

RSV Vaccine Study

Who may qualify:

- Healthy children 12 months to 30 months old

Compensation:

Enrolled participants may be compensated up to \$3,750 for time and travel for several visits to our clinic over 1-2 years.

This study may determine if an experimental RSV nasal vaccine (delivered to the nose as a spray) is safe and could offer protection against RSV disease. RSV is a common respiratory virus that can be very serious for infants, children and older adults. It is one of the leading causes of hospitalization for infants and children.
