

RED CEDAR AGRONOMY

SOYBEAN SEED TREATMENTS

BLUEPRINT™

Beneficial mycorrhizal fungi extend root reach, improving access to phosphorus, micronutrients, and water for stronger early growth.

\$12

NEXTA™ SHIELD

A nutritional seed treatment that helps soybeans manage early-season stress and maintain growth momentum.

\$3

Victrato® TYMIRIUM™ technology

Protects soybean roots against damaging nematodes and sudden death syndrome, helping preserve yield potential under heavy pest pressure.

\$15

Verone®

A biological seed treatment supporting plant growth, bio-nutrition, disease protection, and nematode control. Helps enhance early root development and complements other seed treatments.

\$8

ILEVO®

Targeted nutrients help plants tolerate environmental stress, improve nutrient use, and persist through challenging conditions.

\$12
(FULL)
\$7
(HALF)

RCA Platinum

Foundational seed protection that helps defend seedlings from early-season pests and disease during establishment.

\$12

Heads Up® Plant Protectants Inc.

Beneficial mycorrhizal fungi extend root reach, improving access to phosphorus, micronutrients, and water for stronger early growth.

\$10

L-120+

A premium inoculant that supports nodulation and nitrogen fixation with extended on-seed stability.

\$4
