RED CEDAR AGRONOMY

SOYBEAN SEED TREATMENTS

RCA Platinum

LumiGEN Seed Treatments

Foundational seed protection that helps defend seedlings from early-season pests and disease during establishment.

L-120+

A premium inoculant that supports nodulation and nitrogen fixation with extended on-seed stability.

NEXTA™ SHIELD

A nutritional seed treatment that helps soybeans manage early-season stress and maintain growth momentuim.

Victrato®

TYMIRIUM® technology

Protects soybean roots against damaging nematodes and sudden death syndrome, helping preserve yield potential under heavy pest pressure.

ILEVO®

HALF: A reduced-rate treatment designed for soybean cyst nematode control in fields with variable or lower disease pressure.
FULL: Provides maximum root protection in fields with known soybean cyst nematodes and Sudden Death Syndrome.

Verone®

A biological seed treatment supporting plant growth, bio-nutrition, disease protection, and nematode control. Helps enhance early root development and complements other seed treatments.

BLUEPRINT™

Beneficial mycorrhizal fungi extend root reach, improving access to phosphorus, micronutrients, and water for stronger early growth.

Heads Up®

Plant Protectants Inc.

Reduces white mold incidence and severity by strengthening natural crop defenses. This non-living biological seed treatment promotes season-long systemic disease resistance and complements conventional seed treatments for added protection.

*PRICES LISTED ARE MSRP PER UNIT (1 UNIT = 140K SEEDS)
