

Manufacturing Execution, Purpose Built for NetSuite.

Work orders, quality, traceability, and OEE for manufacturers who run NetSuite.

Madison, WI | MES for NetSuite Manufacturers | Built by NetSuite Experts

What is SuiteX?

SuiteX is a manufacturing execution system and native NetSuite extension built for manufacturers. Production teams get digital work orders, live status, labor capture, and quality checks in an interface designed for the floor. Data moves both directions in real time. NetSuite pushes work orders and master data down to SuiteX, and completions, labor, and inspections flow back up as they happen, so the floor and the ERP stay aligned without anyone re-keying anything.

Core Capabilities

Work Order Execution

- Inline editing and status updates
- Parent and child work order views
- Real time production schedules

Operator Data Capture

- Labor and machine time tracking
- Touchscreen and barcode friendly entry
- Operation level commenting and notifications

Quality & Non-Conformance

- Inspection records and quality checkpoints
- Defect tracking and corrective actions
- Automatic audit trails

Traceability & Genealogy

- Lot and serial detail
- Material flow and component history
- Compliance documentation

OEE & Production Analytics

- Throughput, scrap, and on time completion
- Downtime tracking
- Dashboards built on synced production data
