

Dynamic Fabrication

For Metal, Steel, Rubber & Fiber Fabricators
NetSuite Native | Built by Manufacturing Experts

WHAT IT DOES

Dynamic Fabrication tracks material by true dimension, not just by each or by weight. Manage width, length, and gauge by lot, create multiple finished outputs from a single piece of raw material, and trace every output and scrap piece back to its source. It's built for fabricators who cut, slit, weld, and combine materials, with lot level costing that standard NetSuite cannot do.

Key Features

DIMENSIONAL

- Length, width, gauge
- Lot tracking
- Allocate by dimension
- Dimensional ATP

CUT & SLIT

- Tooling & die tracking
- Calibration records
- Cut & slit automation
- Nesting & yield

TRACEABILITY

- Multi output runs
- Full scrap traceability
- Lot tied revisions
- True material cost

BEST FIT

- Sales
- Purchasing
- Production
- Accounting

WHY IT WINS

- NetSuite native build
- No third party tools
