ON-SITE SEWAGE SYSTEM

The following pages contain the permit application, as well as other forms that may be required for your permit application. The applications have been inserted into this document from the Ministry of Municipal Affairs and Housing and may be updated from time to time.

Approvals required:

1. If you are doing any new construction or additions to any existing structure you may require **Planning approval**.
2. Other Agency and Township Department approvals. eg. Hydro One, MTO, CN, Bell, Township Public Works Entrance Permit, Township zoning requirements, etc.

Building Permit Process:

1. A sewage system permit application is fully completed including Roll Number.
2. The following plans are required:
 - a. Site plan sketch to scale showing all existing structures & proposed structures and setbacks from the proposed sewage system (with dimensions and setbacks), well(s), drive way, parking area, overhead hydro lines, etc.
 - b. Building plans to scale (2 sets of each) including:
 - i. Floor plans
 - ii. Cross section of proposed sewage system
3. Ensure that the Schedule 1 "Designer" sheet is completed by the qualified individual who designed the sewage system.
4. Required permit fees

Contents:

- Application for a Permit to Construct or Demolish (MMAH application form)
- Schedule 1: Designer Information
- Schedule 2: Sewage System Installer Information
- Schedule 3: Site Evaluation Inspection
- Schedule 4: Sewage System Daily Design Flow
- Schedule 5: Proposal to Construct
- On-Site Sewage System Required Inspections Declaration
- Declaration for Authorized Agent

The Building Services Department can only accept and review complete applications and plans. The review is to ensure that they meet Ontario Building Code, Municipal by-laws and other applicable law.

ON-SITE SEWAGE SYSTEM REQUIRED INSPECTIONS

All inspection requests are to be received at least 2 municipal business days prior to each stage of construction. Next business day inspection requests may be possible if booked by 3:00 p.m. and the schedule allows the inspection.

First Inspection

The first inspection for an on-site sewage system takes place after a complete application for a sewage system permit has been submitted. At this stage, the inspector conducts a site visit to verify the soil classification on which the sewage system design is based. If a fully in-ground bed is being proposed, it is important that two test holes are excavated within the location of the proposed septic bed, each to a depth of five feet.

Base Inspection

The base inspection is not always required; however, it may be included as a condition after the first inspection has been completed and a sewage system permit has been issued. This inspection occurs once the entire bed area has been excavated. At that time, an inspector is called to the site to verify that the soil conditions are suitable for an inground system.

Substantial Inspection

The substantial inspection (second inspection) takes place when the sewage system is substantially complete. At this stage, the inspector will verify the size of the septic tank and inspect the interior through both access lids. If the system includes a pump chamber, it must be equipped with a functioning audible and visual alarm at the time of inspection.

The septic bed must be fully prepared for inspection and must not be covered; all distribution pipes must remain exposed. The inspector will probe the bed to confirm that the required imported soil depths have been achieved. An approved sand analysis from a credible laboratory must be provided at the time of inspection, along with documentation of the quantity of sand installed (e.g., tonnes or cubic yards of filter sand).

The inspector will also measure the length and spacing of the distribution pipes, review all system components, and confirm that all required setbacks have been maintained. Once inspection is complete the inspector will give the go ahead to backfill.

Final

A final inspection takes place once the septic tank and pump chamber lids are at grade, the septic bed has over 60% coverage with shallow-rooted vegetation, and all grading work is complete. After the system passes inspection, the inspector will issue final approval on the sewage system building permit, and the system can then be put into use.

Declaration

I declare that I have an obligation to contact the Building Department, at 705-382-3332 at least two (2) business days in advance of the required construction phase inspections as listed by the Chief Building Official which require an inspection.
