

Customer information on China RoHS

Due to the similarity between the EU RoHS Directive (Restriction of Hazardous Substances) and the “Measures for the Administration of Pollution Control of Electronic Information Products”, which came into force in the People’s Republic of China on 1 March 2007, the latter are often referred to as “China RoHS”.

In terms of content, the Chinese regulations restrict the use of lead, mercury, cadmium, chromium-IV, PBB and PBDE, and are in some respects stricter than the European regulations and there are no exceptions, such as those set out in RoHS Annex III, point 6.

The scope of application primarily covers electronic devices; so-called white goods (small and large household appliances) are not affected. Furthermore, the goods must be intended for Chinese end-users.

Consequently, there is a labelling requirement in form of packaging labelling.

As a supplier of fasteners, we support our customers by providing

- advice on products that do not contain the aforementioned substances
- documentation for our products and necessary information (currently not yet available in Chinese), e.g. factory certificates
- environmentally friendly and sustainable alternatives

Please note that the documents currently available in English and German are not official translations of the original Chinese documents. Only the original Chinese documents are authoritative. This document can therefore only serve as general information on this topic.

For further information and specific advice, please contact the Delegation Office of German Industry in China.
