BACTERIA : FUNGI

About

The bacteria : fungi ratio is one of the most powerful indicators of soil biology balance. Bacteria are fast recyclers — decompose simple substrates (sugars, proteins, cellulose). Drive quick nutrient mineralization (N, P, S release). Thrive in disturbed, fertilized, or annual cropping systems. Fungi are slow, structural decomposers — handle lignin, complex carbon. Build soil aggregates (hyphae + glomalin). Key symbionts (AMF) for nutrient and water uptake. Thrive in undisturbed, perennial, organic-matter-rich systems.
