198	90	6 3/4	13 1/2	11 1/2	8 1/2	5 1/4
220	100	7	14 1/2	12 1/3	9 1/3	5 2/3

1 cup (250ml - 8 fl oz) = approximately 130 g/4.58 oz

Note: All feeding amounts listed are daily feeding amounts.

AAFCO Statement:

Suitable for All Life Stages including growth of large size dogs (70 lbs or more as an adult).

Additional Information:

Serve dry & have fresh drinking water available at all times. Avoid over feeding. Monitor your dog's weight and reduce or increase feed ration as needed. No supplements or additives required. Store in a clean & dry location.

What Do Those Numbers Mean?

The two numbers represent the Protein and Fat percentages of the food. Inukshuk 26/16 has 26% protein and 16% fat. Our formulas correspond to the increasing needs of dogs as they work harder. This common ingredient base allows the dog to move up or down within the Inukshuk product range without any digestive upset.

Why Does Protein Matter?

Protein has several roles in a dog's body. It provides the energy needed in repairing and building muscle tissues, growing new skin cells, hair, nails, it creates the hormones and enzymes needed to function normally and it keeps their immune system strong. Two of the best sources of protein are chicken and fish, which are key components of Inukshuk Dog Food.

Why Does Fat Matter?

Dogs use fat as their primary source of energy, therefore, it is very important that high energy dogs use food that can meet their needs. Fats are a dense source of energy that is necessary to keeping your pet active and healthy. They help maintain a shiny coat and can prevent skin disorders.
