

Dynamic Configurator

For Make to Order & Engineer to Order Manufacturers
NetSuite Native | Built by Manufacturing Experts

WHAT IT DOES

Dynamic Configurator turns a customer's spec into a priced quote, BOM, routing, and work order from a single screen. Built in validators block incompatible options, and pricing updates live as the configuration is built. Sales and engineering work from the same source of truth, so what gets quoted is what gets built. It's a faster, lighter alternative to full CPQ, built natively in NetSuite.

Key Features

RULES ENGINE

- Configure from the line
- Validation logic
- Option dependencies
- Filtered option lists (Adv)

QUOTE TO BUILD

- List, margin, or markup
- Discount pricing
- Real time cost breakdown
- Quote matches build

AUTO BOM

- BOM and routing generated
- Direct work order handoff
- Add new items to source
- Multi level BOMs

BEST FIT

- Make to order
- Complex BOMs & routings
- Rules based products

WHY IT WINS

- NetSuite native build
- Lighter than full CPQ
- Ties into quality
- No third party tools
