Calling All High School Graduates!!

We are so proud of our future Spring 2025 High School Graduates!

In preparation for those planning to attend college or the military, we recommend attaining the Meningitis B Vaccine.

This vaccine protects against Meningococcal Disease, a serious illness caused by Neisseria Meningitidis.

Vaccination is recommended for adolescents and young adults aged 16-23 years. The Meningitis B vaccine is recommended in 2 doses, 6 months apart. Schedule your first dose today!

Measles

According to the Georgia Department of Public Health there have been three reported cases of Measles in Metro-Atlanta.

Measles is highly contagious, spreading easily among unvaccinated individuals, and can lead to serious complications, especially in young children.

Nearly all recent cases in the US have occurred in individuals who are not vaccinated, reinforcing the importance of the measles, mumps, and rubella (MMR) vaccine as the best defense.

The CDC recommends all children get two doses of MMR (measles-mumps-rubella) vaccine, starting with the first dose at 12 through 15 months of age, and the second dose at 4 through 6 years of age.

Parents of infants who are not yet eligible for vaccination should take extra precautions to reduce exposure. Click the link below for more information on how to protect your child and prevent the spread of measles in our community.

PAMPA Pediatrics will continue to follow the outlined vaccine schedule according to the Center for Disease Control and Prevention (CDC), and The American Academy of Pediatrics (AAP). Please contact our office for any additional questions.
