

## IHARA SCIENCE

# Dynamic Job Shop Manufacturing Case Study

We know how infuriating it is to invest significant time and money in an ERP system that doesn't work. Ihara lived this with Acumatica. They couldn't ship on time, and their bottom line was hurting as they hemorrhaged cash on custom reporting that still didn't solve their biggest issues.

To solve this major issue, Ihara switched to NetSuite and our Dynamic Job Shop Bundle, a powerful, fully integrated solution built for custom manufacturers, combining quoting, configuration, production, and fabrication workflows inside NetSuite.

### Failed Acumatica Implementation

## \$600K WASTED

- Unable to fulfill orders
- Unable to ship orders
- Large cost overruns
- Constant custom development

### From Acumatica to NetSuite

## 4 MONTHS TO COMPLETE NETSUITE IMPLEMENTATION

- Seamless transition, including system design, configuration, and data migration.
- Supported the Ihara team with user training, go-live, and post-go-live assistance.

### Outcomes with Dynamic Job Shop

- Full shipping & fulfillment operations
- End-to-end visibility across production to order-to-cash
- Custom work order completion with barcode scanning for shop floor of 30+ staff (see image below)

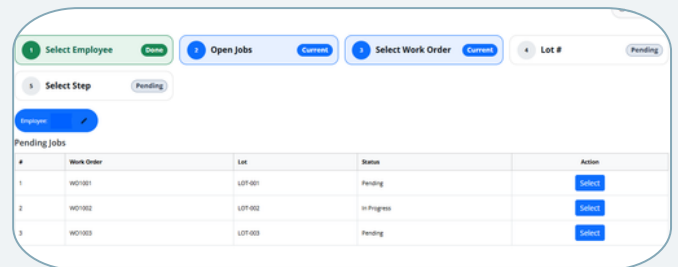

*SuiteDynamics and NetSuite have been a "godsend."*

*"The system is everything we hoped for, thank you to all of you for your hard work."*

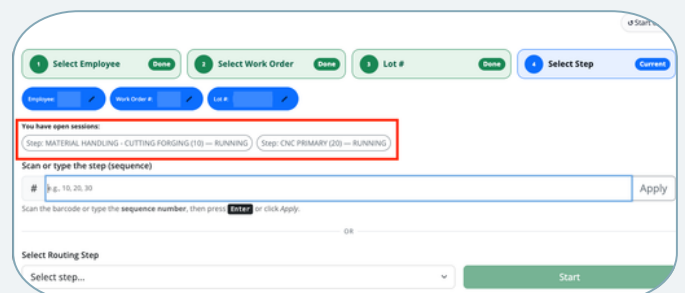

Ready to see how Dynamic Job Shop can transform your manufacturing operations?

Let's talk about your manufacturing challenges.

| # | Work Order | Lot     | Status      | Action |
|---|------------|---------|-------------|--------|
| 1 | WO1001     | LOT-001 | Pending     | Select |
| 2 | WO1002     | LOT-002 | In Progress | Select |
| 3 | WO1003     | LOT-003 | Pending     | Select |

You have open sessions:

- Step: MATERIAL HANDLING - CUTTING FORGING (10) — RUNNING
- Step: CNC PRIMARY (20) — RUNNING

Scan or type the step (sequence)

# 10, 20, 30

Scan the barcode or type the sequence number, then press **Enter** or click **Apply**.
