Specifications

Engine Model
MAN B&W 12V25/30

Installation
IOW MP600

Fuel Grade
Marine Diesel Oil (MDO)

Installation

The client aimed to compare the performance of IOW Group's MP600 against their existing Spinner II 3600. For a fair trial, both centrifuges were installed side by side, using the same pump and piping. The MP600 is designed for easy, bolt-on, bolt-off installation, making it a straightforward replacement for older systems. IOW Group also provide remote monitoring as standard, so engineers can check the performance of the IOW MP600 and are notified when a service is required, something Spinner II 3600 do not offer.

Results

- As you can see, the IOW MP600 (left) has removed significantly more soot from the lubrication oil than the Spinner II 3600 (right).
- The Chief onboard the vessel said: "Check out the difference between the new spinner and the old one. Wild! IOW working like a charm!"
