowed farms, killed harvests across northern Europe and emptied Greenland settlements. Rivers that had not frozen in human history became sites of ice fairs. Two independent temperature reconstructions drawn from Greenland ice and from ocean sediments off Indonesia, sit 9,500 miles apart and yet record a fall of around 5.4 degrees Fahrenheit between the Holocene peak and the coldest of the Little Ice Age.

Global Warming and CO₂

Global warming is a normal, nature-driven phenomenon; climate has always changed

- While broad historical climatic trends can be identified, predicting the future with confidence is tricky at best. Ocean oscillations in the Pacific and Atlantic redistribute heat on decadal and centennial clocks that nobody can predict. Solar output varies. Volcanoes intervene on no schedule. Cloud behavior, the single largest uncertainty in every atmospheric model, responds to all of it. These assemblages of water vapor and aerosols act both as insulators against the loss of nighttime heat and as reflectors sending sunlight back to outer space.
- All are mighty forces, along with many others, that operate irrespective of human activity, whose effects are negligible on the grand scale of a climate system of practically infinite complexity.
- In the end, what we know is that warmth is better than cold when it comes to human flourishing and that abundant, added CO₂ improves plant growth and affordable energy is necessary to build and sustain prosperous societies. In the meantime, the Holocene climate will keep doing what it has always done, and we will know what that is after it has happened.

Global Warming and CO₂

Is Global Warming a Man-Made Crisis Caused by Increased CO₂ Emissions?

A clear relationship exists between global population growth and atmospheric CO₂ levels, reflecting increased human activity. However, the temperature response does not display a corresponding relationship. Nor is the claim of a recent Climate Crisis unique to our present time.

Carbon Dioxide Concentrations and Population Growth

Atmospheric CO₂ and Accumulated CO₂

2024 Annual GWPF Lecture - Judith Curry - Climate Uncertainty and Risk ...

Carbon dioxide concentration versus global population growth using data for periods starting at 1740 (CO₂) and 1900 (population), data for both to 2023. Graphs extrapolated to 2100. Reference Ian McNaughton

Global Warming and CO₂

Is Global Warming a Man-Made Crisis Caused by Increased CO₂ Emissions?

The claim that extreme weather, wildfires, droughts, and heat are spiralling out of control does not hold up. Isolated disasters still happen. That is not the same as a planetary breakdown. Meanwhile, the measures that matter for human welfare have moved in a positive direction. Life expectancy has risen. Agriculture has become more productive. The planet has greened as atmospheric CO₂ has increased, because CO₂ is plant food, not poison.

CO₂ is not a pollutant but a trace atmospheric gas necessary for plant photosynthesis and all life. Higher concentrations increase plants' growth and drought resistance. About 70% of global greening confirmed by NASA satellites has been attributed to CO₂'s fertilization effect. Greenhouses routinely increase CO₂ levels to boost crop yields.

Humanity has become far more capable of adapting to environmental challenges. Wealth, technology, and reliable energy have reduced vulnerability. Policies that starve developing countries of affordable fossil fuels do not protect the poor but rather expose them to injury, poor health, and early death. Look beyond the narrative. Examine the data. Discover where the evidence leads.

[Beyond the Narrative and Following the Data with Vijay Jayaraj | Climate Debrief](#)

Global Warming and CO₂

Is Global Warming a Man-Made Crisis Caused by Increased CO₂ Emissions?

Feynman's Wisdom and the Facts About CO₂

"No government has the right to decide on the truth of scientific principles," wrote Nobel laureate Richard Feynman in *The Meaning of It All*. To sharpen the point, a legislature can fund research, an agency can set rules, a court can weigh evidence, but none of them can vote a physical law into being or out of existence.

A principle is true if predictions match what is measured and false if they do not. Consensus, peer review, and an official summary do not change the measurement. Feynman's warning was that once government treats a scientific claim as settled, dissent stops being a test of the claim and becomes a political offence.

Rising CO₂ has increased global plant growth and crop yields, especially in dry regions where plants use water more efficiently. Satellite records show a greener planet, and hundreds of studies document gains in food production from higher carbon dioxide.

We must adhere to the scientific method and secure abundant energy, higher crop yields, and the plant growth that comes with more CO₂.

Global Warming and CO₂

Key Findings

- 1) Increased CO₂ in the atmosphere is beneficial and not damaging to the world; added CO₂ increases plant growth (CO₂ is essential for plants), especially in desert areas (the world is greening) and significantly improves plant and crop yields. Carbon dioxide has two relevant properties, as a creator of food and oxygen, and as a greenhouse gas
- 2) Climate change is a very complex system with CO₂ as a greenhouse gas playing a very minor role
- 3) Adding CO₂ i) is not causing increased extreme and dangerous weather events and are not increasing compared to historic occurrences, ii) has reached a saturation level; doubling prior CO₂ levels is required to make the same minor climate impact, and iii) does not cause runaway temperature issues
- 4) Over the course of the last 2,000 years, there have been at least 3 verifiable extended periods global temperatures increased without any impact of 'man-made CO₂ emissions' - the Roman Warming (250 BC - 450 AD); the Medieval Warming (900 - 1300 AD) and the Late 20th Century Warming (1850 - present), along with two extended cooling periods - the dark Ages Cooling (535 - 900 AD) and the Little Ice Age (1280 - 1850),; what's happening is not unusual.

This presentation asks and responds to 11 questions regarding global warming and CO₂ impacts, with a section on each question including factual information supporting the conclusions to each question.

Global Warming and CO₂

Quotes from reputable, knowledgeable individuals

- 1} "Global warming is part of a natural cycle and there's nothing we can actually do to stop these cycles. The world is now facing spending a vast amount of money in tax to try and solve a problem that doesn't actually exist." Dr David Bellamy, Jan 18, 1933 – Dec 11, 2019, was an English academic, botanist, television presenter, author and prominent campaigner in the UK. pic.x.com/WU1ZHimrr8
- 2) "There is no Climate Catastrophe.. We are making ourselves poorer, less secure, dependent on our enemies to achieve nothing except feeling good about how virtuous we are." Konstantin V. Kisin is a British political commentator, author and co-host with Francis Foster of the *Triggernometry* podcast. [The Truth About 'Climate Science' | Konstantin Kisin](#)
- 3) "The real environmental emergency isn't the modest warming that has helped humans thrive. It's land degradation, poisoned water and other forms of pollution that are burying the Global South alive. We've been fighting the wrong environmental war." Dr Vijay Jayaraj is a Science and Research Associate at the CO₂ Coalition with postgraduate degree in Energy Management Robert Gordon University, UK, an MS in Environmental Sciences University of East Anglia, UK, a BS in Engineering Anna University in India [Real Environmental Crisis Is Not Climate Change - CO₂ Coalition](#)
- 4) "Two prevalent myths are damaging our economy and hurting the less fortunate: 1) that greenhouse gases, chiefly carbon dioxide, are causing dangerous global warming; and 2) that wind and solar can easily replace fossil fuels, nuclear, and hydro in electricity generation. Both are false yet widely accepted. " Thomas S. Drolet has had a 57-year international career in many phases of Energy, including Nuclear Power, Fusion Power, Nuclear Fuel Supply, major projects in Coal, Natural Gas, Distributed Generation, Oil and other Renewables (Geothermal, Hydroelectric, Solar and Biomass).
- 5)' World Climate Declaration: THERE IS NO CLIMATE EMMERGENCY signed by 2,000+ scientists

Global Warming and CO₂

Extreme weather events are overstated

Extreme Weather and Climate

The failure of the public to get excited over a degree or two of climate warming has led the environmental alarmists to turn to extreme weather events.

However, the claims of increases in extreme weather are made for the simple purpose of frightening the public. However, even the IPCC acknowledges that there is no empirical evidence for such a connection. Moreover, outside the tropics, the claim runs opposite to what accepted theory implies.

Outside the tropics, the main process in generating weather disturbances is known as baroclinic instability: an instability whose energy is proportional to the horizontal gradient in temperature. Globally, the strength of this instability depends on the temperature difference between the tropics and high latitudes. In a warmer world, this difference is expected to decrease or not increase.

We should expect less extreme weather events in a warmer world.

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

1) Claim: [The 130-Degree F Reading in Death Valley Is A World Record](#)

Con: 134 degrees in 1913 is still the official record and there is no reason to change it.

2) Claim: [The Global Temperature Record Says We Are in a 'Climate Emergency'](#)

Con: The widely cited NASA global temperature graph is highly misleading, *displaying just the small change of 1.1°C of temperature, which is highly magnified to show the trend. Because this small temperature change is magnified, it gives the false impression of having a steep rising slope.*

3) Claim: Antarctica And Greenland Ice Melt Concerns

Con: The Antarctic continent has not warmed in the last seven decades. Antarctic sea ice area has modestly expanded.” <https://www.nature.com/articles/s41612-020-00143-w>

4) Claim: [Climate Change is Causing Accelerated 21st Century Surface Warming](#)

Con: Most Observed Warming is Natural. Almost half of the global warming in the 21st century is due to El Niño events

5) Claim: [Climate Change is Increasing the Strength and Frequency of Hurricanes](#)

Con: Hurricanes are Not Getting Worse

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

6) Claim: [Climate Change Will Increase the Number and Severity of Tornadoes](#)

Con: Tornadoes are Getting Less Dangerous

7) Claim: [Climate Change vs. Crop Production](#)

Con: Food Production is Growing and Safe. As global climate modestly warms, U.S. and global crop yields are setting new records almost every year.

8) Claim: [Climate Change is Causing Floods](#)

Con: Flooding is Not Increasing. The [U.N. IPCC admits](#) having “low confidence” in even the “sign” of any changes.

9) Claim: [Global Warming is Causing Cold Spells](#)

Con: Extreme Weather has always occurred. Global warming does not cause an increase in the frequency or severity of cold weather events

10) Claim: [Ocean Acidification](#) is a concern

Con: Seawater is Alkaline and the Changes are Miniscule and Harmless

11) Claim: [U.S. Heat Waves are Getting Worse](#)

Con: Heat Waves are Not Increasing. Claims of increased [U.S. heat wave frequency and length](#) are often misleading because they ignore the worst US heat waves in the 1930s

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

12) Claim: [U.S. Temperatures are rising dramatically](#)

Con: There has been no significant warming in the United States since at least 2005.

13) Claim: [We Need to Limit Global Warming to 1.5 Degrees C°](#)

Con: These Temperatures Are Not Abnormal or Dangerous

14) Claim: [Great Lakes Water Levels are falling due to Climate Change](#)

Con: The Great Lakes are Doing Fine. The Great Lakes are currently benefiting from record-high water levels.

15) Claim: [Droughts are Increasing Due to Climate Change](#)

Con: Droughts are Not Getting Worse. Currently, the United States is benefiting from fewer and less extreme drought events as the climate modestly warms.

16) Claim: [Is The US surface Temperature Record a Reliable Indicator of Warming?](#)

Con: Too Many Stations are Compromised And Not Maintained. A study in 2009 showed that almost 90% of weather stations used to measure climate in the USA have been compromised by urbanization effects

17) Claim: [Great Lakes Water Levels are falling due to Climate Change](#)

Con: The Great Lakes are Doing Fine. The Great Lakes are currently benefiting from record-high water levels

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

18) Claim: [Droughts are Increasing Due to Climate Change](#)

Con: Droughts are Not Getting Worse. Currently, the United States is benefiting from fewer and less extreme drought events as the climate modestly warms.

19) Claim: [Is The US surface Temperature Record a Reliable Indicator of Warming?](#)

Con: Too Many Stations are Compromised And Not Maintained. A study in 2009 showed that almost 90% of weather stations used to measure climate in the USA have been compromised by urbanization effects.

20) Claim: [Measuring the Earth's Global Average Temperature is a Scientific and Objective Process](#)

Con: Surface Temperature Records are Distorted. Broad areas don't have any temperature measurements being made, now or in the past. In order to get a global temperature average, scientists interpolate data from surrounding areas that have data. When interpolation is done, the measured global temperature actually increases.

21) Claim: [Greenland Ice Melting Will Cause Dangerous Sea Level Rise](#)

Con: The Amount Of Melting Ice Isn't Significant. Claims that the Greenland ice sheet is melting six times faster than it was 30 years ago. Thirty years ago, the Greenland ice sheet was barely melting at all.

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

22) Claim: [Coral Reefs are Dying Because of Climate Change](#)

Con: Coral reefs are thriving around the globe. Since the peak of the last glacial maximum [33-26 thousand years ago](#), global average temperature reached its highest point approximately [7,000 years ago](#), at least [1 or 2 degrees C higher than today](#), during which coral reefs thrived.

23) Claim: [Sea Level Rise is Accelerating Dramatically](#)

Con: Ocean tide gauge data shows that the sea level trend has not changed in over 100 years, and show no signs of drastic acceleration.

24) Claim: [El Niño](#) and The Warming They Bring Are Intensified By Climate Change

Con: El Niño's are a natural phenomenon and of little concern

25) Claim: [Tipping Point – 1.5 Degrees Celsius Warming](#)

Con: 1.5 degrees is unnoticeable and not a threat

26) Claim: [Climate Sensitivity](#) is a concern

Con: Climate Sensitivity is Likely Low Enough to be of Little Concern.

27) Claim: [Water Levels – Lake Tahoe](#) concerns

Con: Lake Tahoe Levels Are Fluctuating Normally

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

28) Claim: [Coal Pollution Can Be Seen Pouring From Power Plant Smokestacks](#)

Con: Photos are pure propaganda, blatantly and deliberately deceiving readers. Those black, deadly-looking plumes of “emissions” are really condensing steam. Plumes of condensing water vapor normally look white and benign, but by artfully choosing a vantage point to the east of the plant, and a time just after sunset, *the photographers manage to make the pretty white plumes of harmless steam look black and threatening.*

29) Claim: [Climate Models have Accurately Predicted 30 Years of Warming](#)

Con: Global Ocean Temperatures are Warming at Only ~50% the Rate of Climate Model Projections

30) Claim: [Urban Heat Islands Do Not Exaggerate Global Warming](#)

Con: Urban Heat Islands Distort the Temperature Record. The majority of U.S. temperature stations utilised for temperature records have been compromised by encroachment of artificial surfaces like concrete, asphalt, and buildings. This creates a substantial false warming trend that is responsible for almost half of reported U.S. warming.

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

31) Claim: [We are in the 'Hottest Ever' Period Due to Climate Change](#)

Con: Earth has experienced much warmer periods in the past than we have today. In the recent past global mean temperature appears to have risen by as much as 9-14°F (5-8°C) to an average temperature as high as 73°F compared to the 20th century global average of 56.7°F. Earth's average surface temperature over the past 500 million years showed that for most of the time, global temperatures appear to have been too warm for polar ice caps.

32) Claim: [Instrumental Temperature Records Demonstrate Man-Made Global Warming](#)

Con: Earth has been emerging from a period known as the Little Ice Age as long as we've been measuring temperatures

33) Claim: [Unprecedented Heat Wave in Pacific Northwest was Driven by Climate Change](#)

Con: A rare heat wave, but cannot be attributed to climate change. *The atmosphere is churning with all kinds of variability inherent in the physics of the atmosphere (also called natural variability).*

Global Warming and CO₂

Extreme weather events are overstated

35 Claims of False Extreme Weather and Climate

34) Claim: [Increase in U.S. Wildfires Due to Climate Change](#)

Con: Wildfires are far less frequent and severe than was the case throughout the first half of the 20th century.

35) Claim: [2023 Was Earth's Hottest 12 Months in 125,000 years](#)

Con: Temperatures were warmer than the present for much of the past 10,000 years

Global Warming and CO₂

[Cooling Doomsday Rhetoric Affords Rational View of Climate | Newsmax.com](https://sealevel.info/Unsettled-Climate) Larry Bell

<https://sealevel.info/Unsettled-Climate> Changes Real Story-NewsMax and the CO₂ Coalition-2026-with ads.mp4

What is Canada's climate situation and the threat of a "Climate Emergency"?

Canada's mean daily maximum temperatures since recording began show only a 1 to 2 °C mean change over the last 120 years; hot summer days and cold winter nights change of over 6°C

- Canada's annual average air temperatures taken from Victoria BC, North Battleford, Saskatchewan and Moncton, New Brunswick sites since 1900 show about a 1 to 2 Celsius increase over the last 120 years.
- At these rates, the impact on Canadian temperature over the next 100 years would be about 1 ° C.
- Canadian daily temperatures in major populated areas have ranged from winter night lows of -30C to summer day highs of +30C+ without serious issues
- A change of 1 °C against daily seasonal ranges of up to 60 °C is not a "Climate Emergency"!
- **Canada's Annual Mean of the Daily Maximum Temperatures 1900 to 2018**

Victoria, British Columbia

North Battleford, Saskatchewan

Moncton, New Brunswick

What is Canada's climate situation and the threat of a "Climate Emergency"?

Western Canadian Temperatures Show Cyclic Variations Unrelated to CO₂ Increases

Radiosonde (aka weather balloon) data show that the lower tropospheric air temperature over Western Canada continues to exhibit a cyclical trend.

**Annual Averaged Lower Tropospheric Winter Season Air
Temperatures for Western Canada NCEP Reanalysis
(135W – 100W x 60N – 48N, 925 mb)**

What is Canada's climate situation and the threat of a "Climate Emergency"?

Canada's CO₂ emissions are very small. Other countries are significantly increasing CO₂ emissions

The International Energy Agency 2022 Coal Report documented that in 2021–22 global coal demand increased by 3.2% and for the first time passed 8 billion tons. Coal use in electricity generation is globally at an all-time high.

Carbon emissions: Canada vs. China

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Global warming is slow, small, harmless and on the evidence to date, beneficial

There has been a warming trend since the late 19th century of only about + 1.2 – 1.5 °C since pre-industrial times (1850- 1900 baseline), recovering from the Little Ice Age, a cooler period centred on Eurasia. However, over the last 541 million years, Earth's average temperature has often hovered around 19 – 25 °C, far warmer than today's ~ 16 °C, with thriving ecosystems and no human influence. Our current interglacial is relatively cool. A degree or two of variability fits natural cycles

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Example: Heat Wave Index for the USA between 1895 and 2020

- In recent decades USA, heat waves have been less frequent and severe than they were in the 1930s.
- Most of the modest warming that has occurred over the past few decades has largely affected winter temperatures, locations closer to the poles and temperatures recorded at night.

Heat Waves

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

1) Weather related crises have not increased with increases in CO₂

- Assertions are made claiming that weather extremes are increasing in frequency and severity, spurred on by humanity's greenhouse gas emissions. However, many types of extreme weather show no signs of increasing and in some cases are decreasing. Drought has shown no clear increasing trend, nor has flooding. Hurricane intensity and number show no increasing trend. Globally, wildfires have shown no clear trend in increasing number or intensity

Is sea level rise and rate of rise unusual and a major concern?

SEA LEVEL RISE: THE FACTS

IS RISING SEA LEVEL A BIG THREAT?

PRESENT GLOBAL RATE OF SEA LEVEL RISE IS ABOUT **20 cm PER 100 YEARS**, GRADUALLY REDUCING AS REMAINING ICE ON LAND IS MELTED.

JERSEY'S RECORDS OF HIGH TIDAL RANGES INDICATE THAT HIGH TIDES HAVE VARIED LITTLE SINCE 2008, WITH THE EXCEPTION OF **0.5M IN 2011**

ANY ONGOING INCREASES ARE **SMALL AND MANAGEABLE.**

JERSEY: HIGH TIDAL RANGE (2008–2024)

THE DATA SHOWS: NO ACCELERATION, NO CRISIS – JUST NATURAL VARIATION.

THE FACTS SHOW A VERY MANAGEABLE SITUATION

THE EVIDENCE SHOWS SEA LEVEL RISE IS REAL, BUT SLOW, STABLE AND MANAGEABLE.

Is sea level rise and rate of rise unusual and a major concern?

Area comparison of changing sea levels between 1898 and 2017

The Intergovernmental Panel on Climate Change stated, “No significant acceleration in the rate of sea level rise during the 20th century has been detected.” Long-term tide gauge records show a long, steady rise in relative sea levels over the entire length of their records, sometimes longer than a hundred years, with no acceleration. NOAA places this rate of rise at about 1.7-1.9 mm per year. NOAA Tides and Currents: “The absolute global sea level rise is believed to be 1.7 +/- 0.3 millimeters/year during the 20th century.”

This is what catastrophic sea-level rise actually looks like

<https://wattsupwiththat.com/2023/10/06/nothing-to-sea-here-folks/>

<https://www.perplexity.ai/page/dutch-study-challenges-sea-lev-XgQhV3.uTDicIbaCPw3nGA>

Is sea level rise and rate of rise unusual and a major concern?

The rate of rise we've seen over the past centuries is not increasing,

- At the peak of the last ice age, 20,000 years ago, sea levels were 400 feet lower than today.
- As the ice sheets melted, oceans surged upwards, rising at an average of 15 mm per year between 15,000 and 8,000 years ago.
- During 'Meltwater Pulse 1A', seas shot up by 50 feet in just 500 years - a foot per decade as ice sheets collapsed. But by 6,000 years ago, the Great Melt was largely complete.
- Since then, sea levels have been relatively stable. Yet today, we're told to believe that the last few inches are catastrophic and all our fault, not part of the natural cycles that have driven Earth's climate time immemorial.
- That ignores history, data and basic science.
- The rate of rise we've seen over the past centuries is not increasing, according to global tidal gauge data.
- A recent study of 204 tidal gauges worldwide found 95% show no statistical acceleration, and the few that do are explained by local land motion/subsidence - not climate change.

<https://x.com/i/status/2027549315586265239>

Is sea level rise and rate of rise unusual and a major concern?

Polar Sea ice extent at both poles is now tracking close to their 1981–2010 averages

Antarctic ice has rebounded sharply from last year's low, while Arctic coverage is now within normal range,

Back in 2009, the newly appointed director of the NSIDC, Mark Cerise, warned that Arctic sea ice was in a "death spiral". He predicted the Arctic could be ice-free by the summer of 2030, likely even earlier. Nearly two decades later, the data tell a different story.

According to the NSIDC's own records, September sea ice has shown no downward trend since 2007. That's 18 years of stability.

Despite rising CO₂ levels and every claimed feedback mechanism, the ice is not budging.

As climate researcher Javier Vinós put it, "clearly the models on which these predictions are based do not accurately reflect the actual climate." The Arctic death spiral never happened..

Are higher CO₂ levels and warmer temperatures good or bad?

Are higher CO₂ levels and warmer temperatures good or bad?

Between 1982 to 2015 the world has been greening with increases in CO₂

- NASA satellite images show vast regions with increased growth due mainly to higher levels of CO₂, as increased CO₂ levels mean plants require less water to grow. Examples are the greening of the lower Sahara and the retreating deserts in China. More CO₂ has resulted in more and more rapid plant growth with significant greening. Since 1980, the semi-arid areas have greened by 40%
- Global warming increases cold temperatures much more than warm temperatures. Temperate and Arctic regions are affected much more than tropical areas, where temperatures have varied little
- As CO₂ continues to rise, global plant growth will also increase. [Forests have expanded globally.](#)

Are higher CO₂ levels and warmer temperatures good or bad?

Test shows improved tree growth with higher CO₂ levels

- Greenhouse gases keep the world warm; they absorb heat and radiate it back to Earth, warming the surface and atmosphere; humans could not exist on Earth without this warming effect.
- When CO₂ increases, plants thrive, becoming larger and able to absorb more CO₂.
- These trees were grown under the same conditions except with varying CO₂ atmosphere levels.
- A standard procedure for greenhouse growers is to increase the level of CO₂ to 800 to 1,200 ppm.
- Almost all ecosystems have grown greener in the past four decades — by about 15 percent in 33 years. So have marine ecosystems, whether based on phytoplankton, corals, or seaweed: all are growing faster. Plants must open their pores — stomata — to inhale CO₂, and in doing so, they lose water, so any increase in CO₂ levels helps them reduce water loss
- Improving Tree Growth With Increasing CO₂ Levels Optimum plant growth CO₂ levels 1000 – 1400 ppm

Are higher CO₂ levels and warmer temperatures good or bad?

4000 years of temperature driven cultural advances and retreats

- Historically, mankind thrived under warmer temperatures and suffered during cold spells.
- Minoans prospered during the warm Bronze Age, followed by mere survival during the Greek Dark Age.
- Civilization flourished during the Roman Warm Period, followed by colder, devastating Dark Ages.
- The Medieval Warm Period (1.0 to 1.4°C warmer) saw civilization advance with positive living conditions.
- The Little Ice Age brought severe hardships, including crop failures, famine and population decline.
- These warm periods, when mankind thrived, were all higher by 0.5 to 2 °C than today's temperature

Are higher CO₂ levels and warmer temperatures good or bad?

Science & Observations Do Not Support Net Zero Policies?

Dr W.A. Van Wijngaarden

Actual Impact of CO₂

Ocean Acidification

- Without CO₂ oceans would be very basic with pH of 10.5, like bleach, and would not support life in oceans
- Doubling atmospheric CO₂ lowers ocean pH from 8.18 to only 7.93. This is less than pH variations with latitude, longitude and depth in oceans. This is also comparable to diurnal pH change in surface waters, due to photosynthesis during day and respiration at night
- Coral reefs grow best in warm water

Vegetation

- Vegetation grows much faster with higher CO₂ plus absorbs more CO₂ so may mitigate rate of CO₂ increase
- Increasing CO₂ reduces hole pore space in plants, less water loss and easier to grow in arid regions
- Methane Impact
- Warming due to methane is 1/10th that of CO₂ because of the very low amount of methane being added
- Shooting all the cows would reduce temperature effect by only 0.05 C degrees --a completely trivial amount

Conclusions

- Doubling of CO₂ warms the Earth by 1 Degree C with an unknown impact on clouds and any added effect
- Evidence does not support hysteria about polar ice sheet retreat, sea level rise or related items
- There is no observed change in precipitation, frequency of severe storms, tornadoes, hurricanes or forest fires
- Sea life, such as coral reefs, are not endangered by small temperature rises
- Net zero efforts to outlaw fossil fuels, reduce cattle numbers and fertiliser use endanger food supply and make it impossible to preserve our standard of living and are not supported by scientific evidence

[Do Science & Observations Support Net Zero Policies?](#)

Are higher CO₂ levels good or bad?

Increases in CO₂ have very beneficial effects Peter Clarke on CO₂ and the greening planet

Positive Impacts of Added CO₂

- Global crop yields have risen 15 – 20 % since 1960, almost entirely attributed to CO₂ fertilisation (Idso, 2013, IPCC AR6 WG1 Ch5). Famine deaths have also plummeted over time as the world's population doubled. CO₂ deserves much of the credit. Increased CO₂ over the past century has supported this explosion in plant life and available plant food from booming agriculture.
- There has been a more than 18% increase in the global leaf area in 40 years (from CO₂ fertilisation). Warmer, more balmy temperatures are also lengthening the growing seasons. Every 100 ppm increase in CO₂ typically boosts plant growth by 25-50 % in all non-water-limited conditions. My analysis draws on 776 studies from 1993-2019, clearly showing that an increased CO₂ level delivers an increase in global biomass.
- This is an astonishing windfall for life on earth, chiefly from CO₂, a trace gas at 420 ppm (or 0.04%). It also has a secondary benefit for life by contributing to baseline levels of warmth around the planet, along with water vapour and other trace gases with similar properties, like methane (1,920 – 1830 parts per billion). However, this is not enough to be the defining control knob for changing the climate around the world.
- These are the reasons why commercial greenhouses pump CO₂ to 1000-1500 ppm. It ensures that crop yields jump by 20-70% depending on the crop. If 1000 ppm is good for tomatoes, why is 420 ppm an emergency for the planet?

Are higher CO₂ levels good or bad?

Increases in CO₂ have very beneficial effects Peter Clarke on CO₂ and the greening planet

Positive Impacts of Added CO₂

- Water vapour and cloud cover are the mainstays of rainfall and the entire hydrologic cycle, returning water as precipitation to rivers, lakes and maintaining the oceans (where 78% of rain ends up).
- The world population has more than doubled since 1970, going from roughly 3.7 billion to over 8 billion by 2022-2025. The population tripled since 1950. This massive global expansion was supported by increased food production and agricultural advancements, known as the Green Revolution.
- CO₂ is the foundation for life on Earth and the chief source of photosynthesis. It also delivers the calcium carbonate in water to produce exoskeletons for all shellfish. This is the miracle of CO₂, enabling green chlorophyll plants and algae to convert sunlight into food energy and oxygen. In this way, CO₂ supports every food chain on earth.
- Science shows that 500-1000 ppm of CO₂ plus 1-2 ° C extra warming hits the sweet spot for all terrestrial and marine life, including human civilisation. We should be managing adaptation and energy abundance, not waging a war on a trace gas that makes the planet greener. Higher CO₂ gives a net benefit to life on Earth. This means the current carbon-neutral policy of driving down CO₂ levels - the purpose for net-zero - is anti-life.

Are higher CO₂ levels and warmer temperatures good or bad?

60 Facts About CO₂ and Climate

1. CO₂ is not the primary greenhouse gas
2. The warming effect of CO₂ declines as its concentration increases
3. CO₂ is food for plants and is considered the gas of life
4. In the last four ice ages, the CO₂ level was dangerously low
5. The world has been in a 140-million-year trend of dangerously decreasing CO₂
6. The current geologic (Quaternary) period has the lowest CO₂ level in the Earth's history
7. More CO₂ means more plant growth
8. More CO₂ helps to feed more people worldwide
9. More CO₂ means moister soil, a **greener globe and smaller deserts**
10. Global warming stopped 18 years ago despite the rise in CO₂
11. CO₂ rose after the Second World War, but temperatures fell
12. The present warming began long before SUVs or coal-fired power plants
13. Melting glaciers and rising sea levels confirm that warming predates CO₂ increases
14. Temperatures have changed over 800,000 years and well before mankind
15. Interglacials usually last 10,000 to 15,000 years. Our present one is 11,000 years

Gregory Wrightstone Inconvenient Facts pages 125 - 128

Are higher CO₂ levels and warmer temperatures good or bad?

60 Facts About CO₂ and Climate

16. Each of the four previous interglacial periods was significantly warmer than the one we are currently experiencing
17. The last interglacial, about 120,000 years ago, was 8 degrees warmer than today and the polar bears survived, plus the Greenland ice didn't melt
18. Temperatures have changed over the past 10,000 and weren't due to mankind.
19. Today's total warming and rate of warming are similar to earlier periods
20. For 6,100 years out of the last 10,000 years, it was warmer than today
21. The current warming trend is neither unusual nor unprecedented
22. Earth's orbit and the tilt of the Earth's axis drive ice ages and interglacial periods
23. We are now living in one of the coldest periods in all of Earth's history
24. Earth has not had a geologic period this cold in 250 million years
25. The only thing constant about temperatures over 600 million years is that they have been constantly changing
26. For most of Earth's history, it was 10 degrees C warmer than today
27. IPCC's models overstate future warming up to three times too much
28. For human advancement, warmer is better than colder
29. Returning to pre-industrial Revolution temperatures will lead to famine and death

Are higher CO₂ levels and warmer temperatures good or bad?

60 Facts About CO₂ and Climate

- 30. Only 0.3% of the publications stated in their papers that the recent warming was mostly man-made
- 31. Science is not consensus, and consensus is not science
- 32. More CO₂ yields fewer droughts
- 33. Higher temperatures also show fewer droughts
- 34. Forest fires in the Northern Hemisphere are decreasing
- 35. More CO₂ provides more CO₂ fertilization and more soil moisture, faster tree growth and fewer forest fires
- 36. More CO₂ in the atmosphere means more food for everyone
- 37. The Earth is becoming greener and not turning into deserts, which are shrinking
- 38. Growing seasons are lengthening
- 39. More CO₂ and warmer weather mean more world food production
- 40. EPA: Heat waves are not becoming more frequent
- 41. Extreme heat events are declining
- 42. Cold kills far more people every year than heat
- 43. Warmer weather means many fewer temperature-related deaths
- 44. Warmer weather prevents millions of premature deaths every year

Are higher CO₂ levels and warmer temperatures good or bad?

60 Facts About CO₂ and Climate

45. More CO₂ and warmth mean shorter and less intense heat waves
46. The number of tornadoes is decreasing
47. The number of tornadoes in 2016 was the lowest on record till zero in 2025
48. Death from tornadoes is falling
49. There has been no increase in the frequency of hurricanes in recent data
50. We have seen 250 years of declining hurricane frequency
51. No significant increase in hurricane intensity due to global warming
52. The polar bear population is growing
53. There are more polar bears today than there have been for 50 years
54. Polar bears thrive even where the sea ice is diminishing
55. There is no historical connection between CO₂ and the ocean's PH
56. The oceans did not become acidic, even at 15 times modern CO₂ levels
57. Sea level increases began more than 15,000 years ago
58. The recent sea level rise began 150 years before the increases in CO₂
59. Melting the northern polar ice cap in the Arctic Ocean will not raise the sea level
60. Most of Antarctica is cooling down and gaining ice mass

Are higher CO₂ levels and warmer temperatures good or bad?

Expert opinion by Gregory Wrightstone, CO₂ Coalition

Gregory Wrightstone: "It's quite obvious that there are huge benefits that are due to climate change:

- i) Longer growing seasons**
- ii) Crop productivity is outpacing population growth,**
- iii) Extreme weather-related deaths have dropped more than 90 percent since 1900,**
- iv) Deserts are shrinking, and**
- v) Forests are expanding."**

Reference book: A Very Convenient Warming. How modest warming and more CO₂ are benefiting humanity, Gregory Wrightstone

What could have caused changes in CO₂ levels over geologic time?

Comments CO₂ and Climate Change

- The emergence of plant life 450 MY ago resulted in plants absorbing CO₂ and adding O₂
- Plate tectonics and volcanics added CO₂. Colliding and spreading plates and warm oceans, which release CO₂ to the atmosphere, presently add about 280 to 360 million tonnes (0.28 to 0.36 Gt) per year of CO₂.
- About 85% of the planet's volcanoes are submarine and account for 75% of the heat transfer to the surface from molten rock, which releases monstrous amounts of CO₂.
- Large disturbances, including immense releases in magma, occurred at least five times in the past 500 million years, dramatically increasing the overall level of CO₂.
- Plants and cold oceans are major reservoirs for absorbing CO₂.
- Over geologic time, global temperatures changed independently from changing CO₂ levels, which have been generally decreasing over the last 150 million years.
- Through burning fossil fuels, human carbon emissions added to atmospheric CO₂ levels
- Modern agricultural practices of preparing a field by spraying with weed killer and then light furrow planting open the topsoil and allow oxidation of the soil carbon, releasing about 18 tons (23% of total) of carbon dioxide into the atmosphere.

Is present Global Warming a man-made or a natural phenomenon?

365 years of temperature data from central England, the world's longest-running climate record, show no trend

Despite a six-fold rise in population and a surge in CO₂, January temperatures have barely shifted since 1600. Likewise for July, the hottest month of the year, temperatures are virtually unchanged.

Even during the coal-fired Industrial Revolution there was no sudden spike. The warmest winters on record occurred in the 1700s, the 1800s, and the early 1900s, long before modern emissions.

Any warming appears slow and natural, with the slight modern uptick likely linked to two factors:

- 1) the urban heat island effect, and
- 2) 2) Earth's gradual recovery from the Little Ice Age.

If carbon dioxide truly controlled the climate, the CET record would shoot upward on the right. It does not.

<https://x.com/i/status/2035370856583409820>

Is present Global Warming a man-made or a natural phenomenon?

Human crises were much higher during the period of a deteriorating, colder climate

1815 Volcanic Eruption Results in a Cold, Devastating Period

- On April 5, 1815, Mount Tambora volcano in Indonesia, erupted, releasing 100 cubic kilometres of molten rock—and ash clouds that covered an area the size of Australia—into the sky.,cooling the Earth's temperature, resulting in starvation and misery
- It took a full year after the eruption for the shockwaves to reach Canada. On April 12, 1816, it began snowing in Quebec City—and it didn't stop. A news report from April 18 wrote, "The country has all the appearance of the middle of winter, the depth of snow being still between three and four feet. We understand that in many parishes the cattle are already suffering from a scarcity of forage.". By June, the noontime temperature in central Ontario was just one below zero. In the Quebec countryside, newly shorn sheep began dying from the cold. The *Montreal Herald*, meanwhile, urged readers to plant as many potatoes as possible in case the summer's wheat crops failed completely.
- Manitoba [witnessed](#) a cold spell that began on June 5. "A very sharp frost at night... killed all the barley, wheat, oats and garden stuff above the ground except lettuce and onions"
- Cold fronts continued to sweep through Lower Canada in July. By September, Lower Canada was destitute. Up to four-fifths of the region's hay crops were ruined, while the frost left the province with a small wheat harvest and an even smaller supply of oats. Farmers were forced to sell their dairy cows to buy bread, while others survived on a diet of wild herbs.

Is present Global Warming a man-made or a natural phenomenon?

Human crises were much higher during the period of a deteriorating, colder climate

1815 Volcanic Eruption Results in a Cold, Devastating Period

- These cold-related disasters also occurred in the rest of the world
- Summer frosts also devastated much of the eastern United States, from New England to Virginia. Failing crops and rising bread prices led many hungry settlers to leave for areas in the Midwest, particularly modern-day Indiana and Illinois.
- Across the Atlantic, the citizens of Germany and France struggled with surging food prices. In the Netherlands, rainstorms destroyed so much hay and grain crops that farmers, fearing their livestock would die of starvation, began slaughtering them. Ireland, meanwhile, faced famine as the region's wheat, oat and potato harvests failed.
- India was ravaged by several late-season downpours. As harvests failed, a combination of famine, mass migration and crowded communities led to the world's first cholera pandemic. By the winter of 1816, the disease broke out in northeastern Bengal—where it killed 10,000 people in two weeks—and spread across Nepal, Thailand, the Philippines, China and Japan.

Reference [witnessed](#) 1816, the year without a summer

Is present Global Warming a man-made or a natural phenomenon?

1) Volcanic eruption, a natural event, warms the Earth's surface

Hunga Tunga Ha'apai Volcano Impacts Global Atmosphere

The eruption of the Hunga Tonga-Hunga Ha'apai volcano 490 feet under the waves on January 15, 2022, blasted an enormous amount of water and volcanic gases into the sky higher than any other eruption in the satellite era. This underwater explosion sent 146 million tons of water from the South Pacific Ocean into the stratosphere.^[60] changing the water composition of Earth's atmosphere and potentially heating it up *for years*. In just a few days, the superheated water from the Hunga Tonga eruption blanketed the entire globe, pole to pole, East to West. It caused the most intense atmospheric explosion ever recorded by modern instruments.

The amount of water vapor ejected was 10 percent of the stratosphere's typical stock.^[61] It was enough to temporarily warm the surface of Earth. It is estimated that an excess of water vapour should remain for 5–10 years.^[59] Hunga's eruption broke all records for injection of *water vapor*—the most powerful greenhouse gas—into the atmosphere. [NASA](#)

Is Climate change mainly caused by mankind's emissions of CO₂?

Is present Global Warming a man-made or natural phenomenon?

Factors that impact Climate Change

The biggest factor influencing weather and climate patterns on Earth is the Sun. The sunlight brings heat to the earth and infrared radiation (IR) going to space cools the planet. Some IR is trapped by the atmospheric greenhouse gases. Changes in greenhouse gas concentrations cause changes in outgoing IR.

Is present Global Warming a man-made or a natural phenomenon?

Factors that impact Climate Change

- **The biggest factor influencing weather and climate patterns on Earth is the Sun.** Depending on the Earth's position to the sun at any given time, climate conditions are going to vary dramatically (day/night, seasons, etc)
- NASA states that the Earth's orbit and the resulting changing angle of the Sun's rays (Milankovitch cycles) are the likely cause of long-term changes to Earth's climate. These cycles operate over timescales of tens of thousands or hundreds of thousands of years. The Earth is presently warming from the last ice age.
- The climate system is very complex. Compared to the effects of the Sun and other natural phenomena, mankind's contribution of CO₂ makes a minor impact on the Earth's energy balance and overall climate:

i) Sun's energy and Sunspot energy emissions. There is a close correlation of temperature with solar activity plus longer-term changes (Milankovitch cycles); ii) clouds have 25 times more impact than mankind's CO₂ impact; iii) tectonics and moving plates and associated volcanos; iv) orbital parameters impact on climate orbit, tilt, wobble effect; v) atmospheric and ocean circulations; v) ocean oscillations; vii) wind circulations; viii) total greenhouse gases. The influence of added CO₂ on the climate has only a minor influence on a massive system.

Is present Global Warming a man-made or a natural phenomenon?

Ocean currents, clouds and the urban heat island effects also impact Climate Change

- Cycles of changes in the Earth's ellipsoid orbit cause ice ages every 100,000 years and the changing tilt of the Earth on a 40,000-year cycle causes an increase or decrease in the intensity of an Ice Age
- Prolonged periods of reduced solar activity, termed a Grand Solar Minimum, contributed to the Little Ice Age. Long periods of increased solar activity, termed a Grand Solar Maximum, helped pull the Earth out of the Little Ice Age and contributed to the 20th century global warming.
- The El-Niño Southern Oscillation is so big it drives more than weather; it impacts a longer-term climate change cycle of building up heat on the surface of the Pacific Ocean that warms the atmosphere (El Niño) and then a cooling of the ocean surface, which cools the atmosphere (El Niña). The El Niño effect could explain all the global warming since 1859.
- Other factors impacting the climate include ocean currents, clouds and the urban heat island effect.
- Ocean currents have a major impact on temperatures. However, CO₂ is not a factor in heating or cooling the ocean, as CO₂ gives off longwave infrared radiation, which can only penetrate the ocean's surface by less than a millimetre. This longwave radiation is then immediately released back into the atmosphere. Only the Sun's ultraviolet, visible, and short-wavelength infrared can penetrate many metres into the ocean's surface and heat the water.
- Clouds also impact temperature. Water-rich clouds over the tropical oceans have the greatest cooling effect and low-water ice clouds at high altitudes have the strongest warming effect.
- Higher global surface temperatures result in more surface water being evaporated into water vapour, which enables more water-rich cloud formations when the water vapour condenses. This results in a cooling effect. Nature is dominated by negative feedbacks like this, which mitigate climate change.
- A 1 % change in cloud cover can have the same effect as doubling CO₂ levels.
- Reaching so-called "tipping points" is rare, as complex natural balances of multiple variables have mitigated changes and have done so throughout geologic time.
- All human permanent settlements also contribute to climate change. The average minimum daily temperatures have been warmer because of the urban heat island effect. Reference book *Sunset on Net Zero* by Ron Barnby

Are CO₂ atmosphere levels dangerously high or historically low?

PAST HIGH CO₂ LEVELS DID NOT CAUSE RUNAWAY TEMPERATURES

HAS EARTH BEEN THIS WAY BEFORE?

YES! EARTH HAD OVER 10 TIMES TODAY'S CO₂ WITHOUT RUNAWAY TEMPERATURES.

CO₂ MUCH HIGHER THAN TODAY

THE PAST SHOWS US: MORE CO₂ DOES NOT MEAN RUNAWAY WARMING.

Is present Global Warming a man-made or a natural phenomenon?

Graphs showing both temperature and CO₂ levels changed over last 600 million years

There is no correlation between CO₂ changes and temperature changes over geologic time

- From about 550 to 350 million years ago (the Paleozoic Era), while life was restricted to the oceans, CO₂ fluctuated from 10 to 25 times higher than today's levels. CO₂ dropped sharply in response to the appearance and spread of land plants about 350 million years ago, then shot up again during the Mesozoic Era..
- From peak CO₂ values of more than ten times the current levels 150 million years ago, CO₂ began a long, gradual decline to today's low levels, as seen in the ice core samples.
- **485 Million Years of Non-Correlation!**

SEPP website articles that refute CO₂ as cause of climate crisis. <http://www.sepp.org/the-week-that-was.cfm...>

Is Climate change mainly caused by mankind's emissions of CO₂?

CO₂ takes up a very small 0.04% proportion of the Earth's total atmospheric gas

- Greenhouse gas takes up 0.8% of total atmospheric gases; CO₂ represents 5% of greenhouse gas
- CO₂ represents only 0.04% of the total atmospheric gases The human contribution to the 0.04% total is 0.0011%.
- During the world's history, CO₂ levels varied between 0.02% and 0.4%, with some very high excursions
- 0.04% equates to 4 bathtubs volume compared to an Olympic pool's 10,000 bathtubs of water
- All greenhouse gases (5% CO₂) keep the world warm, absorbing heat and radiating it back to Earth, warming the surface and atmosphere. Humans could not exist on Earth without this warming effect

Atmospheric Composition

% ppmv		
N ₂ + O ₂	99%	78% N ₂ 21% O ₂ . Largely invisible to infrared rays
H ₂ O	0.4%	Varies greatly with location and weather, 0% in cold regions, 5% in the warm tropics (50,000 ppm)
CO ₂ total	0.0397%	Increased by 22% 1990-2025 ³²⁰ to reach 427ppm
CO ₂ anthro	0.0011%	The anthropogenic contribution is 5.3% of the total, 50% of which is absorbed by natural ecosystems = 0.04x 0.053x0.5 ³²¹
CH ₄	0.000179%	Increased by 14% 1990-2025, to reach 1.94ppm
Other gases	0.94%	Mostly Argon, which along with other trace gases are inert and don't do much in the atmosphere

Is Climate change mainly caused by mankind's emissions of CO₂?

The Sun's radiation energy, the Greenhouse Gas effect and the warming from CO₂*

- 30% of the Sun's radiation is reflected by clouds and 70% passes through the Earth's atmosphere and strikes the surface.
- **Greenhouse gas** molecules, including CO₂, absorb some of this re-emitted energy and **emit** energy in the form of **heat**.
- **With added CO₂**, the absorption sensitivity of CO₂ **reduces logarithmic** (twice as much CO₂ is needed for same impact)
- This effect is similar to a sponge that initially absorbs a lot of water; this reduces as the sponge becomes saturated*

The Greenhouse Effect

The Sun's Energy Radiation Path

Reference Books:

Is Climate change mainly caused by mankind's emissions of CO₂?

The heating capacity of CO₂ reduces logarithmically. Clouds are more important.

- Max Planck delineated the spectrum of radiation from warm bodies, showing that **the impact of doubling CO₂ from 400ppm to 800ppm is only 0.71C of warming**. Doubling again to 1600ppm adds 0.35C
- Dr. W. A. van Wijngaarden and William Happer demonstrate the **dominant role of clouds on Earth's climate**. Clouds have a large effect on radiative heat transfer from Earth's surface to space. **Greenhouse gases also affect heat transfer, but much less than clouds.**
- Doubling CO₂ concentrations only decreases radiation to space by about 1%. However, clouds cover more than half the planet and an increase in **low cloud cover of only 1% could largely compensate for the same doubling of CO₂**.

Planck Curve - Effect of CO₂ on the Earth's Heat Spectrum

Temperature Impact Decreases with Increased CO₂

Is Climate change mainly caused by mankind's emissions of CO₂?

Graphs showing both temperature and CO₂ levels changed over last 400,000 years

- Changing glaciation periods are tied to changes in Earth's orbit and have occurred over the last 800,000 years
- As seen in historic ice records, **CO₂ increases occur in response to temperature increases** (650 to 6000 years later) and therefore cannot cause these preceding temperature increases (Malkovich cycles based on Earth's orbit changes)
- As temperature increases, oceans release CO₂ into the atmosphere.* **Henry's Law: warming water holds less gas**

CO₂ vs Temperature Over the Past 400,000 Years

Reference book:: The Inconvenient Real Truth page 80, 81

Source Adapted from U.S.Dept. of Energy

Is Climate change mainly caused by mankind's emissions of CO₂?

Physical chemistry (Henry's Law) shows that warming oceans cause increased atmospheric CO₂

Henry's Law explains why warmer temperatures cause higher CO₂ levels and not the other way around, as is claimed by those supporting a CO₂ driven climate crisis.

Henry's Law states that, at a constant pressure, the amount of gas that dissolves in a liquid is proportional to the partial pressure of that gas above the liquid. Henry's Law itself is about pressure, but **the Henry's Law constant is temperature-dependent**.

In practice, **warming fluids hold less gas. This is well-established physical chemistry.**

This principle is **uncontroversial** and accepted by physical chemists, oceanographers and climate scientists.

Temperature effect is important in understanding the warming ocean's release of CO₂

- As temperature increases, the solubility of most gases in liquids decreases.
- Warm water holds less dissolved gas than cold water. Cold oceans can hold more CO₂
- Warm oceans release CO₂ more easily

Why this happens: Gas molecules are only weakly bound in a liquid. When the liquid warms up, molecules move faster and it's easier for dissolved gas molecules to escape back into the atmosphere

Is climate change mainly caused by mankind's emissions of CO₂?

CO₂-driven climate models overestimate the actual trend of climate change

CLIMATE MODELS OVERSTATE WARMING – OBSERVATIONS DON'T

DO MODELS MATCH WHAT WE ACTUALLY SEE?

GLOBAL TEMPERATURE CHANGE SINCE 1979

MODELS PREDICT ABOUT **2-3 TIMES** MORE WARMING THAN WE OBSERVE.

OBSERVATIONS SHOW MUCH LESS WARMING THAN MODELS PREDICT.

SATELLITE RECORDS ARE VERY RELIABLE – THEY SHOW REAL-WORLD TEMPERATURES.

REAL-WORLD DATA MATTERS MORE THAN MODEL FORECASTS .
OBSERVATIONS NOT MODELS.

Is Climate change caused by mankind's emissions of CO₂?

Factors that impact Climate Change – Javier Vinos

- The IPCC has contributed to the “emergency discourse” through the development of a series of gloomy future (yet to be seen) scenarios. Javier Vinos provides an alternative set of projections after taking into account fossil fuel supply side constraints and human population dynamics.

Fig. 13.10 Conservative temperature, CO₂ level, and emissions forecast to AD 2200
CO₂ emissions from fossil fuels forecast (brown continuous line, right outer scale) based on a peak in oil consumption by 2018–35 (dashed brown line), a second peak in coal consumption before 2050 (dotted brown line) and increasing gas consumption to 2100 (dash-dotted brown line), producing a peak in CO₂ emissions from fossil fuels at c. 35 Gtons by 2050. Historical CO₂ emissions from fossil fuels are from Gilfilland et al. (2019), archived at CDIAC (AppState) and updated with data from BP Statistical Energy Review (2022). Atmospheric CO₂ levels (blue line, right inner scale) should therefore stabilize at c. 500 ppm by 2080 before starting to decrease slowly as sinks remove more than is added. Historical atmospheric CO₂ levels are from Law Dome (after Etheridge et al. 1996) to 1958 and from NOAA afterwards. An idealized millennial cycle in solar activity is represented by the orange line, peaking at 2050–2080, temporarily reduced by centennial and bicentennial lows indicated with their names. CMIP5 model-mean temperature anomaly (red line) projects reaching +1.5 °C above pre-industrial by the 2030s, and +2.0 °C by the 2050s. Temperature anomaly should stabilize until the 2030s, increasing afterwards and peaking c. the 2070s at c. +1.5 °C above pre-industrial, due to CO₂, solar activity forecasts, and oceanic oscillations. Afterwards temperature anomaly could enter a slightly declining undulating plateau as both CO₂ and solar activity slowly decline. Historic temperature anomaly is from UK MetOffice HadCRUT 4.6 global surface monthly dataset (13-month averaged).

- Evidence shows that glacial inceptions have taken place for the past two million years every time obliquity has gone below 23 degrees during an interglacial period. Interglacial periods are unsustainable under low obliquity conditions, and there is no evidence that this time will be any different. **Evidence suggests that in 1500 to 4500 years, the next glacial inception will take place.**

Is Climate change caused by mankind's emissions of CO₂?

CO₂-driven climate models over estimate actual trend of climate change

Computer climate models vs actual results

Is Climate change caused by mankind's emissions of CO₂?

Finally, a successful climate change model that matches historic results

Paul Burgess's Oceanic – Solar – CO₂ index-based temperature modelling results versus satellite temperatures show an excellent match between 1983 and 2025. Having the model explain the temperatures so exactly shows that, since 1983, 75% of the modest global warming experienced occurred due to natural events, strongly impacted by ocean current changes, with only a minor CO₂ impact. Only 25% was due to mankind's added CO₂. Using these excellent modelled results, the CO₂ contribution from 1850 to 1980 was 0.3°C and from 1980 to 2025 another 0.3°C. Based on this model, another 1°C, beneficial to mankind, will occur in the next 175 years.

Yearly Temperature Modelling Results 1983 -2025

Paul Burgess paper The Oceanic-Solar Index and Sea Surface Temperature A Plain-English Physical Explanation

[The Sun, The Clouds, The Oceans In My Most Important Video Ever](#) Paul Burgess's successful modelling shows that since 1983, temperature can be replicated simply by looking at the new Oceanic Index and the amount of solar radiation, not the CO₂ and a small element of CO₂.

[At last the answer: how much warming is natural and how much warming is from mankind?](#) Paul Burgess

[Final Main Paper](#) Paul Burgess) [Final Main Paper](#) Paul Burgess **The Burgess Oceanic-Solar-CO₂ Index and the Climate Record since 1900 An Evidence-Based Assessment**

Is Climate change caused by mankind's emissions of CO₂?

Paul Burgess's climate change model demonstrates the oceans' strong impact

Changes in Sea-Surface Temperature (SST) are linked to the Oceanic-Solar Index, which provides a direct, physical explanation of why CO₂ downward reflected energy cannot make a strong impact on ocean temperatures.

1. How Energy Enters the Ocean

The ocean is warmed mainly by shortwave radiation from the Sun. This energy moves downward into the ocean and is absorbed up to the upper 100 m water column. In contrast, **CO₂-related infrared radiation is absorbed only at the very surface (due to its radiation frequency), but does not penetrate into the ocean beyond the ocean skin surface.** Sunlight heating penetrates further downward and warms a large volume of ocean water.

2. The Hairdryer and Bath Analogy

Trying to warm the ocean using CO₂ is like trying to heat a bath with a hairdryer. The air just above the water warms briefly, but the bath itself hardly changes temperature. To heat the bath, energy must be delivered deeper into the water, not just across its surface.

3. The Oceanic-Solar Index Connection

Natural ocean cycles change winds and cloud cover. With cloud coverage, less sunlight moves downward into the ocean, reducing absorbed energy and lowering the SST.

The Oceanic-Solar Index captures this sequence and the successful modelling explains (matches) the timing of observed warming associated with the oceans and not changes in CO₂.

[The Sun, The Clouds, The Oceans In My Most Important Video Ever](#) Paul Burgess's successful modelling shows that since 1983, temperature can be replicated simply by looking at the new Oceanic Index and the amount of solar radiation, not the CO₂ and a small element of CO₂.

Is Climate change caused by mankind's emissions of CO₂?

Paul Burgess's climate change model demonstrates the oceans' strong impact

4 Satellite Measurements Show Limited Impact from CO₂-Reflected Heat

Using satellite measurements, the Oceanic-Solar explanation of Earth's energy balance, rather than surface ocean temperatures, demonstrates why the CO₂ downward reflected wavelength energy has minimal impact. These satellites measure how much sunlight enters the climate system, how much is reflected back by clouds, and how much energy leaves Earth again. The energy budget can be separated into two parts: all-sky covered conditions (including clouds) and clear-sky conditions (clouds mathematically removed). The key finding is that recent warming appears strongest in the all-sky covered data but is much weaker in the clear-sky data. This shows that the dominant energy change is linked to clouds and sunlight, not to greenhouse trapping in clear air. When cloud effects are removed, the apparent excess heating largely disappears, supporting the cloud-impacted solar ocean heating mechanism.

The pattern of ocean heat uptake matches what is expected from sunlight entering from above and being reflected downward, rather than from infrared heating confined to the surface.

Conclusion

Sea-surface temperature changes are controlled mainly by how much sunlight enters the ocean. Because sunlight penetrates deeply and CO₂ does not, the Oceanic-Solar Index provides a physically consistent explanation for observed ocean warming confirmed by independent satellite energy measurements.

Paul Burgess paper The Oceanic-Solar Index and Sea Surface Temperature A Plain-English Physical Explanation

[The Sun, The Clouds, The Oceans In My Most Important Video Ever](#) Paul Burgess's successful modelling shows that since 1983, temperature can be replicated simply by looking at the new Oceanic Index and the amount of solar radiation, not the CO₂ and a small element of CO₂.

What about the scientists' man-made Global Warming crisis consensus?
There is no consensus regarding mankind's CO₂ emission causing a climate crisis

CONSENSUS... THEREFORE NO DEBATE?

SCIENCE IS NOT DETERMINED BY CONSENSUS, ASK COLUMBUS:

What about scientists' consensus regarding man-made Global Warming crisis?

The stated scientific crisis consensus is misleading; many reputable scientists disagree

There is consensus that temperatures have been and are increasing and that mankind has increased CO₂ levels. However, there is no consensus regarding the degree to which mankind's CO₂ emissions are impacting temperatures or that this is causing a climate crisis.

A large and increasing number of world-renowned scientists speak out against this, including:

Dr. John Christy, Professor of Atmospheric Science, Director of Earth System Science Center, U. of Alabama

Dr. John F. Clauser has degrees from Caltech and Columbia University, a Nobel Prize winner in science

Dr. Judith Curry, climatologist, former chair of Earth and Atmospheric Sciences, Georgia Institute of Technology

Dr. Ivar Giaever, professor emeritus at the Rensselaer Polytechnic Institute, Nobel Prize in Physics

Dr. William Happer, Physics professor Emeritus, Princeton Univ., atomic physics, optics, spectroscopy

Dr. Steven Koonin, theoretical physicist and former director Center for Urban Science at New York Univ.

Dr. Richard Lindzen, MIT atmospheric physicist, on the dynamics of the atmosphere and ozone photochemistry

Dr. Patrick Moore, ecologist, UBC, co-founder of Greenpeace

Dr S. Fred Singer, Atmospheric physicist, professor emeritus of environmental science, U. of Virginia

2000+ Scientists sign **World Climate Declaration: THERE IS NO CLIMATE EMERGENCY** stating: i) natural as well as anthropogenic factors cause warming; ii) warming is far slower than predicted; iii) climate policy relies on inadequate models; iv) CO₂ is plant food, the basis of all life on Earth; v) Global warming has not increased natural disasters; vi)

Climate policy must respect scientific and economic realities <https://clintel.org/wp-content/uploads/2023/11/WCD-version-111523.pdf>

Many governments are also moving away from or delaying the implementation

What about scientists' consensus regarding man-made Global Warming crisis?

The stated scientific crisis consensus is misleading; the CO2 Coalition of scientists disagrees

A key player here is the [CO2 Coalition](#), which includes scientists and researchers from across the globe devoted to educating the public and policymakers about the *benefits* of CO2. Not only is the naturally occurring substance not a pollutant, but it's in fact the great elixir of life on Earth.

The coalition has a long and copious list of ["facts and data"](#) highlighting the benefits of CO2 that do not fit in with the narrative of centralized planners in Washington.

The regulatory attack on CO2 is essentially an attack on humanity itself. Dr. William Happer, a retired Princeton University physicist and founder of the CO2 Coalition, explains why.

"Carbon dioxide is at the basis of life on Earth," Happer said in an [interview](#) with Freedom Research. "We live because plants are able to chemically transform carbon dioxide and water into sugar and a byproduct is the oxygen that we breathe, and so we should all be very grateful that we have carbon dioxide."

"Life would die without carbon dioxide," he explained.

Happer and other members of the CO2 Coalition view the recent warming trend as a [natural response](#) to the planet's emergence from the Little Ice Age beginning in the 1800s. Overturning the Endangerment Finding is a matter of sound science.

- <https://dailycaller.com/2025/04/27/opinion-trump-makes-america-independent-from-the-climate-grift-kevin-mooney/>
- <https://principia-scientific.com/46-climate-change-denying-statements-made-by-former-ipcc-scientists/>

What about scientists' consensus regarding man-made Global Warming crisis?

9) The Great Climate Change Debate Professor David Karoly versus Professor William Happer

“The whole point of science is to question accepted dogma” Freeman Dyson Nov. 5, 2013

- Karoly, Tamslyn and Happer agree that the contribution of human emissions to modern warming cannot be measured and must be compared with climate models. Karoly and Tamslyn think the IPCC models are accurate and use them to predict dangers to mankind and the planet. Happer disagrees and provides evidence that the models are not accurate and compute too much warming. He also provides a calculation of the direct impact of CO₂ on temperature of about one degree Celsius per doubling of CO₂, which will take 320 years for temperature to rise two degrees over pre-industrial (Little Ice Age) levels.
- Is warming of two degrees a hazard or will we be fine up to higher temperatures? Even the assertion that two degrees above the Little Ice Age is a dangerous rise is speculative and controversial. The current global average temperature is about 15 C, but over the last 500 million years the overall average surface temperature has been estimated to be 17 to 20 C, two to five times higher than today.
- The alleged dangers due to man-made climate change hinge on Climate Sensitivity (CS). All the projected future hazards to mankind and the planet hinge on the value of CS and the global average temperature considered to be dangerous. Cloud cover feedback is, by far, the largest component of CS uncertainty. Yet, cloud feedback is unknown. The best answer to what the impact of CO₂ and clouds is on climate is “We don’t know”.
- Happer points out that global warming and the addition of CO₂ are beneficial and will be for many more years. The “dangers” rely on an assumed and unsubstantiated “tipping point” of an additional two degrees C. These statements are unproven. “There is no scientific basis for the claim that increases in atmospheric CO₂ due to burning of fossil fuels will cause climate change that will have substantial adverse impacts on humanity or natural systems”.
- Plus, “Any resulting climate change will be moderate and there will be very major benefits to agriculture and other plant life.”
- The author concludes Happer won the debate.

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

The impact of media bias in reporting can be very misleading

- These graphs have similar data from different years gathered from the Government weather stations
- These German temperatures are similar, but the media message signaling is slanted and different.
- The time magazine pictures also show similar biased, sensationalized reporting, overdramatizing reality.

Reference graph from Germany Met.

Global Cooling

Global Warming

[Bjorn Lomborg on X: "UN routinely warns us that we have just a few years left until catastrophe: In 1982, Tolba, head of UN Environment Programme told the world that it had just 18 years before an environmental catastrophe as irreversible as any nuclear holocaust <https://t.co/8wyP10fJOn> <https://t.co/zDYD8ldJo5> / X \(twitter.com\)](#)

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Media and political reporting can be misleading

Media Lying About Climate And Hurricanes

Media Lying About Climate And Hurricanes

It's time to state the obvious.

Michael Shellenberger
October 5, 2022

Over the last several weeks, many mainstream news media outlets have claimed that hurricanes are becoming more expensive, more frequent, and more intense because of climate change.

- *The Financial Times* [reported](#) that “hurricane frequency is on the rise.”
- *The New York Times* [claimed](#), “strong storms are becoming more common in the Atlantic Ocean.”
- *The Washington Post* [said](#), “climate change is rapidly fueling super hurricanes.”
- *ABC News* [declared](#), “Here’s how climate change intensifies hurricanes.”
- Both the *FT* and *N.Y. Times* showed graphs purporting to show rising hurricane frequency using [data from the U.S. government’s National Oceanic and Atmospheric Administration \(NOAA\)](#).

All of those claims are false.

The increasing cost of hurricane damage can be explained entirely by more people and more property in harm’s way. Consider how much more developed Miami Beach is today compared to a century ago. Once you adjust for rising wealth, there is no trend of increasing damage.

Article on media bias <https://www.dailymail.com/news/Ofcom-accused-Orwellian-assault-free...>

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Media reporting can be misleading – We are not experiencing a record temperature rate rise

Recent “record warming rates” are not the highest rate records after all.

The Central England Temperature record is the longest thermometer record available.

- The 40-year period from 1695 to 1735 had an increase in temperature of 2.0 degrees C or 0.04 degrees per year. From 1978 to 2018 it rose 1.2 degrees C or 0.03 degrees per year.
- The Central England Temperature record is consistent with the proxy ice core records, for previous warmings, the medieval warming, Roman warming, the Minoan warming, etc.
- The Greenland Ice Sheet record shows that the run-up to the Minoan, Roman and Medieval Warm Periods occurred with faster warming. The modern temperature spike is not climate; it is statistical. <https://x.com/i/status/2022838278399922632>

<https://climatechangedispatch.com/ice-core-data-modern-warming-statistically-unremarkable/>

[Separating Weather from Hysteria: The 'Double Heat Dome' Story](#)

[It Was Hot In 1911 As Well, Mr Miliband!](#)

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Political reporting can be misleading

Falsified temperature records by the Netherlands Meteorological Institute

- In 2016, the Netherlands Meteorological Institute adjusted temperatures at De Bilt - the country's main climate station. Daily maximums from 1901 to 1950 were lowered by up to 1.9C, which removed 16 of 23 heatwaves from the record. The altered data were then used to claim modern heatwaves were unprecedented.
- Four researchers challenged the changes. But the institute dismissed the criticism. So the **analysis went to peer review**. In 2021, **it was published**, conclusively demonstrating the method systematically erased historical heat extremes. Today, the Meteorological Institute has quietly changed its approach and **seven erased heatwaves have been restored**.
- A government agency was caught rewriting climate history. The Netherlands Meteorological Institute erased heatwaves of the past, ignored critics, and reinstated the truth only when the evidence became impossible to ignore.
- Policies were built on that manipulated record. Dutch farmers lost livelihoods. Industry and the wider economy paid the price.

<https://x.com/i/status/2021252821425979841>

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Fearmongering shouldn't drive climate policy.

Fearmongering shouldn't drive climate policy.

Over the past half-century, environmentalists predicted countless calamities that didn't happen and pitched draconian countermeasures that turned out to be mostly misguided.

[Forests have expanded globally](#), most obviously in rich countries but also increasingly across the world.

A recent [peer-reviewed study](#) counts almost 100 doomsday predictions made by environmentalists over the past 50 years. Two-thirds predicted doom before today. **All turned out to be wrong.**

The simplistic, alarmist predictions of the 1970s set the tone for decades, however, and still echo in the climate alarmism that argues for expensive, inefficient policies by recycling many of the old scare stories of not enough food and more and more weather catastrophes. Climate change is a real challenge, but, as before, its scariness is greatly exaggerated.

[Bjorn Lomborg: Fearmongering shouldn't drive climate policy](#)

[Apocalypse now? Communicating extreme forecasts](#) by David C. Rode; Paul S. Fischbeck
[International Journal of Global Warming \(IJGW\), Vol. 23, No. 2, 2021](#)

What about the scientists' man-made Global Warming crisis consensus?

2.000+ scientists' World Climate Declaration: THERE IS NO CLIMATE EMERGENCY

There is no climate emergency

- A global network of over 2000 scientists and professionals has prepared this urgent message. Climate science should be less political, while climate policies should be more scientific. Scientists should openly address uncertainties and exaggerations in their predictions of global warming, while politicians should dispassionately count the real costs as well as the imagined benefits of their policy measures.

Natural as well as anthropogenic factors cause warming

- The geological archive reveals that Earth's climate has varied as long as the planet has existed, with natural cold and warm phases. The Little Ice Age ended as recently as 1850. Therefore, it is no surprise that we are now experiencing a period of warming.

Warming is far slower than predicted

- The world has warmed significantly less than predicted by IPCC on the basis of modeled anthropogenic forcing. The gap between the real world and the modeled world tells us that we are far from understanding climate change.

What about the scientists' man-made Global Warming crisis consensus?

2,000+ scientists' World Climate Declaration: THERE IS NO CLIMATE EMERGENCY

Climate policy relies on inadequate models

- Climate models have many shortcomings and are not remotely plausible as global policy tools. They blow up the effect of greenhouse gases such as CO₂. In addition, they ignore the fact that enriching the atmosphere with CO₂ is beneficial.

CO₂ is plant food, the basis of all life on Earth

- CO₂ is not a pollutant. It is essential to all life on Earth. Photosynthesis is a blessing. More CO₂ is beneficial for nature, greening the Earth: additional CO₂ in the air has promoted growth in global plant biomass. It is also good for agriculture, increasing the yields of crops worldwide.

Global warming has not increased natural disasters

- There is no statistical evidence that global warming is intensifying hurricanes, floods, droughts and such natural disasters, or making them more frequent. However, there is ample evidence that CO₂ mitigation measures are as damaging as they are costly.

Climate policy must respect scientific and economic realities

What about the scientists' man-made Global Warming crisis consensus?

2,000+ scientists' World Climate Declaration: THERE IS NO CLIMATE EMERGENCY

- There is no climate emergency. Therefore, there is no cause for panic and alarm. We strongly oppose the harmful and unrealistic net-zero CO₂ policy proposed for 2050. If better approaches emerge, and they certainly will, we have ample time to reflect and re-adapt. The aim of global policy should be 'prosperity for all' by providing reliable and affordable energy at all times. In a prosperous society, men and women are well educated, birth rates are low and people care about their environment.

Epilogue

- The World Climate Declaration (WCD) has brought a large variety of competent scientists together from all over the world*. The considerable knowledge and experience of this group is indispensable in reaching a balanced, dispassionate and competent view of climate change.
- From now onward, the group is going to function as "Global Climate Intelligence Group". The CLINTEL Group will give solicited and unsolicited advice on climate change and energy transition to governments and companies worldwide.
- ** It is not the number of experts but the quality of arguments that counts*

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

The UN COPs 30 years of illusions without results

Climate Change and Energy: World Leaders in Turmoil

"There is no evidence that UN COP meetings and more than \$10 trillion spent on renewables over the last 30 years have affected the climate. The average atmospheric carbon dioxide [concentration](#), which is blamed for global warming, has been rising over the last 50 years without any change to the trend."

United Nations Conferences and Atmospheric CO₂ Rise

Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Net Zero by 2050 is pointless and not achievable

- Net Zero 2050 is pointless. 90% of the CO₂ warming is in the past because the atmosphere is already in a [CO₂-saturated state](#). This is no longer just theoretical; it has now been [observed in nature](#), consistent with the scientific method. Since the IPCC predictions about CO₂ warming have all been wrong, their hypothesis is wrong. Period.
- A Net Zero 2050 is unachievable. A stable, affordable, non-CO₂-emitting power grid cannot be built using today's technologies, unless it is nuclear. Many of the attempted alternatives have significant environmental downsides.
- Net Zero 2050 is unfair. G7 countries have dropped their share of total global emissions from 40% to 21%, while their share of global GDP dropped from 51% to 41%. China went from 14% to 31% of global emissions, while its share of global GDP increased from 3.6% to 17%. And poor countries are paying more for food as crops are turned into biofuels.
- **The WEF introduced Net Zero and the Climate Crisis to control humanity**

If CO₂ is good and the climate always changes, what about fossil fuels plus alternative energy?

REAL SOLUTIONS: FOCUS ON ADAPTATION, RESILIENCE AND PROSPERITY

WHAT SHOULD WE FOCUS ON INSTEAD?

SMARTER PATHS FOR A BETTER FUTURE

ADAPTATION

Build stronger communities, improve infrastructure, and prepare for extreme weather.

RESILIENCE

Support local solutions, diversify resources, and strengthen food and water security.

INNOVATION & TECHNOLOGY

Invest in practical, affordable technologies that improve lives and protect the environment.

PROSPERITY

Encourage affordable energy, economic growth, and opportunities for future generations.

LET'S BUILD A FUTURE THAT'S STRONGER, SAFER AND MORE PROSPEROUS – NOT ONE BASED ON FEAR AND COSTLY TARGETS.

**FOCUS ON SOLUTIONS THAT IMPROVE LIVES TODAY AND BUILD A BETTER TOMORROW.
THAT'S REAL CLIMATE LEADERSHIP.**

If CO₂ is good and climate always changes, what about energy options?

Practical solutions for reliable, cost-effective electricity generation

Affordable, Reliable and Clean: A Scorecard to Assess Competing Energy Sources

- Countries need affordable and reliable energy sources to power their economy, provide prosperous personal living standards and compete with global competitors. They also want to produce and use energy sources in a clean and ecologically healthy environment. These factors are key:
 - 1) **Affordability** ensures consumers can afford the electricity needed for day-to-day lives.
 - 2) **Reliability** ensures electricity is available whenever needed.
 - 3) **Environmental impact/clean** because we all want to be good stewards of our environment
- Seven electrical generation sources. (biomass, coal, hydropower, natural gas, nuclear power, solar power, and wind power()) were analysed and scored based on these factors (**affordable, reliable, and clean energy**) resulted in the following ranking of energy options (lowest score for highest ranking)

• Natural Gas	4
• Nuclear	5
• Hydro	7
• Coal	17
• Solar	18
• Biomass	20
• Wind	24

What are the negative implications of pursuing a carbon-neutral policy?

Reducing fossil fuel usage would negatively impact third-world economy Vijay Jayaraj

Access to fossil fuel energy will greatly help 3rd world economies and lifestyles.

In the developing world, climate activism movements, often bankrolled by foreign non-governmental organizations (NGOs), have stalled critical projects across continents. These efforts ignore the human toll of energy poverty: children studying by candlelight, hospitals without power, and economies stunted by unreliable grids.

First, the developing nations should investigate the funding and motives behind climate activism. Who bankrolls these NGOs? Are their campaigns aligned with national interests, or do they serve foreign agendas?

Greenpeace International, for example, has undertaken protests of power generated by fossil fuels and nuclear reactors and of coal and aluminum mining across India, while half of India suffers from unreliable electricity supplies.

Greenpeace leadership enjoys the comfort of an industrial economy but is asking poor people in the Third World to forgo energy abundance and rely instead on useless wind turbines and solar panels and accept generational poverty for the sake of addressing a fabricated climate emergency.

What are the negative implications of pursuing a carbon-neutral policy?

Reducing fossil fuel usage would negatively impact third-world economy Vijay Jayaraj

Access to fossil fuel energy will greatly help 3rd world economies and lifestyles.

Africa, home to over 600 million people with limited access to electricity, stands at the frontline of energy deprivation. Nigeria, Angola, and Mozambique have vast natural gas reserves, yet face continual opposition from international lobbies.

In the Democratic Republic of Congo, one of the world's poorest countries, the non-profit 350Africa.org coordinated demonstrations against oil and gas exploration, mobilizing hundreds of groups. In Uganda and Tanzania, the \$3.5 billion East African Crude Oil Pipeline (EACOP), a lifeline for regional energy, has faced relentless opposition from groups like StopEACOP.

Second, governments must assert authority over energy policy, curbing local states or municipalities that align with crusades against fossil fuels. Many cities across the developing world have designated themselves as Net-Zero entities under an initiative of the World Economic Forum.

It is exasperating to see cities, still struggling to provide basic services for the health and safety of their citizens, are willing to prioritize foolish opposition to rational energy development. It is even more weird that municipal leaders would align with foreign organizations like the World Economic Forum and the United Nations in opposition to their own national interests.

What are the negative implications of pursuing a carbon-neutral policy?

Reducing fossil fuel usage would negatively impact third-world economy [Vijay Jayaraj](#)

Access to fossil fuel energy will greatly help 3rd world economies and lifestyles.

Third, legal mechanisms should be used to deter frivolous lawsuits and protests.

African nations rich in energy resources could adopt statutes penalizing activism that delays critical infrastructure without evidence of harm, mirroring the U.S. Attorney General's mandate to challenge unconstitutional state and local laws. Such measures would shift the burden onto activists to justify their claims, rather than paralyzing projects by default.

Energy security is national security, and no ideology should usurp that. From Nigeria's oil fields to India's coal mines, national leaders must dismantle efforts to stymie sensible energy use and clear a path for energy abundance and the eradication of poverty.

This commentary was first published at [Townhall](#) on April 22, 2025. [Vijay Jayaraj](#) is a Science and Research Associate at the [CO₂ Coalition](#), Arlington, Virginia. He holds an M.S. in environmental sciences from the University of East Anglia and a postgraduate degree in energy management from Robert Gordon University, both in the U.K., and a bachelor's in engineering from Anna University, India.

What are the negative implications of pursuing a Carbon Neutral policy?

The cost of going "Carbon Neutral is significant

Global Electricity Price Comparison (Residential)

German household electricity prices are among the highest in the world, averaging around \$0.38 to \$0.40 (USD) per kilowatt-hour. This is significantly higher than the global average of roughly \$0.15/kWh, making Germany the second most expensive country in the G20 and one of the priciest in Europe.

[1](#), **Germany's household power prices 5th highest in the world – report**

[2](#), **Top 20 countries with highest electricity prices**

[3](#), **Expensive German electricity**

[4](#) **Germany is a leader in renewables, so why does it have one of the highest EU electricity prices?**

While many developing nations heavily subsidize their energy, European countries (and island territories) tend to top the charts due to heavy grid investments, geopolitical policy decisions and heavy taxation. [\[1\]](#)

Global Average: \$0.15/kWh

Germany: \$0.38 - \$0.40/kWh

United States: ~\$0.16/kWh

France: ~\$0.29/kWh

United Kingdom: ~\$0.34/kWh

India: ~\$0.07/kWh

Saudi Arabia: ~\$0.05/kWh

What are the negative implications of pursuing a Carbon Neutral policy?

Real Environmental Crisis is not climate Change Vijay Jayaraj

Real Environmental Crisis Is Not Climate Change

- The real environmental emergency isn't the modest warming that has helped humans thrive. It's land degradation, poisoned water and other forms of pollution.
- While [our children drink poisoned water](#), our governments divert precious financial resources, energy and administrative bandwidth toward fighting a ghost. Billions allocated to renewable energy transition in poor countries translates into delayed investment in wastewater treatment, sanitation systems and waste management technology.
- The climate scare is a luxury adventure for the rich. For most, the fight is for clean water, breathable air and the dignity of a life free from filth.
- The abstract, [unscientific](#), and profitable carbon targets tailor-made for multi-billion-dollar corporations is not going to save the Global South from the suffocating effect of real pollution.
- The longer developing nations remain entranced by climate virtue signalling, the longer they defer the genuine environmental remediation their populations deserve.

[Real Environmental Crisis Is Not Climate Change - CO₂ ...](#)

What are the negative implications of pursuing a Carbon Neutral policy?

Are scientists, institutions, activists and NGOs contributing to climate misinformation?

Conformance pressures are real in the media, governments, corporations, NGOs, schools and the public

Possible factors: A Self-Reinforcing Alignment of Perspectives and Interests.

- 1) **The Media:** As the age of the internet advances, headlines become more provocative to encourage clicks. The general lack of knowledge of what the science actually says, the drama of extreme weather events and their heart-wrenching impact on people and pressure within the industry all work against a balanced coverage in popular media
- 2) **Politicians:** Politicians win elections by arousing passion and commitment from voters – by motivating and persuading. The threat of climate catastrophe resonates with everyone. Politicians declare the science is settled and label anyone who questions that “a denier”
- 3) **Scientific Institutions:** When it comes to climate, institutions frequently seem more concerned with making the science fit the narrative than ensuring the narrative fits the science. Assessment reports often summarize or describe the data in ways that are misleading. Scientific institutions have been willing to persuade rather than inform.
- 4) **Scientists:** For academics, pressure occurs to secure funding through grants, plus the matter of promotion and tenure, plus peer pressure.
- 5) **Activists and NGOs:** Have built organizations based on “climate emergency” that rely on donations to exist, making claims that climate change is one of the most devastating problems that humanity has ever faced.
- 6) **The Public:** Concerns about climate change are as old as humanity. Public attitudes mostly involve unquestioning acceptance of wisdom handed down from on high and do not have the time or ability to examine the science themselves. Getting information from social media can also be misleading.

What are the negative implications of pursuing a Carbon Neutral policy?

Climate CO2 Hoax: How Individuals are Hijacked by the Environmental Movement by Lucy Biggers

An [explanation](#) about what is happening to our younger generations, by Lucy Biggers...
(Note: her [Substack article](#) has a short video to go along with each of her three points.)

Step 1: Deconstruct your identity.

- When I entered a newsroom at 25, this was the pervasive ideology: The world is divided into two groups—the oppressed and the oppressors.
- If you are white, straight, privileged, or American, you are inherently an oppressor. Everything you grew up believing is wrong or evil. You cannot be trusted to see the world as it really is because you are inherently racist, biased, and part of the oppressor class.
- I was young, excited to be there, and surrounded by people I thought were smarter and cooler than I was. So I absorbed their worldview and ceded my judgment to the group.
- Once you are demoralised, feel guilty for being an oppressor, can no longer trust your own intuition, or your own interpretation of the facts, you will believe whatever the group tells you to believe.

[How I Was Brainwashed Into Becoming a Biased Climate Reporter](#)

What are the negative implications of pursuing a Carbon Neutral policy?

Climate CO2 Hoax: How Individuals are Hijacked by the Environmental Movement by Lucy Biggers

Step 2: Atone for your sins.

- Because you are an oppressor all you can do is atone for the sins of your birth. You can do that by repeating and advancing the group's ideology. You never question it, because questioning the ideology is treated as proof that you are racist, selfish, or an oppressor.
- For me, this manifested as becoming a climate reporter. Through my work I could help the downtrodden, the indigenous people and other marginalized groups. I could be a good ally.
- And so without questioning, I pushed the idea that climate change was an existential crisis, fossil-fuel companies were evil, capitalism was destroying the planet, and America was an imperialist country that had destroyed the environment. Essentially all of the problems we faced were because of Western imperialism.
- If I had any doubts about this way of thinking I would shut them down. Who was I to question any of it? I was just some *stupid, privileged white girl who didn't know anything*. That was what I had been told about myself and that is what I believed. Better to go along with the group, keep my head down, and be a good ally.

[How I Was Brainwashed Into Becoming a Biased Climate Reporter](#)

What are the negative implications of pursuing a Carbon Neutral policy?

Climate CO2 Hoax: How Individuals are Hijacked by the Environmental Movement by Lucy Biggers

Step 3: Fully submit to the ideology.

- The West is evil. America is evil. Capitalism is evil. White people are evil. Everything you grew up believing is wrong. The only way to fix the world is to tear these systems down.
- The weird thing is that I fell for all of this from a place of compassion. I wanted to help the downtrodden. I wanted to solve inequality. I wanted to fix the world.
- I thought that by giving up my personal agency to this ideology, I was playing my part in atoning for the sins of my birth.
- I believe what I went through (and how thoroughly my sense of self was deconstructed) is still incredibly relevant today. It helps explain the DSA's growing power within the Democratic Party. Why most Democrats can't bring themselves to condemn socialism. Why so many young people believe America deserved 9/11. Why young people and celebrities chant "Free Palestine" without understanding that Hamas is a terrorist organization or anything about the conflict. They've been told what to believe and who the oppressor is in each of these situations.
- Ten years of cancel culture has taught people that questioning the ideology doesn't simply mean you disagree. It means you are an evil oppressor. You are racist, sexist, privileged, out of touch, evil. Disagree and you will be cast out and lose everything.
- Once people become afraid to trust themselves, examine the facts, or stand against the group, you've got them. They can be convinced to believe and do anything.

What are the negative implications of pursuing a Carbon Neutral policy?

The cost of going "Carbon Neutral is significant: Recent legal USA action

A US court case could upend climate change policy

- At the centre of the case is the CO₂ Coalition, a U.S.-based nonprofit group of more than 200 scientists and researchers. The organization focuses on carbon dioxide's role in plant growth, agriculture and ecosystems. It argues that higher CO₂ levels contribute to increased plant productivity and that carbon emissions produce global greening far more than global warming. That position is now at the centre of the case.
- On March 20, the coalition applied for intervenor status, which would allow it to present evidence directly to the court. Executive director Gregory Wrightstone said the scientific basis for the endangerment finding is "weaker than previously believed and contradicted by empirical data, peer-reviewed studies and research." He argues carbon dioxide is not a toxin and that rising CO₂ levels have produced measurable environmental benefits.

What about the scientists' man-made Global Warming crisis consensus?

U.S. Environmental Protection Agency overturns Greenhouse Gas Endangerment Finding

U.S. ENVIRONMENTAL PROTECTION AGENCY OVERTURNS GREENHOUSE GAS ENDANGERMENT FINDING

THE SINGLE
LARGEST DEREGULATORY
ACTION IN U.S. HISTORY
— SAVING AMERICANS
OVER **\$1.3 TRILLION!**

WHAT HAPPENED?

FEBRUARY
12
2026

On February 12, 2026, the U.S. Environmental Protection Agency finalized its rescission of the 2009 Greenhouse Gas Endangerment Finding.

THE BASIS OF THE WRONGHEADED
ENDANGERMENT FINDING PUT **IDEOLOGY**
AHEAD OF **SCIENCE!**

RESCINDED!

2009 GREENHOUSE GAS
ENDANGERMENT FINDING

ENDANGERED

WHAT THIS MEANS

Engine and vehicle manufacturers no longer have **ANY** future obligations for the measurement, control, and reporting of GHG emissions for **ANY** highway engine and vehicle—including model years manufactured prior to this final rule.

ACCORDING TO GREGORY WRIGHTSTONE,
EXECUTIVE DIRECTOR OF THE CO₂ COALITION:

“THE RULE HAS BEEN AN **IMPEDIMENT** TO
ECONOMIC GROWTH, A CAUSE OF **RISE**
ENERGY COSTS AND A **DESTROYER** OF MANY
THOUSANDS OF JOBS AT POWER PLANTS,
COAL MINES AND MANUFACTURING FACILITIES.”

“SINCE ITS 2009 ENACTMENT, THE ENDANGERMENT FINDING'S
SCIENTIFIC UNDERPINNINGS HAVE BEEN FOUND TO BE
CONTRADICTED BY EMPIRICAL DATA, PEER-REVIEWED
STUDIES AND RESEARCH.”

THE BENEFITS

SAVES AMERICANS
OVER **\$1.3 TRILLION** ✓

REMOVES A MAJOR
BARRIER TO ECONOMIC
GROWTH ✓

LOWER ENERGY COSTS
FOR FAMILIES AND
BUSINESSES ✓

PROTECTS AND
CREATES THOUSANDS
OF GOOD JOBS ✓

RESTORES COMMON SENSE,
SCIENCE AND FREEDOM
FROM IDEOLOGICAL
REGULATION ✓

**FREEDOM.
PROSPERITY.
COMMON SENSE.**
THAT'S A WIN
FOR AMERICA!

SCIENCE. FACTS. PROSPERITY. AMERICA FIRST.

EPA's Carbon Repeal Saves Billions, Protects Energy Supplies

What are the negative implications of pursuing a Carbon Neutral policy?

The cost of going "Carbon Neutral is significant: Recent USA action

Repeal of Endangerment Finding

- The repeal of the Environmental Protection Agency's Endangerment Finding by Administrator Lee Zeldin is cause for celebration. The basis of this wrongheaded climate regulation puts ideology ahead of science. The rule has been an impediment to economic growth, a cause of rising energy costs and a destroyer of many thousands of jobs at power plants, coal mines and manufacturing facilities.
- Since the 2009 enactment of the Endangerment Finding, its scientific underpinnings have been found to be even weaker than previously believed and contradicted by empirical data, peer-reviewed studies and research. Relying on false computer models and pseudoscience, the Obama EPA erroneously claimed that carbon dioxide and other so-called greenhouse gases threatened to overheat the Earth. The agency disregarded complexities of climate dynamics – from solar cycles to clouds to ocean currents. Also ignored were a mountain of real-world data accumulated over decades and centuries that disproves the finding that the plant food carbon dioxide is a pollutant.
- Rather than an Earth spiralling into man-made climate crises, the facts reveal that ecosystems are thriving and humanity is benefiting from modest warming and more CO₂. Forests are expanding, deserts are shrinking, agricultural productivity is expanding and drought is declining. In short, there is no climate crisis and carbon dioxide is a beneficial gas necessary for life. Statement of Gregory Wrightstone

<https://co2coalition.org/2026/06/10/climate-alarmisms-reset-and-the-policy-reckoning-it-demands/>

What are the negative implications of pursuing a Carbon Neutral policy?

The cost of going “Carbon Neutral is significant

Europe is waking up to the follies of ‘green energy’

- JPMorgan Chase CEO [Jamie Dimon](#) says that Europe has gone from 90 percent of America’s GDP to 65 percent.
- The Wall Street Journal’s front-page story — “[Europe’s Green Energy Rush Slashed Emissions – and Crippled the Economy](#)”. “High-profile, net-zero projects are being postponed or scrapped,” impairing Europe’s ability to attract artificial intelligence and other vital economic drivers and job creators. The “green” energy shift is killing jobs and inflicting cost-of-living shocks.
- Germany now has the developed world’s highest domestic electricity prices. Britain has its highest industrial rates, and Italy isn’t far behind. Average prices for Europe’s heavy industries are twice those in the U.S. Price volatility has risen as the share of renewable electricity generation has [increased to 54 percent](#).
- Although wind and sunlight are free, [harnessing them](#) requires major infrastructure investments, including battery storage for windless and sunless periods. These additional costs are typically hidden behind subsidies and carbon taxes, but the net result is [much higher electricity prices](#), blackouts, and economic disruption.

What are the negative implications of pursuing a Carbon Neutral policy?

The cost of going “Carbon Neutral is significant

Europe is waking up to the follies of ‘green energy’

- Glass, steel, aluminum, petrochemical, and automobile manufacturing, along with other energy-intensive companies and industries, are all shrinking or being exported from Europe to the U.S. or Asia.
- Thousands of high-paying jobs are disappearing. Entire cities and regions are cascading into economic chaos. Families cannot afford proper food and heat. Elderly people often resort to [heating only one room](#) or one floor to reduce heating costs. Welfare and cold-weather support programs are strained to the limit.
- The End Fuel Poverty Coalition estimates that in Britain, living in cold homes caused nearly [5,000 excess deaths](#) during the 2022-2023 winter. People died because they were too cold and weak to survive illnesses, chronic diseases, or poor health.

[Europe is waking up to the follies of ‘green energy’](#) CRAIG RUCKER, OPINION CONTRIBUTOR – THE HILL 01/08/26

[Net zero is killing energy sector, warns union – PressReader](#)

[Net Zero is economic suicide. It must go. | Konstantin Kisin | Facebook](#)

However, “the EU continues to lock itself into ever more ambitious targets (90% CO₂ reduction by 2040 compared to 1990), while eroding its industrial base, deepening its dependence on China, and widening the gap between rhetoric and the reality of global emissions.”

[America’s Irreversible Goodbye to Climate Governance - CO₂ Coalition](#) . [Dr. Samuele Furfari](#) is a professor of energy geopolitics in Brussels and London, a former senior official with the European Commission’s Directorate-General for Energy

[Europe is waking up to the follies of 'green energy'](#) CRAIG RUCKER, OPINION CONTRIBUTOR – THE HILL 01/08/26

this [article](#) about UK elite's collapsing consensus on climate change.

[Peter Clack @PeterDClack](#)

What are the negative implications of pursuing a Carbon Neutral policy?

Countries and Industries are abandoning or reducing Net-Zero commitments

Industries are abandoning their emission-reduction commitments.

- In the USA, Trump's actions include defunding climate boondoggles across federal agencies, pulling the United States out of the Paris climate agreement, withdrawing the United States from dozens of climate-monitoring and wealth-transfer organizations (most importantly the UN Framework Convention on Climate Change), and rescinding the greenhouse gas endangerment finding.
- Other countries and companies around the globe are also reducing actions related to Net-Zero. Some entities are withdrawing from their climate commitments entirely and reembracing fossil fuels. Others are reducing their emission reduction pledges, cutting funding for wind and solar, pushing out the timeline for net zero, acknowledging the continued necessity of fossil fuels, or some combination of the above.
- For example, the UN IPCC recently had its [64th meeting of the science committee](#), at which it failed, once again, to set a date for the production of the next IPCC Assessment report. A coalition including Saudi Arabia, Russia, China, India and Kenya and other nations want the timeline extended as they really don't believe climate change poses an "existential threat" to humanity.
- In another example, the German government will allow citizens to use oil and gas to heat their homes again

What are the negative implications of pursuing a Carbon Neutral policy?

Countries and Industries are abandoning or reducing Net-Zero commitments

Industries are abandoning their emission-reduction commitments.

- Hundreds of banks and other companies began abandoning various UN-sanctioned or -endorsed climate groups setting reporting requirements for carbon dioxide emissions and goals for emission reductions.
- Early in 2025, [big tech companies, fearing a lack of energy for their AI hubs and server farms](#), began to embrace nuclear power, natural gas, and to a lesser extent even coal in some locations. They want whatever is needed to power the burgeoning AI industry and their tech reliably.
- The automobile and power industries have joined the move away from net zero. For example, an article at [Autoblog](#) detailed automobile manufacturers' decisions to scale back dramatically and states: "After years of rapid growth, the electric vehicle boom is hitting turbulence. With demand slowing and incentives fading, at least 18 automakers are now cancelling, delaying, or scaling back EV plans in the U.S., including major brands like Ford, Honda, Nissan, and Volkswagen. ...After growing nearly eightfold between 2019 and 2023 [due to tax incentives and mandates], demand for battery-electric vehicles flattened out last year, then took a dive off a cliff after federal tax credits phased out at the end of September."
- Oil companies and utilities are also reducing their emission-reduction goals and ratcheting back investment in the energy transition in 2025.

What are the negative implications of pursuing a Carbon Neutral policy?

3rd world countries' increases in CO₂ emissions make Canada's reductions irrelevant

SE Asia Coal Power Plants Under Construction 2023

World Coal Consumption by Country

Coal consumption

Coal consumption by country or region, measured in terawatt-hours (TWh).

Data source: Energy Institute - Statistical Review of World Energy (2024)

OurWorldInData.org/fossil-fuels | CC BY

Other 3rd world countries are also increasing coal burning for electricity use to meet energy needs

The International Energy Agency 2022 Coal Report documented that in 2021–22 global coal demand increased 3.2% and for the first time passed 8 billion tons. Coal use in electricity generation is globally at an all-time high.

[Trump's Withdrawal From Collapsing Climate Narrative](#)

What is Canada's situation and the actual impact of going carbon neutral?

Canada going "Carbon Neutral" does not make sense nor add value for money

- Canada's CO₂ emissions are just over 1% of world emissions. Even if CO₂ levels materially impact global temperatures (which is likely not the case), going "Carbon Neutral" for Canada would have only a very minimal world impact, making no difference.
- **The Government of Canada has launched the \$8 billion Net-Zero Accelerator Fund to help large emitters reduce their emissions. Plus, the Government is taxing Canadian citizens via a carbon tax. In 2023-24, the government expects the tax to raise \$5.7 billion. Is this value for money?**
- Based on recent historical trends, in the next 100 years in Canada
 - The impact of temperature changes is likely about 1 ° C (not a concern)
 - Given no material high tide rises over the last **100-plus** years, the impact of sea level rise is also likely not a concern and any potential rise can be managed.
- Is spending valuable taxpayer funds on the planned "Climate Emergency" good value for money?
- Are there better ways to help Canada than by cutting CO₂ emissions and imposing a Carbon tax? Do we want to feel good following a moral imperative that may be wrong, or do we want to effectively spend these funds in areas where funds are desperately needed and make an impact?
- The value of going "Carbon Neutral" should be in serious question. In my aforementioned separate presentation (available on request), warmer temperatures and increased CO₂ are shown to be good, not bad.
- **\$5.7 billion of funds and efforts in the Carbon Neutral initiatives should be directed elsewhere to well-defined and beneficial needs of Canadian residents. The principle of value for money spent should be upheld. The Carbon tax should be dropped.**

What is Canada's situation and the actual impact of going carbon neutral?

Canada going "Carbon Neutral" does not make sense, nor add value for money

- Dr. Richard Lindzen states "Surely, funds allocated to moving Canada to Carbon Neutral can be better spent elsewhere (adding more doctors and nurses, additional education funding"
- "CO₂ is a particularly ridiculous choice for a 'pollutant'; its primary role is as a fertilizer for plant life. Currently, almost all plants are starved of CO₂. Moreover, if we were to remove a bit more than 60% of current CO₂, the consequences would be dire: namely, death by starvation for all animal life."
- "... given the size of the energy sector, any attempt to rebuild it, however unnecessarily and ineffectively, presents immense opportunities for huge short-term profits – opportunities that are obviously tempting and strongly defended. Atop all of this has been the constant Geobellion repetition by the media of climate alarm. And this alarm is accompanied by so-called 'solutions' that deal with something, namely decarbonization, that is, in fact, largely irrelevant to climate change, while imposing great and pointless pain."
- "Indeed, rapid CO₂ emission reductions in the UK will have a negligible impact on global warming"
- "... proposed policies are harmful regardless of what one believes about the nature of climate change. My point is that this is doubly true if the underlying premise concerning the role of greenhouse gases is wrong."

Reference: Dr. R Lindzen <https://wattsupwiththat.com/2022/12/04/mit-climate-scientist-dr-richard-lindzen-rejects-climate-change-as-a-quasi-religious-movement-predicated-on-an-absurd-scientific-narrative/>

There are significant challenges for Canada to achieve net zero in a reasonable time.

Global Warming and CO₂

Quote from Thomas Drolet

“Two prevalent myths are damaging our economy and hurting the less fortunate:

- 1) that greenhouse gases, chiefly carbon dioxide, are causing dangerous global warming; and
- 2) that wind and solar can easily replace fossil fuels, nuclear, and hydro in electricity generation.

Both are false yet widely accepted. ”

Stop scaring our children

Thomas S. Drolet has had a 57-year international career in many phases of Energy, including Nuclear Power, Fusion Power, Nuclear Fuel Supply, major projects in Coal, Natural Gas, Distributed Generation, Oil and other Renewables (Geothermal, Hydroelectric, Solar and Biomass). He has advised on a variety of management and energy-associated issues.

[A Generation of Kids Thinks They Have No Future. Science Just ...](#)

Global Warming and CO₂: The Science

Evaluation Results of Eleven Relevant Questions with research pages referenced

1) Is present Global Warming a crisis or a natural phenomenon?

Answer: Global Warming is a natural phenomenon

Present temperature changes are not different from historic temperature changes and the earth is now in one of the coldest periods in its history. There is nothing unusual in today's warming.

2) Are warmer temperatures and higher CO₂ levels causing a climate crisis?

Answer: No, warmer temperatures and CO₂ levels are not causing a climate crisis

Forest fires, hurricanes, tornadoes, heat waves, droughts and other weather-related concerns have not increased with recent higher CO₂ and temperature levels.

3) Are higher CO₂ levels and warmer temperatures good or bad?

Answer: Higher CO₂ and warmer temperatures are good for humans and plants

Plants and crops benefit and grow better with higher CO₂. Mankind has also done better under higher temperatures.

4) Are CO₂ atmosphere levels dangerously high or historically low?

Answer: CO₂ levels are at historically low levels when viewed over geologic time

CO₂ levels have been dropping over the last 150 million years to a recent low of 180 ppm; a further drop of only 30 ppm would have ended all plants and therefore all life on Earth. With mankind's added CO₂ emissions, today's CO₂ level rose to about 415 ppm, which is only 0.0417% of the total atmospheric gas. An optimum level for plants would be between 1,000 to 2,000 ppm, but for humans, serious physiological effects begin above 2,000 ppm.

Global Warming and CO₂: The Science

Evaluation Results of Eleven Relevant Questions with research pages referenced

5) What could have caused changes in CO₂ levels over geologic time?

Answer: Natural events have caused changes in CO₂ over geologic time

Cold oceans and plant life absorb CO₂ and concentrated carbon and CO₂ in limestone, coal, oil and gas deposits. Over geologic time, plate tectonics and volcanoes have added CO₂ at much higher amounts than recent mankind-induced CO₂ emissions and with no negative impact.

6) Is climate change mainly caused by mankind's emissions of CO₂?

Answer: Mankind has increased CO₂ levels, but this is not causing major climate change

Temperatures and climate changed dramatically and well before mankind's recently added CO₂ emissions. Rates of recent temperature increases, glacial retreats and sea level rise have not changed with recent increases in CO₂. During glaciation periods, CO₂ levels changed after temperature changed and therefore could not be causing these specific temperature increases. Oceans cool then absorb CO₂; oceans warm, then release CO₂. NASA states that climate change occurs because of changes in the Earth's solar orbit.

7) What is the impact of CO₂ on climate warming?

Answer: Additional CO₂ will have a very minimal future impact on temperature

Mankind added CO₂ has had an impact on temperatures but likely a minor impact overall. Major factors that impact weather and climate include Sun intensity (day and night, seasons), Sun spot activity, ocean currents, clouds, plate tectonics and volcanoes. As CO₂ concentration increases, CO₂ has less and less warming effect; adding more CO₂ has a logarithmically reduced impact.

Global Warming and CO₂: The Science

Evaluation Results of Eleven Relevant Questions with research pages referenced

8) Is sea level rise and rate of rise unusual and a major concern?

Answer: Sea level rise has not changed with higher CO₂, isn't unusual and is manageable

Sea levels have changed significantly over the Earth's entire history. Since the last glacial period, the earlier rapid rate of sea level rise has recently reduced as the majority of land ice has already melted. Societies can adapt to the present rate of sea level rise (about 20 cm per 100 years) by implementing managed retreats, accommodating coastal change and protection with sea walls, dune rehabilitation and beach nourishment. There is no evidence that reducing our CO₂ emissions will reduce sea level rise or materially impact temperature.

9) What about scientists' consensus regarding man-made Global Warming crisis?

Answer: The stated scientific consensus is false; many reputable scientists disagree

There is consensus that temperatures have been and are increasing and that mankind has increased CO₂ levels. However, there is no consensus regarding the degree to which mankind's CO₂ emissions are impacting temperatures or that this is causing a climate crisis.

10) If CO₂ is good and the climate always changes, what about other fossil fuel pollutants and alternative energy adoption?

Answer: Focus on removing the actual pollutants at refinery levels, engine combustion process levels and at coal burning sites for electricity plants – pursue economic, realistic energy transition replacement options, like small nuclear reactors, over time

11) What are the negative implications of pursuing a carbon-neutral policy?

Answer: Overall energy supply, plant life, 3rd world economies and their ability to improve, animal life and the environment (land use, etc.) are all negatively impacted.

The data supporting these findings can be seen, by questions

Global Warming and CO₂: Conclusion

NET ZERO IS NOT THE ANSWER
Our time, money, and energy can, and should, be better spent elsewhere

THE CURRENT PATH: EXPENSIVE AND RESTRICTIVE

IS THIS THE ONLY WAY?

NET ZERO TARGET

- ELECTRIC VEHICLES MANDATES
- RESTRICTIONS AND BANS
- COMPLICATED BUREAUCRACY
- HIGH COSTS FOR HOUSEHOLDS
- DIVERTING PUBLIC FUNDS

PUBLIC FUNDS

A BETTER FOCUS: PRACTICAL, LOCAL PRIORITIES

- HOSPITALS AND PUBLIC SERVICES**
Strong local services that people rely on.
- BETTER ROADS AND INFRASTRUCTURE**
Safe, reliable and fit for the future.
- SUPPORT LOCAL BUSINESS AND JOBS**
A stronger local economy, more opportunities.
- RELIABLE, AFFORDABLE ENERGY FOR ALL**
Secure energy at a price people can afford.
- PROTECT WHAT MATTERS**
Take care of our environment in sensible and practical ways.

WE CAN FOCUS ON PRACTICAL, LOCAL SOLUTIONS THAT IMPROVE LIVES TODAY.

REAL SOLUTIONS FOCUS ON PEOPLE, PROSPERITY AND PRACTICAL PRIORITIES THAT MAKE A REAL DIFFERENCE.

LET'S CHOOSE WISELY, LET'S BUILD A STRONGER SOCIETY

Research Findings

Questions and Findings from Dr. Les Hatton

- 1) Is the current temperature rise of around 1 degree C per century unprecedented?

Answer: No. The last interglacial contained comparable rises and falls on over 250 occasions in the last 200,000 years and changes of twice this amount on 18 occasions.

- 2) Has the earth been significantly warmer in the recent past?

Answer: Yes, in the last interglacial and it had nothing to do with anthropogenic effects.

- 3) Do we have a climate catastrophe or emergency?

Answer: No. Given the number of times this has happened in the recent geological past without any help from us, it seems likely that the climate will be fine as it always has been. The current era is relatively cold and low in atmospheric CO₂, even with our efforts.

- 4) Will life be OK if there is a several degrees C rise in temperature?

Answer: Yes, because it has been before when we were much less technologically capable many years ago, the temperature climbed by 2.05 degrees C in one century and then fell by 2.41 degrees C the following century. It has however, been much more threatened by temperature falls and the ensuing ice ages in the 800,000 years, as evidenced in the Vostok ice cores.

Les Hatton Ph.D. is a mostly retired mathematician, geophysicist and computer scientist who started his career in numerical weather prediction and climatology

Research Findings

Biography of Graeme Phipps compiler of this presentation material

- A professional Geophysicist/Geologist and director of 2 oil and gas companies with over 50 years experience in the International oil and gas industry. Graeme has spent 21 years as director of various companies (11 different Boards, 7 public, with roles on Audit, Reserves, Compensation, Corporate Governance, EH&S and Special Committees plus being Chairman of one public company, plus the principal of Phipps and Associates – an oil and gas consulting firm). Graeme was President of CEP International/PetroKamchatka Plc./East Siberian Plc. (2007 – 2020). In 2005, Executive VP of PetroKazakhstan to become President and CEO which was successfully sold for \$4.2B in late 2005. Exploration and International VP for Petro-Canada (2001 -2002) and VP Corporate Planning and VP Canadian Division for Nexen (1994 -2001). Graeme spent his first 20 years (1974 -1994) with Esso Resources and Exxon in technical, operational and management roles.
- Oil and gas experience in the Western Canada Basin, the Beaufort Sea area, the Arctic Islands and off the East Coast in Canada, the Gulf of Mexico USA, Yeman, North Africa, Romania, China, Gambia, Australia, Malaysia, Indonesia, Nicaragua, UK North Sea, Kazakhstan, Russia.
- Consulting and advisory experience (2002 – present) as the principal of Phipps and Associates, an Oil and Gas Executive Management consulting company, plus 5 years experience in Corporate planning: three years as VP Corporate Planning and Business Development at Nexen and two years with Exxon in their NY head office.
- Presently a director Tundra Oil and Gas Ltd and Buried Hill Serdar Ltd. and recently was a member of the Public Accounts Committee, Government of Jersey

Amicus brief:

7. [Three top scientists briefed the judge on climate science](#), in the 2018 *Calif v. BP* lawsuit. It was educational for him, and it probably will be for you, too.

Physics & geophysics:

8. The warming effect of CO₂ and other so-called “greenhouse gases” is through what is called “[radiative forcing](#).” For an excellent discussion of it I recommend this [2014 UNC Physics Colloquium](#) by Princeton atmospheric physicist Prof. Will Happer.

9. Wilson, 2012, [Simple model to estimate the contribution of atmospheric CO₂ to the Earth's greenhouse effect](#).

10. Pierrehumbert, 2011, [Infrared radiation and planetary temperature](#) (and [discussion](#)).

11. In 2014, the [American Physical Society](#) held a seven hour long “[Climate Change Statement Review Workshop](#),” in which a panel of leading climate experts discussed the science of climate change, including a lot of discussion of [climate sensitivity](#). The [transcript](#) is a daunting 573 pages long, but that's double-spaced and only about 135 words per page, and it is very educational.

Global Warming and CO₂

Reference Material Source David Burton

How much warming are we talking about, anyhow?

The WMO estimates that since the "pre-industrial" mid-to-late-1800s (late Little Ice Age) the Earth has warmed an average of 1.15±0.13 °C. So, what is the significance of that?

12. 1°C is the temperature change you get from an [elevation change of about 500 feet](#).
13. At mid-latitudes, 1°C is about the temperature change from a [latitude change of about 60 miles](#).
14. 1°C is less than the [hysteresis](#) (a/k/a "dead zone" or "dead band") in your home thermostat, which is probably 2-3°F. Your home's "constant" indoor temperatures are continually fluctuating that much, and you probably don't even notice it.
15. In the American Midwest, farmers can fully compensate for 1°C of climate change by adjusting planting dates by [about six days](#).
16. Growing ranges for most important crops include [climate zones](#) with average temperatures that vary by tens of °C. Major crops like corn, wheat, potatoes and soybeans are produced [from Mexico to Canada](#). Compared to that, 1°C is negligible.

Sea-level rise has not significantly accelerated:

https://sealevel.info/1612340_Honolulu_thru_2025-04_vs_CO2_annot1.png/

Many sites show no detectable acceleration, and [at some sites sea-level is falling](#). The best studies of large numbers of high-quality coastal sea-level measurement records have reported detecting a negligible average acceleration of [about 0.01mm/yr²](#). If that amount of acceleration were to continue for 150 years, it would add [four inches](#) to sea-level.)

Climate change is not worsening forest fires:

33. The main factors affecting fires are land management and [forestry practices](#).^[2] Contrary to the [shockingly dishonest propaganda](#) from some quarters (like the misnamed factcheck.org site), global warming has negligible impact on wildfires.
34. NASA satellites monitor fires from orbit, and they've [measured a decreasing trend in fires](#). NASA [reports](#) that, "...MODIS [satellite instruments have measured] a decrease in the total number of square kilometers burned each year. Between 2003 and 2019, that number has dropped by roughly 25 percent." The percentage of the globe which burns each year has been [declining since 2002](#). In 2022, the world hit a [new record-low of 2.2% burned area](#).
35. If warmer temperatures significantly worsened fire risks, then in the United States forest fires would mostly occur in the South. But [most large U.S. forest fires have been in the North](#). The [worst forest fire in American history](#) was in chilly [Wisconsin, in October, 1871](#), when CO₂ (estimated from ice cores) was only about 288 ppmv. That one fire [consumed about 1.2 million acres](#), and it is believed to have killed at least 1200 people. Many of them died of hypothermia, while trying to shelter from the fire in the frigid Pestigo River.
- Here are some additional resources on U.S. fires: ^[1] ^[2] ^[3] ^[4] ^[5] ^[6a/6b]

Current temperatures are not unprecedented:

36. Scientists call warm periods, like the current warm period, "[climate optimums](#)." Current globally averaged temperatures are warmer than they've been in hundreds of years, but probably similar to temperatures during earlier climate optimums, like the [Medieval Warm Period](#), the [Roman Warm Period](#), and the [Bronze Age Warm Period](#). Most studies find that current temperatures are [substantially lower](#) than they were during the [Mid-Holocene Climate Optimum](#) [2] [3] [4] [5], and [several degrees below](#) what they were during warmest part of the [Eemian Interglacial](#).

Recent warming has not been unusually rapid:

37. Depending on [which temperature index you choose](#) (graph [source](#)), global temperatures are believed to have been rising at an average rate of between 0.06°C and 0.16°C per decade since 1958 (the start of the Mauna Loa CO₂ measurement record), as atmospheric [CO₂ level](#) rose from 315 ppmv to 421 ppmv. Based on the trends in temperature and CO₂ level, we could expect at most a little over 1°C of additional warming by 2100. That's a small change, and a very slow rate of change, in comparison with past natural changes in the Earth's temperatures. We know from ice core isotope analyses that over the last 100,000 years the Earth has experienced *dozens* of natural "[Dansgaard-Oeschger events](#)" (a/k/a "Greenland interstadials") in which temperatures changed at rates as rapid as [several degrees per decade](#).^{17b}

Global Warming and CO₂

Reference Material

Source David Burton

(*Caveat:* The most rapid changes are seen in Greenland ice cores, but [Greenland's temperature changes](#) tend, in general, to be at least twice as rapid as globally averaged temperature changes, due to “Arctic amplification.”) Those much larger and more rapid (but 100% natural!) temperature changes [are known to](#) have been [globally synchronous](#), though much [less abrupt in the southern hemisphere](#). They persisted for hundreds or (more typically) thousands of years — and nobody knows with certainty why they occurred. Fortunately, those very large, abrupt temperature changes apparently did not cause mass [extinctions](#). Mankind, [polar bears](#), [pikas](#), [coral](#)^[2]^[3]^[4]^[5], and nearly every other existing species of animal and plant all survived those sharp climate changes. That suggests we needn't fear that the current (comparatively slight) warming trend could be catastrophic for them.

What about feedbacks?

38. Dozens of “[feedback mechanisms](#)” affect the Earth's climate. Some are “positive” (amplifying), others are “negative” (attenuating).

[My web page on the topic](#) includes an overview of how feedback systems work, how feedbacks are analyzed, and a comprehensive list of climate feedbacks, both positive and negative.

What about the claimed “97% consensus”?

39. Q: [Is there a 97% consensus](#) for climate alarmism, or [did over 30,000 scientists say global warming is a hoax](#)?

A: Neither. The best evidence is that manmade climate change is real, but modest and benign. The [only consensus](#) is that emissions of so-called “greenhouse gases” (GHGs) help warm the Earth. There's no consensus that it's harmful. A warmer climate is generally beneficial, which is why scientists call periods of warm climate “[climate optimums](#).”

Benefits of rising CO₂ levels

The [peer-reviewed scientific evidence](#) is compelling that the so-called “social cost of carbon” is negative, meaning that CO₂ emissions are net-beneficial rather than harmful ...for deserts & natural ecosystems

40) : [“Greening” the Earth](#). ...and [for agriculture](#):

41. [Carbonic Acid Gas to Fertilize the Air](#), *Scientific American*, Nov. 27, 1920.

42. The [Center for the Study of Carbon Dioxide and Global Change](#) (“CO₂ Science”) is a 501(c) (3) educational charity, dedicated to factual climate science. They maintain a huge and extremely useful [plant growth database](#), which catalogs scientific studies of the effects of varying CO₂ levels on hundreds of plants.

43. [The CO₂ Coalition](#) is another 501(c)(3) educational charity, with a powerhouse board of scientific experts, dedicated to promoting scientific accuracy about the effects of CO₂ emissions. They have a wealth of excellent information, like [this report about a new study showing that the “social cost of carbon” is negative](#). (Note: I am a member. -[DAB](#))
44. [The Global Warming Policy Foundation](#) (GWPF) is a UK educational charity and think tank, with a prestigious [Academic Advisory Council](#), focused on analysis of climate-related public policies and their economic and environmental implications. They've produced a superb series of in-depth [reports](#) (like [this one on The Good News About Carbon Dioxide](#)), shorter [briefing papers](#), [reports](#), [notes](#) and [lectures](#).
45. Increased agricultural productivity and [improved drought resilience](#) due to rising CO₂ level are helping to make [famines increasingly rare](#), for the first time in human history (see [bar chart](#)). That's a very, very Big Deal. Famine used to be a scourge comparable to war and epidemic. For comparison: COVID-19 has killed about 0.1% of the world's population (so far), WWII killed 2.7% of the world's population, and the catastrophic 1918 flu pandemic killed about 2%. But the [nearly-worldwide drought and famine of 1876-78](#) killed about 3.7% of the world's population!
46. One of the [fathers of modern climatology](#) was the great Swedish scientist and Nobel laureate, Svante Arrhenius. He was the first person to quantify the warming effect of

Global Warming and CO₂
