

MINI PUCK WIRELESS DEVICE INSTALLATION

GPS SOLUTIONS OF AMERICA

PROCESS OF INSTALLATION

Mini Puck Wireless Quick Reference Guide:

- Twist the top of the device off
- Flip the power switch On. It will be located on the side of the device. (Power up can take approximately 5 to 7 minutes to connect to the network)
- Make sure to put the top back on the device, and tightly twist to close securely, to create water resistant seal (device is IP67 rated)
- Label side of the device should be facing down, with no steel covering the top side of the device
- Always check your account online for location accuracy before completing installation process

The Blue arrow is pointing to the power switch.
